

Not With Invesco Large Cap Funds

Many pundits and media outlets refer to the 10-year period from 1999-2009 as the lost decade. This statement has been made with good reason, as the S&P 500 Index has been negative and actually lost money during this time.

Invesco Large Cap Funds Delivered During the Lost Decade

Growth of \$10,000 vs. S&P 500 Index, Class A Shares 12/31/99-12/31/09

Performance quoted is past performance and cannot guarantee comparable future results; current performance may be lower or higher. Visit invesco.com/ performance for the most recent month-end performance. Performance figures reflect reinvested distributions and changes in net asset value (NAV). Investment return and principal value will vary so that you may have a gain or a loss when you sell shares. Class A share performance reflects any applicable fee waivers or expense reimbursements. Performance shown at NAV does not include applicable front-end sales charge, which would have reduced performance. Returns less than one year are cumulative; all other performance figures are annualized.

About risk

Below is a list of the funds in this brochure and each funds' applicable risk categories. Please see the detailed listing that follows for a description of each risk.

Funds are subject to the following kinds of investment risk. **Invesco Charter Fund:** foreign securities risk, management risk and cash/cash equivalents risk; **Invesco International Growth Fund:** foreign securities risk, growth investing risk, management risk and developing markets securities risk; **Invesco Van Kampen Comstock Fund:** interest rate risk, futures risk, options risk, small- and medium- sized companies risk, value investing, foreign risks, risks of investing in REITs, risk of using derivative instruments; **Invesco Van Kampen Equity and Income Fund:** income risk, call risk, credit risk, foreign risks, risks of investing in REITs, value investing, risks of derivatives, forward currency contracts, futures risk, options risk; **Invesco Van Kampen Growth and Income Fund:** interest rate risk, foreign securities risk, futures risk, options risk, REIT/real estate risk, value investing risk and derivatives risk.

Cash/Cash Equivalents Risk: Holding cash or cash equivalents may negatively affect performance.

Foreign Securities Risk: The fund's foreign investments may be affected by changes in the foreign country's exchange rates; political and social instability; changes in economic or taxation policies; difficulties when enforcing obligations; decreased liquidity; and increased volatility. Foreign companies may be subject to less regulation resulting in less publicly available information about the companies.

Management Risk: The investment techniques and risk analysis used by the fund's portfolio managers may not produce the desired results.

Credit Risk: The issuer of instruments in which the fund invests may be unable to meet interest and/or principal payments, thereby causing its instruments to decrease in value and lowering the issuer's credit rating.

Growth Investing Risk: Growth stocks tend to be more expensive relative to their earnings or assets compared with other types of stock. As a result, they tend to be more sensitive to changes in their earnings and can be more volatile.

Developing Markets Securities Risk: Securities issued by foreign companies and governments located in developing countries may be affected more negatively by inflation, devaluation of their currencies, higher transaction costs, delays in settlement, adverse political developments, the introduction of capital controls, withholding taxes, nationalization of private assets, expropriation, social unrest, war or lack of timely information than those in developed countries.

REIT/Real Estate Risk: Investments in real-estate related instruments may be affected by economic, legal, cultural, environmental or technological factors that affect property values, rents or occupancies of real estate related to the fund's holdings. Real estate companies, including REITs or similar structures, tend to be small and mid cap companies, and their shares may be more volatile and less liquid. The value of investments in real estate related companies may be affected by the quality of management, the ability to repay loans, the utilization of leverage and financial covenants related thereto, whether the company carries adequate insurance and environmental factors. If a real estate related company defaults, the fund may own real estate directly, which involves the following additional risks: environmental liabilities; difficulty in valuing and selling the real estate; and economic or regulatory changes.

Derivatives Risk: The fund may use enhanced investment techniques such as derivatives. The principal risk of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets. Derivatives are subject to counterparty risk – the risk that the other party will not complete the transaction with the fund.

Interest Rate Risk: Interest rate risk refers to the risk that bond prices generally fall as interest rates rise and vice versa. Islands, under which the fund and the subsidiary, respectively, are organized, could result in the inability of the fund and/or the subsidiary to operate as described in this prospectus and could negatively affect the fund and its shareholders.

Limited Number of Holdings Risk: The fund may invest a large percentage of its assets in a limited number of securities or other instruments, which could negatively affect the value of the fund.

Small- and Mid-Cap Risk: Stocks of small and mid-sized companies tend to be more vulnerable to adverse developments in the above factors and may have little or no operating history or track record of success, and limited product lines, markets, management and financial resources. The securities of small and mid-sized companies may be more volatile due to less market interest and less publicly available information about the issuer. They also may be illiquid or restricted as to resale, or may trade less frequently and in smaller volumes, all of which may cause difficulty when establishing or closing a position at a desirable price.

Value Investing Risk: Value stocks may react differently to issuer, political, market and economic developments than the market as a whole and other types of stocks. Value stocks tend to be inexpensive relative to their earnings or assets compared to other types of stocks and may never realize their full value. Value stocks tend to be currently out-of-favor with many investors.

Futures Risk: A decision as to whether, when and how to use futures involves the exercise of skill and judgment and even a well conceived futures transaction may be unsuccessful because of market behavior or unexpected events.

Options Risk: A decision as to whether, when and how to use options involves the exercise of skill and judgment and even a well conceived option transaction may be unsuccessful because of market behavior or unexpected events. The prices of options can be highly volatile and the use of options can lower total returns.

Income Risk: The ability of the fund's equity securities to generate income generally depends on the earnings and the continuing declaration of dividends by the issuers of such securities. The interest income on debt securities generally is affected by prevailing interest rates, which can vary widely over the short- and long-term. If dividends are reduced or discontinued or interest rates drop, distributions to shareholders from the Fund may drop as well.

Call Risk: If interest rates fall, it is possible that issuers of callable securities held by the fund will call or prepay their securities before their maturity dates. In this event, the proceeds from the called securities would most likely be reinvested by the fund in securities bearing the new, lower interest rates, resulting in a possible decline in the fund's income and distributions to shareholders and termination of any conversion option on convertible securities.

Forward Currency Contracts. The use of forward contracts involves the risk of mismatching the Fund's objectives under a forward contract with the value of securities denominated in a particular currency. Furthermore, such transactions reduce or preclude the opportunity for gain if the value of the currency should move in the direction opposite to the position taken. There is an additional risk to the effect that currency contracts create exposure to currencies in which the Fund's securities are not denominated. Unanticipated changes in currency prices may result in poorer overall performance for the Fund than if it had not entered into such contracts.

NOT FDIC INSURED | MAY LOSE VALUE | NO BANK GUARANTEE

Before investing, investors should carefully read the prospectus and/or summary prospectus and carefully consider the investment objectives, risks, charges and expenses. For this and more complete information about the fund(s), investors should ask their advisers for a prospectus/summary prospectus or visit invesco.com/fundprospectus.
