

# PowerShares WilderHill Progressive Energy Portfolio

## As of March 31, 2017

#### **Fund Description**

The PowerShares WilderHill Progressive Energy Portfolio is based on the WilderHill Progressive Energy Index. The Fund will normally invest at least 90% of its total assets in common stocks that comprise the Index. The Index is comprised of companies in transitional energy technologies significant in improving the use of fossil fuels and nuclear power. The Index is composed of companies focused on the following areas: alternative energy, better efficiency, emission reduction, new energy activity, greener utilities, innovative materials and energy storage. The Fund and the Index are rebalanced and reconstituted quarterly.

Returns less than one year are cumulative. Performance data quoted represents past performance. Past performance is not a guarantee of future results; current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and Shares, when redeemed, may be worth more or less than their original cost. See powershares.com to find the most recent month-end performance numbers. Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times. Fund performance reflects fee waivers, absent which, performance data quoted would have been lower.

| 10-Year Index Statistics            |       |      |             |              |                |

|                                     | Alpha | Beta | Correlation | Sharpe Ratio | Volatility (%) |
| WilderHill Progressive Energy Index | -     | -    | _           | 0.03         | 25.37          |
| NASDAQ Composite Index              | -7.97 | 1.23 | 0.86        | 0.49         | 17.78          |

Alpha, beta and correlation are that of the underlying index.

Fund Inception: Oct. 24, 2006

Index returns do not represent Fund returns. An investor cannot invest directly in an index.

NASDAQ Composite Index returns shown are price return.

Neither the underlying Index nor the benchmark indexes charge management fees or brokerage expenses, and no such fees or expenses were

deducted from the performance shown; nor do any of the indexes lend securities, and no revenues from securities lending were added to the performance shown. In addition, the results actual investors might have achieved would have differed from those shown because of differences in the timing, amounts of their investments, and fees and expenses associated with an investment in the Fund.

The NASDAQ Composite Index measures all NASDAQ

domestic and international-based common stocks listed on The Nasdaq Stock Market.

Shares are not FDIC insured, may lose value and have no bank guarantee.

Shares are not individually redeemable and owners of the Shares may acquire those Shares from the Fund and tender those Shares for redemption to the Fund in Creation Unit aggregations only, typically consisting of 50,000 Shares.

#### About risk

There are risks involved with investing in ETFs, including possible loss of money. Shares are not actively managed and are subject to risks similar to those of stocks, including those regarding short selling and margin maintenance requirements. Ordinary brokerage commissions apply. The Fund's return may not match the return of the Underlying Index. The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risk associated with an investment in the Fund.

Investments focused in a particular sector, such as energy, are subject to greater risk, and are more greatly impacted by market volatility, than more diversified investments.

The Intraday NAV is a symbol representing estimated fair value based on the most recent intraday price of underlying assets. Volatility is the annualized standard deviation of index returns. Beta is a measure of relative risk and the slope of regression. Sharpe Ratio is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe Ratio indicates better risk-adjusted performance. Correlation indicates the degree to which two investments have historically moved in the same direction and magnitude. Alpha is a measure of performance on a risk-adjusted basis. Weighted

Harmonic Average Stock Price-to-Earnings Ratio (P/E Ratio) is the share price divided by earnings per share. It is measured on a 12-month trailing basis. Weighted Harmonic Average Stock Price-to-Book-Value Ratio (P/B Ratio) is the ratio of a stock's market price to a company's net asset value. Weighted Harmonic Average is a method of calculating an average value that lessens the impact of large outliers and increases the impact of small ones. Weighted Average Return on Equity is net income divided by net worth. Weighted Market Capitalization is the sum of each underlying securities' market value. The 30-Day SEC Yield is based on a 30-day period and is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period. The 30-Day SEC Unsubsidized Yield reflects the 30-day yield if the investment adviser were not waiving all or part of its fee or reimbursing the fund for part of its expenses. Total return would have also been lower in the absence of these temporary reimbursements or waivers.

Typically, security classifications used in calculating allocation tables are as of the last trading day of the previous month.
