

PSP PowerShares Global Listed Private Equity Portfolio

As of Sept. 30, 2017

Fund Description

The PowerShares Global Listed Private Equity Portfolio is based on the Red Rocks Global Listed Private Equity Index. The Fund will normally invest at least 90% of its total assets in securities, which may include American depositary receipts and global depositary receipts, that comprise the Index. The Index includes securities, ADRs and GDRs of 40 to 75 private equity companies, including business development companies (BDCs), master limited partnerships (MLPs) and other vehicles whose principal business is to invest in, lend capital to or provide services to privately held companies (collectively, listed private equity companies). The Fund and the Index are rebalanced and reconstituted quarterly.

Market Price	22.81	26.84	11.57	14.37	-0.64	-0.13

Returns less than one year are cumulative. Performance data quoted represents past performance. Past performance is not a guarantee of future results; current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and Shares, when redeemed, may be worth more or less than their original cost. See powershares.com to find the most recent month-end performance numbers. Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times. Fund performance reflects fee waivers, absent which, performance data quoted would have been lower.

10-Year Index Statistics

	Alpha	Beta	Correlation	Sharpe Ratio	Volatility (%)
Red Rocks Global Listed Private Equity Index	-	-	-	0.10	25.85
MSCI EAFE Index	2.63	1.27	0.91	0.05	18.58

Alpha, beta and correlation are that of the underlying index.

deducted from the performance shown; nor do any of the indexes lend securities, and no revenues from securities lending were added to the performance shown. In addition, the results actual investors might have achieved would have differed from those shown because of differences in the timing, amounts of their investments, and fees and expenses associated with an investment in the Fund.

The Red Rocks Capital Listed Private Equity Index is comprised of 40 to 60 global publicly traded companies which invest in, lend to, or provide services to privately held companies. The index represents a means of diversified exposure to global private equity firms, as well as the consolidated exposure of the

underlying portfolio investments.

The MSCI EAFE® Index is an unmanaged index considered representative of stocks of Europe, Australasia and the Far East. The index is computed using the net return, which withholds applicable taxes for non-resident investors.

Shares are not FDIC insured, may lose value and have no bank guarantee.

Shares are not individually redeemable and owners of the Shares may acquire those Shares from the Fund and tender those Shares for redemption to the Fund in Creation Unit aggregations only, typically consisting of 50,000 Shares.

About risk

There are risks involved with investing in ETFs, including possible loss of money. Shares are not actively managed and are subject to risks similar to those of stocks, including those regarding short selling and margin maintenance requirements. Ordinary brokerage commissions apply. The Fund's return may not match the return of the Underlying Index. The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risk associated with an investment in the Fund.

Investments focused in a particular industry or sector are subject to greater risk, and are more greatly impacted by market volatility, than more diversified investments.

An MLP is an entity classified as a partnership under the Internal Revenue Code, and whose partnership interests or "units" are traded on exchanges like common stock. Investments in MLPs units are subject to risks inherent in the MLP's structure, including tax and management risks.

Certain risks are inherent when investing in listed private equity companies, such as BDCs, other financial institutions or vehicles whose principal business is to invest in and lend capital to, or provide services to privately held companies. Little public information exists for private and thinly traded companies, and there risk that investors may not be able to make a fully informed investment decisions or that the issuer may default on its payments or declare bankruptcy. BDCs tend to invest in less mature private companies, which involve greater risk than well-established, publicly-traded companies.

A significant portion of the Underlying Index is composed of BDCs or other investment companies. The Fund may not acquire greater than 3% of the total outstanding shares of such companies. As a result, the

Fund would be required to use sampling techniques, which could increase the risk of tracking error.

The risks of investing in securities of foreign issuers can include fluctuations in foreign currencies, political and economic instability, and foreign taxation issues.

Stocks of small and mid-sized companies tend to be more vulnerable to adverse developments, may be more volatile, and may be illiquid or restricted as to resale.

Swaps involve greater risks than direct investments. Swaps are subject to leveraging, liquidity and counterparty risks, and therefore may be difficult to value. Adverse changes in the value or level of the swap can result in gains or losses that are substantially greater than invested, with the potential for unlimited loss.

The **Intraday NAV** is a symbol representing estimated fair value based on the most recent intraday price of underlying assets. **Volatility** is the annualized standard deviation of index returns. **Beta** is a measure of relative risk and the slope of regression. **Sharpe Ratio** is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe Ratio indicates better risk-adjusted performance. **Correlation** indicates the degree to which two investments have historically moved in the same direction and magnitude. **Alpha** is a measure of performance on a risk-adjusted basis. **Weighted Harmonic Average Stock Price-to-Earnings Ratio (P/E Ratio)** is the share price divided by earnings per share. It is measured on a 12-month trailing basis. **Weighted Harmonic Average Stock Price-to-Book-Value Ratio (P/B Ratio)** is the ratio of a stock's market price to a company's net asset value. **Weighted Harmonic Average** is a method of calculating an average value that lessens the impact of large outliers and increases the impact of small ones. **Weighted Average Return on Equity** is net income divided by net worth. **Weighted**

Market Capitalization is the sum of each underlying securities' market value. The **30-Day SEC Yield** is based on a 30-day period and is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period. The **30-Day SEC Unsubsidized Yield** reflects the 30-day yield if the investment adviser were not waiving all or part of its fee or reimbursing the fund for part of its expenses. Total return would have also been lower in the absence of these temporary reimbursements or waivers.

Typically, security classifications used in calculating allocation tables are as of the last trading day of the previous month.

The Global Industry Classification Standard was developed by and is the exclusive property and a service mark of MSCI, Inc. and Standard & Poor's.
