

PFEM PowerShares Fundamental Emerging Markets Local Debt Portfolio

As of Dec. 31, 2014

Fund Description

The PowerShares Fundamental Emerging Markets Local Debt Portfolio is based on the Citi RAFI Bonds Sovereign Emerging Markets Extended Local Currency Index. The Fund generally will invest at least 80% of its total assets in the bonds issued by the national governments of emerging market countries that comprise the Index. The Index measures the performance of local currency bonds issued by the national governments from a set of emerging market countries. The Fund and the Index are reconstituted annually in October and rebalanced monthly.

There are risks involved with investing in ETFs, including possible loss of money. Shares are not actively managed and are subject to risks similar to those of stocks, including those regarding short selling and margin maintenance requirements. Ordinary brokerage commissions apply. The Fund's return may not match the return of the Underlying Index.

Fund Data

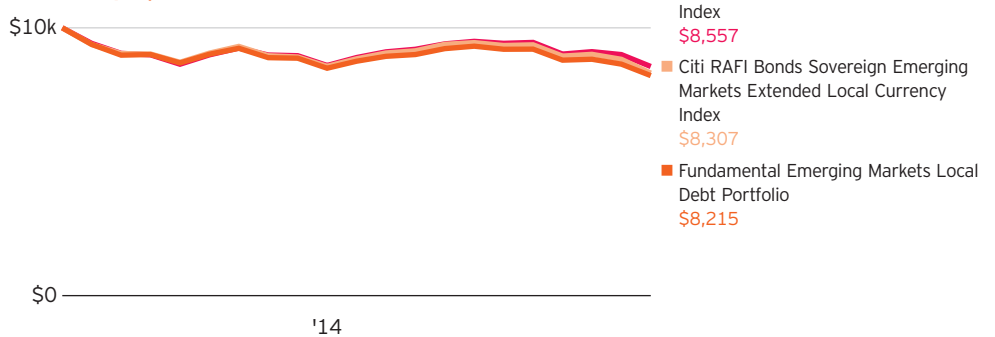

Fundamental Emerging Markets Local Debt Portfolio	PFEM
Intraday NAV (IIV)	PFEMIV
CUSIP	73936Q736

After Tax Held	-9.15	-	-	-	-12.49
After Tax Sold	-4.07	-	-	-	-8.98
Market Price	-1.95	-	-	-	-8.44

Returns less than one year are cumulative. Performance data quoted represents past performance. Past performance is not a guarantee of future results; current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and Shares, when redeemed, may be worth more or less than their original cost. See invescopowershares.com to find the most recent month-end performance numbers. After Tax Held represents total return after taxes on distributions and assumes Shares have not been sold. After Tax Sold represents total return after taxes on distributions and the sale of Fund Shares. After-tax returns reflect the highest federal income tax rate but exclude state and local taxes. Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times. Fund performance reflects fee waivers, absent which, performance data quoted would have been lower.

1-Year Index Statistics

	Alpha	Beta	Correlation	Sharpe Ratio	Volatility (%)
Citi RAFI Bonds Sovereign Emerging Markets Extended Local Currency Index	-	-	-	-0.93	7.25
BofA ML Local Debt Markets Plus Index	-2.02	1.07	0.96	-0.69	6.51

Alpha, beta and correlation are that of the underlying index.

A Smart Beta Portfolio

Fund Inception: May 9, 2013

Index returns do not represent Fund returns. An investor cannot invest directly in an index.

Neither the underlying Index nor the benchmark indexes charge management fees or brokerage expenses, and no such fees or expenses were deducted from the performance shown; nor do any of

the indexes lend securities, and no revenues from securities lending were added to the performance shown. In addition, the results actual investors might have achieved would have differed from those shown because of differences in the timing, amounts of their investments, and fees and expenses associated with an investment in the Fund.

The BofA Merrill Lynch Local Debt Markets Plus Index is designed to track the performance of sovereign debt publicly issued and denominated in the issuer's own

domestic market and currency other than the more established top-tier sovereign markets.

Shares are not FDIC insured, may lose value and have no bank guarantee.

Shares are not individually redeemable and owners of the Shares may acquire those Shares from the Fund and tender those Shares for redemption to the Fund in Creation Unit aggregations only, typically consisting of 50,000 Shares.

About risk

The Fund's underlying securities may be subject to call risk, which may result in the Fund having to reinvest the proceeds at lower interest rates, resulting in a decline in the Fund's income.

The Fund's use of a representative sampling approach will result in its holding a smaller number of bonds than are in the underlying Index, and may be subject to greater volatility.

