PZT PowerShares New York AMT-Free Municipal Bond Portfolio

As of June 30, 2015

Fund Description

The PowerShares New York AMT-Free Municipal Bond Portfolio is based on The BofA Merrill Lynch New York Long-Term Core Plus Municipal Securities Index. The Fund generally will invest at least 80% of its total assets in municipal securities that comprise the Index and that also are exempt from the federal alternative minimum tax. The Index is composed of US dollar-denominated, investment grade, tax-exempt debt publicly issued by New York or any US territory, or their political subdivisions, in the US domestic market with a term of at least 15 years remaining to final maturity. The Index is adjusted monthly and its constituents are capitalization-weighted based on their current amount outstanding. The Fund and the Index are rebalanced and reconstituted monthly.

Fund Data

Insured New York Municipal Bond Portfolio	PZT
Intraday NAV (IIV)	PZTIV
CUSIP	73936T458
Listing Exchange	NYSE Arca
Number of Securities	29

Returns less than one year are cumulative. Performance data quoted represents past performance. Past performance is not a guarantee of future results; current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and Shares, when redeemed, may be worth more or less than their original cost. See invescopowershares.com to find the most recent month-end performance numbers. After Tax Held represents total return after taxes on distributions and assumes Shares have not been sold. After Tax Sold represents total return after taxes on distributions and the sale of Fund Shares. After-tax returns reflect the highest federal income tax rate but exclude state and local taxes. Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times. Fund performance reflects fee waivers, absent which, performance data quoted would have been lower.

1-Year Index Statistics

	Alpha	Beta	Correlation	Sharpe Ratio	Volatility (%)
BofA Merrill Lynch NY Long-Term Core Plus Muni Securities Index	–	–	–	1.54	2.48
Barclays Municipal Bond 20 Year Index	-0.95	1.14	0.90	2.15	1.96
BofA Merrill Lynch New York Insured Long-Term Core Plus Municipal Securities Index	-0.49	1.13	0.64	2.72	1.41
Barclays Municipal Insured Long 20 Year Index	-1.64	1.12	0.68	3.28	1.51

Alpha, beta and correlation are that of the underlying index.

Fund Inception: Oct. 11, 2007

Index returns do not represent Fund returns. An investor cannot invest directly in an index.

BofA Merrill Lynch New York Long-Term Core Plus Municipal Securities Index* performance prior to 5/29/2009 reflects that of the original Underlying Index, Merrill Lynch New York Insured Long-Term Core Plus Municipal Securities Index. From 5/29/2009 to 7/7/2014, performance reflects that of the previous Underlying Index, BofA Merrill Lynch New York Insured Long-Term Core Plus Municipal Securities Index. From 7/8/2014 forward, performance reflects that of the Underlying Index, BofA Merrill Lynch New York Long-Term Core Plus Municipal Securities Index AND IS NOT INTENDED FOR ANY THIRD PARTY USE.

Neither the underlying Index nor the benchmark indexes charge management fees or brokerage expenses, and no such fees or expenses were deducted from the performance shown; nor do any of the indexes lend securities, and no revenues from securities lending were added to the performance shown. In addition, the results actual investors might have achieved would have differed from those shown because of differences in the timing, amounts of their investments, and fees and expenses associated with an investment in the Fund.

Shares are not FDIC insured, may lose value and have no bank guarantee.

Shares are not individually redeemable and owners of the Shares may acquire those Shares from the Fund and tender those Shares for redemption to the Fund in Creation Unit aggregations only, typically consisting of 50,000 Shares.

Leading the Intelligent ETF Revolution®

About risk

The Fund's use of a representative sampling approach will result in its holding a smaller number of bonds than are in the underlying Index, and may be subject to greater volatility.

There are risks involved with investing in ETFs, including possible loss of money. Shares are not actively managed and are subject to risks similar to those of stocks, including those regarding short selling and margin maintenance requirements. Ordinary brokerage commissions apply. The Fund's return may not match the return of the Underlying Index. The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risk associated with an investment in the Fund.

Fixed-income investments are subject to credit risk of the issuer and the effects of changing interest rates. Interest rate risk refers to the risk that bond prices generally fall as interest rates rise and vice versa. An issuer may be unable to meet interest and/or principal payments, thereby causing its instruments to decrease in value and lowering the issuer's credit rating. Due to anticipated Federal Reserve Board policy changes, there is a risk that interest rates will rise in the near future.

The Fund is non-diversified and may experience greater volatility than a more diversified investment.

Municipal securities are subject to the risk that legislative or economic conditions could affect an issuer's ability to make payments of principal and/ or interest. Municipal insurance doesn't protest against losses in the Fund.

New York's economic problems increase the risk of investing in New York municipal obligations, including the risk of potential issuer default, heightens the risk that the prices of New York municipal obligations, and the Fund's net asset value, will experience greater volatility. See the prospectus for more information.

The Fund currently intends to effect creations and redemptions principally for cash, rather than principally in-kind because of the nature of the Fund's investments. As such, investments in the Fund may be less tax efficient than investments in ETFs that create and redeem in-kind.

There is no guarantee that the Fund's income will be exempt from federal or state income taxes.

Investments focused in a particular industry are subject to greater risk, and are more greatly impacted by market volatility, than more diversified investments.

The **Intraday NAV** is a symbol representing estimated fair value based on the most recent intraday price of underlying assets.**Volatility** is the annualized standard deviation of index returns. **Beta** is a measure of relative risk and the slope of regression. **Sharpe Ratio** is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe Ratio indicates better risk-adjusted performance. **Correlation** indicates the degree to which two investments have historically moved in the same direction and magnitude. **Alpha** is a measure of performance on a risk-adjusted basis. **Credit ratings** are assigned by Nationally Recognized Statistical Rating Organizations based on assessment of the credit worthiness of the underlying bond issuers. The ratings range from AAA (highest) to D (lowest) and are subject to change. Not rated indicates the debtor was not rated, and should not be interpreted as indicating low quality. Futures and other derivatives are not eligible for assigned credit ratings by any NRSRO and are excluded from quality allocations. For more information on rating methodologies, please visit the following NRSRO websites: standardandpoors.com and select "Understanding Ratings" under Rating Resources and moodys.com and select "Rating Methodologies" under Research and Ratings. **Average Yield to Worst** is the lowest of all yield to calls or the yield to maturity. **Effective Duration** is a measure of a bond's sensitivity to interest rate changes that reflects the change in a bond's price given a change in yield. This duration measure is appropriate for bonds with embedded options.The **30-Day SEC Yield** is based on a 30-day period and is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period. The **30-Day SEC Unsubsidized Yield** reflects the 30-day yield if the investment adviser were not waiving all or part of its fee or reimbursing the fund for part of its expenses. Total return would have also been lower in the absence of these temporary reimbursements or waivers.

The BofA Merrill Lynch New York Insured Long-Term Core Municipal Securities Index is designed to track the performance of US dollar-denominated, investmentgrade, insured, tax-exempt debt publicly issued by New York or Puerto Rico or their political subdivisions. The Barclays Municipal Insured Long 20 Year Index and the Barclays Municipal Bond 20 Year Index are unmanaged indexes of insured municipal securities with remaining maturities of 17 to 22 years.
