

PICB PowerShares International Corporate Bond Portfolio

As of Dec. 31, 2014

Fund Description

The PowerShares International Corporate Bond Portfolio is based on the S&P International Corporate Bond Index®. The Fund will normally invest at least 80% of its total assets in investment-grade corporate bonds that comprise the Index. The Index measures the performance of investment-grade corporate bonds issued in the following currencies: Australian dollar (AUD), British pound (GBP), Canadian dollar (CAD), euro (EUR), Japanese yen (JPY), Swiss Franc (SFR), New Zealand dollar (NZD), Norwegian krone (NOK) and Swedish krona (SEK). The Index is computed using the net return, which withholds applicable taxes for non-resident investors. The Fund and the Index are rebalanced monthly and reconstituted annually in March.

There are risks involved with investing in ETFs, including possible loss of money. Shares are not actively managed and are subject to risks similar to those of stocks, including those regarding short selling and margin maintenance requirements. Ordinary brokerage commissions apply. The Fund's return may not match the return of the Underlying Index.

Fund Data

International Corporate Bond Portfolio	PICB
Intraday NAV (IIV)	PICBIV
CUSIP	73936Q835
Listing Exchange	NYSE Arca

Market Price	-1.38	5.41	-	-	6.09

Returns less than one year are cumulative. Performance data quoted represents past performance. Past performance is not a guarantee of future results; current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and Shares, when redeemed, may be worth more or less than their original cost. See invescopowershares.com to find the most recent month-end performance numbers. After Tax Held represents total return after taxes on distributions and assumes Shares have not been sold. After Tax Sold represents total return after taxes on distributions and the sale of Fund Shares. After-tax returns reflect the highest federal income tax rate but exclude state and local taxes. Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times. Fund performance reflects fee waivers, absent which, performance data quoted would have been lower.

3-Year Index Statistics

	Alpha	Beta	Correlation	Sharpe Ratio	Volatility (%)
S&P International Corporate Bond Index	-	-	-	0.66	7.51
BofA Merrill Lynch Global Broad Market Non-Sovereign ex-USD Index	2.64	1.16	0.97	0.31	6.27

Alpha, beta and correlation are that of the underlying index.

A Smart Beta Portfolio

Fund Inception: June 3, 2010

Index returns do not represent Fund returns. An investor cannot invest directly in an index.

Neither the underlying Index nor the benchmark indexes charge management fees or brokerage expenses, and no such fees or expenses were deducted from the performance shown; nor do any of the indexes lend securities, and no revenues from securities lending were added to the performance shown. In addition, the results actual investors might

have achieved would have differed from those shown because of differences in the timing, amounts of their investments, and fees and expenses associated with an investment in the Fund.

The BofA Merrill Lynch Global Broad Market Non-Sovereign ex-USD Index tracks the performance of investment-grade non-sovereign debt publicly issued in the major domestic and Eurobond markets.

The S&P International Corporate Bond Index® measures the performance of investment-grade corporate bonds issued in the following currencies of: Australian dollar (AUD), British pound (GBP), Canadian

dollar (CAD), euro (EUR), Japanese yen (JPY), Swiss franc (SFR), New Zealand dollar (NZD), Norwegian krone (NOK) and Swedish krona (SEK). The index is computed using the gross return, which does not withhold applicable taxes for non-resident investors.

Shares are not FDIC insured, may lose value and have no bank guarantee.

Shares are not individually redeemable and owners of the Shares may acquire those Shares from the Fund and tender those Shares for redemption to the Fund in Creation Unit aggregations only, typically consisting of 50,000 Shares.

Leading the Intelligent ETF Revolution®

About risk

The Fund's underlying securities may be subject to call risk, which may result in the Fund having to reinvest the proceeds at lower interest rates, resulting in a decline in the Fund's income.

The Fund invests in corporate bonds issued by non-US companies. Much of the income received by the Fund will be in foreign currencies and is subject to the fluctuation of foreign currencies relative to the US dollar. Foreign securities have additional risks, including exchange-rate changes, decreased market liquidity, political instability and taxation by foreign governments.

Unlike most ETFs, the Fund currently intends to effect redemptions partially for cash and partially in-kind. Therefore, an investment in the Fund may be less tax efficient than investments in conventional ETFs.

The Fund's use of a representative sampling approach will result in its holding a smaller number of bonds than are in the underlying Index, and may be subject to greater volatility.

Investments in fixed-income securities, such as notes and bonds, carry interest rate and credit risk. Interest rate risk refers to the risk that bond prices generally fall as interest rates rise and vice versa. Credit risk is the risk of loss on an investment due to the deterioration of an issuer's financial health. Due to anticipated Federal Reserve Board policy changes, there is a risk that interest rates will rise in the near future.

The Fund invests in foreign bonds and, because foreign exchanges may be open on days when the Fund does not price its shares, the value of non-US securities in the Fund's portfolio may change on days when you will not be able to purchase or sell your shares.

The dollar value of the fund's foreign investments will be affected by changes in the exchange rates between the dollar and the currencies in which those investments are traded.

Global bonds are subject to the same risks as other debt issues, notably credit risk, market risk, interest rate risk and liquidity risk. Investments in the securities of non-US issuers involve risks beyond those associated with investments in US securities, including greater market volatility, the availability of less reliable financial information, higher transactional costs,

taxation by foreign governments, decreased market liquidity and political instability.

The **Intraday NAV** is a symbol representing estimated fair value based on the most recent intraday price of underlying assets. **Volatility** is the annualized standard deviation of index returns.

Sharpe Ratio is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe Ratio indicates better risk-adjusted performance.

Correlation indicates the degree to which two investments have historically moved in the same direction and magnitude. **Alpha** is a measure of performance on a risk-adjusted basis. **Credit ratings** are assigned by Nationally Recognized Statistical Rating Organizations based on assessment of the credit worthiness of the underlying bond issuers. The ratings range from AAA (highest) to D (lowest) and are subject to change. Not rated indicates the debtor was not rated, and should not be interpreted as indicating low quality. Futures and other derivatives are not eligible for assigned credit ratings by any NRSRO and are excluded from quality allocations. For more information on rating methodologies, please visit the following NRSRO websites: standardandpoors.com and select "Understanding Ratings" under Rating Resources and moody.com and select "Rating Methodologies" under Research and Ratings. **Average Yield to Worst** is the lowest of all yield to calls or the yield to maturity. **Effective Duration** is a measure of a bond's sensitivity to interest rate changes that reflects the change in a bond's price given a change in yield.

This duration measure is appropriate for bonds with embedded options. The **30-Day SEC Yield** is based on a 30-day period and is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period. The **30-Day SEC Unsubsidized Yield** reflects the 30-day yield if the investment adviser were not waiving all or part of its fee or reimbursing the fund for part of its expenses. Total return would have also been lower in the absence of these temporary reimbursements or waivers. **Beta** is a measure of risk representing how a security is expected to respond to general market movements. **Smart Beta** represents an alternative and selection index based methodology that seeks to outperform a benchmark or reduce portfolio risk, or both. Smart beta funds may underperform cap-