Investments in fixed-income securities, such as notes and bonds, carry interest rate and credit risk. Interest rate risk refers to the risk that bond prices generally fall as interest rates rise and vice versa. Credit risk is the risk of loss on an investment due to the deterioration of an issuer's financial health. Due to anticipated Federal Reserve Board policy changes, there is a risk that interest rates will rise in the near future.

Liquidity risk exists when a particular investment is difficult to purchase or sell. If the Fund invests in illiquid securities or current portfolio securities become illiquid, it may reduce the returns of the Fund because the Fund may be unable to sell the illiquid securities at an advantageous time or price.

Sovereign debt securities are subject to the additional risk that - under some political, diplomatic, social or economic circumstances - some developing countries that issue lower quality debt securities may be unable or unwilling to make principal or interest payments as they come due. The fund may have limited legal recourse against the issuer and/or guarantor of sovereign debt when default occurs. As a holder of government debt, the Fund may be requested to participate in the rescheduling of such debt and to extend further loans to government debtors.

The Fund will invest in foreign bonds and, because foreign exchanges may be open on days when the Fund does not price its shares, the value of the non-US securities in the Fund's portfolio may change on days when you will not be able to purchase or sell your shares.

The Fund currently intends to effect creations and redemptions principally for cash, rather than principally in-kind because of the nature of the Fund's investments. As such, investments in the Fund may be less tax efficient than investments in ETFs that create and redeem in-kind.

Government obligors in emerging market countries are among the world's largest debtors to commercial banks, other governments, international financial organizations and other financial institutions. The Fund

invests in the bonds of governments located in emerging market countries and much of the income received by the Fund will be in foreign currencies.

Much of the income received by the Fund will be in foreign currencies. Because the Fund's net asset value (NAV) is determined in US dollars, the Fund's NAV could decline if the currency of the non-US markets in which the Fund invests depreciate against the US dollar.

Non-investment grade securities may be subject to greater price volatility due to specific corporate developments, interest-rate sensitivity, negative perceptions of the non-investment grade securities market, adverse economic and competitive industry conditions and decreased market liquidity.

All or a significant portion of the securities in which the Fund will invest will be noninvestment grade securities that are considered speculative.

The United States and the European Union have imposed economic sanctions on certain Russian individuals and entities, and could potentially issue future sanctions. Both the existing and potential future sanctions may result in the decline of the value or liquidity of Russian securities, and therefore may negatively impact the Fund.

The fund may engage in frequent trading of its portfolio securities in connection with the rebalancing or adjustment of the Underlying Index.

The **Intraday NAV** is a symbol representing estimated fair value based on the most recent intraday price of underlying assets. **Volatility** is the annualized standard deviation of index returns.

Sharpe Ratio is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe Ratio indicates better risk-adjusted performance.

Correlation indicates the degree to which two investments have historically moved in the same direction and magnitude. **Alpha** is a measure of performance on a risk-adjusted basis. **Credit ratings** are assigned by Nationally Recognized Statistical Rating Organizations based on assessment of the credit worthiness of the underlying bond issuers.

The ratings range from AAA (highest) to D (lowest) and are subject to change. Not rated indicates the debtor was not rated, and should not be interpreted as indicating low quality. Futures and other derivatives are not eligible for assigned credit ratings by any NRSRO and are excluded from quality allocations. For more information on rating methodologies, please visit the following NRSRO websites: standardandpoors.com and select "Understanding Ratings" under Rating Resources

Fund Country Allocations (%)

Indonesia	9.65
Brazil	9.57
Russia	8.64

South Korea	6.49
Peru	5.09
South Africa	4.98
Malaysia	4.92
Turkey	4.89
Philippines	4.65

and moodys.com and select "Rating Methodologies" under Research and Ratings. **Effective Duration** is a measure of a bond's sensitivity to interest rate changes that reflects the change in a bond's price given a change in yield. This duration measure is appropriate for bonds with embedded options. The **30-Day SEC Yield** is based on a 30-day period and is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period. The **30-Day SEC Unsubsidized Yield** reflects the 30-day yield if the investment adviser were not waiving all or part of its fee or reimbursing the fund for part of its expenses. Total return would have also been lower in the absence of these temporary reimbursements or waivers. **Beta** is a measure of risk representing how a security is expected to respond to general market movements. **Smart Beta** represents an alternative and selection index based methodology that seeks to outperform a benchmark or reduce portfolio risk, or both. Smart beta funds may underperform cap-weighted benchmarks and increase portfolio risk.

Typically, security classifications used in calculating allocation tables are as of the last trading day of the previous month.
