

PAGG PowerShares Global Agriculture Portfolio

As of June 30, 2017

Fund Description

The PowerShares Global Agriculture Portfolio is based on the NASDAQ OMX Global Agriculture IndexSM. The Fund will normally invest at least 90% of its total assets in securities that comprise the Index and American depositary receipts and global depositary receipts based on the securities in the Index. The Index is designed to measure the overall performance of the most liquid, globally traded companies involved in agriculture and farming-related activities. The Index is computed using the net return, which withholds applicable taxes for non-resident investors. The Index is rebalanced quarterly using a modified, market-cap-weighted methodology. The Fund and the Index are rebalanced quarterly and reconstituted annually with June's rebalance.

Benchmark Index						
MSCI EAFE Index	13.81	20.27	1.15	8.69	1.03	4.94
Fund						
NAV	0.53	9.94	-5.01	-0.77	-	1.58
Market Price	0.98	9.89	-4.93	-0.71	-	1.40

Returns less than one year are cumulative. Performance data quoted represents past performance. Past performance is not a guarantee of future results; current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and Shares, when redeemed, may be worth more or less than their original cost. See powershares.com to find the most recent month-end performance numbers. Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times. Fund performance reflects fee waivers, absent which, performance data quoted would have been lower.

5-Year Index Statistics

	Alpha	Beta	Correlation	Sharpe Ratio	Volatility (%)
NASDAQ OMX Global Agriculture Index	-	-	-	-0.07	12.37
MSCI EAFE Index	-6.40	0.74	0.70	0.73	11.74

Alpha, beta and correlation are that of the underlying index.

Fund Inception: Sept. 18, 2008

Index returns do not represent Fund returns. An investor cannot invest directly in an index.

Neither the underlying Index nor the benchmark indexes charge management fees or brokerage expenses, and no such fees or expenses were deducted from the performance shown; nor do any of the indexes lend securities, and no revenues from securities lending were added to the performance

shown. In addition, the results actual investors might have achieved would have differed from those shown because of differences in the timing, amounts of their investments, and fees and expenses associated with an investment in the Fund.

The MSCI EAFE[®] Index is an unmanaged index considered representative of stocks of Europe, Australasia and the Far East. The index is computed using the net return, which withholds applicable taxes

for non-resident investors.

Shares are not FDIC insured, may lose value and have no bank guarantee.

Shares are not individually redeemable and owners of the Shares may acquire those Shares from the Fund and tender those Shares for redemption to the Fund in Creation Unit aggregations only, typically consisting of 50,000 Shares.

About risk

There are risks involved with investing in ETFs, including possible loss of money. Shares are not actively managed and are subject to risks similar to those of stocks, including those regarding short selling and margin maintenance requirements. Ordinary brokerage commissions apply. The Fund's return may not match the return of the Underlying Index. The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risk associated with an investment in the Fund.

Since publicly traded limited partnerships are a less common form of organizational structure than corporations, limited partnership units may be less liquid than publicly traded common stock.

Tracking stock may decline in value even if the common stock of the larger company increases in value.

Investments focused in a particular industry or sector, such as the agriculture industry are subject to greater risk, and are more greatly impacted by market volatility, than more diversified investments.

The risks of investing in securities of foreign issuers, including emerging market issuers, can include fluctuations in foreign currencies, political and economic instability, and foreign taxation issues.

The Fund is non-diversified and may experience greater volatility than a more diversified investment. Stocks of small and mid-sized companies tend to be more vulnerable to adverse developments, may be more volatile, and may be illiquid or restricted as to resale.

The **Intraday NAV** is a symbol representing estimated fair value based on the most recent intraday price of underlying assets. **Volatility** is the annualized standard deviation of index returns. **Beta** is a measure of relative risk and the slope of regression. **Sharpe Ratio** is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe Ratio indicates better risk-adjusted performance. **Correlation** indicates the degree to which two investments have historically moved in the same direction and magnitude. **Alpha** is a measure of performance on a risk-adjusted basis. **Weighted Harmonic Average Stock Price-to-Earnings Ratio (P/E Ratio)** is the share price divided by earnings per share. It is measured on a 12-month trailing basis. **Weighted Harmonic Average Stock Price-to-Book-Value Ratio (P/B Ratio)** is the ratio of a stock's market price to a company's net asset value. **Weighted Harmonic Average** is a method of calculating an average value that lessens the impact of large outliers and increases the impact of small ones. **Weighted Average Return on Equity** is net income divided by net worth. **Weighted Market Capitalization** is the sum of each underlying securities' market value. The **30-Day SEC Yield** is based on a 30-day period and is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period. The **30-Day SEC Unsubsidized Yield** reflects the 30-day yield if the investment adviser were not waiving all or part of its fee or reimbursing the fund for part of its expenses. Total return would have also been lower in the absence of these temporary reimbursements or waivers.

Typically, security classifications used in calculating

allocation tables are as of the last trading day of the previous month.
