

PBE PowerShares Dynamic Biotechnology & Genome Portfolio

As of Dec. 31, 2014

Fund Description

The PowerShares Dynamic Biotechnology & Genome Portfolio is based on the Dynamic Biotech & Genome IntellidexSM Index. The Fund will normally invest at least 90% of its total assets in common stocks that comprise the Intellidex. The Intellidex thoroughly evaluates companies based on a variety of investment merit criteria, including price momentum, earnings momentum, quality, management action, and value. The Underlying Intellidex is comprised of common stocks of 30 US biotechnology and genome companies. The Fund and the Index are rebalanced and reconstituted quarterly in February, May, August and November.

There are risks involved with investing in ETFs, including possible loss of money. Shares are not actively managed and are subject to risks similar to those of stocks, including those regarding short selling and margin maintenance requirements. Ordinary brokerage commissions apply. The Fund's return may not match the return of the Underlying Index. Concentrated industry investments involve greater risks than more diversified investments.

Growth of \$10,000

Data beginning Fund inception and ending Dec. 31, 2014. Fund performance shown at NAV.

Fund Performance & Index History (%)

	1 year	3 year	5 year	10 year	Fund Inception
Underlying Index					
Dynamic Biotech & Genome Intellidex Index	36.56	36.70	25.57	-	14.42
Benchmark Index					
S&P Biotech Index	32.78	48.61	32.40	16.87	18.75
Fund					
NAV	36.39	35.98	24.79	-	13.86
After Tax Held	36.03	35.86	24.72	-	13.82
After Tax Sold	20.58	29.07	20.49	-	11.65
Market Price	36.45	36.02	24.80	-	13.86

Returns less than one year are cumulative. Performance data quoted represents past performance. Past performance is not a guarantee of future results; current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and Shares, when redeemed, may be worth more or less than their original cost. See invescopowershares.com to find the most recent month-end performance numbers. After Tax Held represents total return after taxes on distributions and assumes Shares have not been sold. After Tax Sold represents total return after taxes on distributions and the sale of Fund Shares. After-tax returns reflect the highest federal income tax rate but exclude state and local taxes. Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times. Fund performance reflects fee waivers, absent which, performance data quoted would have been lower.

5-Year Index Statistics

	Alpha	Beta	Correlation	Sharpe Ratio	Volatility (%)
Dynamic Biotech & Genome Intellidex Index	-	-	-	1.27	20.09
S&P Biotech Index	-0.01	0.83	0.73	1.83	17.71

Alpha, beta and correlation are that of the underlying index.

A Smart Beta Portfolio

Fund Inception: June 23, 2005

Index returns do not represent Fund returns. An investor cannot invest directly in an index.

Neither the underlying Index nor the benchmark indexes charge management fees or brokerage expenses, and no such fees or expenses were deducted from the performance shown; nor do any of

the indexes lend securities, and no revenues from securities lending were added to the performance shown. In addition, the results actual investors might have achieved would have differed from those shown because of differences in the timing, amounts of their investments, and fees and expenses associated with an investment in the Fund.

The S&P Composite 1500[®] Biotech (S&P Biotech) Index consists of all biotechnology stocks included in

the S&P Composite 1500 Index.

Shares are not FDIC insured, may lose value and have no bank guarantee.

Shares are not individually redeemable and owners of the Shares may acquire those Shares from the Fund and tender those Shares for redemption to the Fund in Creation Unit aggregations only, typically consisting of 50,000 Shares.

Leading the Intelligent ETF Revolution®

About risk

The Fund is considered non-diversified and may be subject to greater risks than a diversified fund.

Equity risk states that the value of equity securities, including common stocks, may fall due to both changes in general economic and political conditions that impact the market as a whole, as well as factors that directly relate to a specific company or industry.

Securities lending involves a risk of loss because the borrower may fail to return the securities in a timely manner or at all. If a Fund is unable to recover the securities loaned, it may sell the collateral and purchase a replacement security in the market. Lending securities entails a risk of loss to the Funds if and to the extent that the market value of the loaned securities increases and the collateral is not increased accordingly.

Investing in securities of small and medium-sized companies may involve greater risk than is customarily associated with investing in large companies.

Investments focused in a particular industry or sector, such as the biotech and genome and pharmaceuticals industries, are subject to greater risk, and are more greatly impacted by market volatility, than more diversified investments.

The **Intraday NAV** is a symbol representing estimated fair value based on the most recent intraday price of underlying assets. **Volatility** is the annualized standard deviation of index returns. **Sharpe Ratio** is a risk-adjusted measure calculated

using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe Ratio indicates better risk-adjusted performance. **Correlation** indicates the degree to which two investments have historically moved in the same direction and magnitude. **Alpha** is a measure of performance on a risk-adjusted basis. **Weighted Harmonic Average Stock Price-to-Earnings Ratio (P/E Ratio)** is the share price divided by earnings per share. It is measured on a 12-month trailing basis. **Weighted Harmonic Average Stock Price-to-Book-Value Ratio (P/B Ratio)** is the ratio of a stock's market price to a company's net asset value. **Weighted Harmonic Average** is a method of calculating an average value that lessens the impact of large outliers and increases the impact of small ones. **Weighted Average Return on Equity** is net income divided by net worth. **Weighted Market Capitalization** is the sum of each underlying securities' market value. The **30-Day SEC Yield** is based on a 30-day period and is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period. The **30-Day SEC Unsubsidized Yield** reflects the 30-day yield if the investment adviser were not waiving all or part of its fee or reimbursing the fund for part of its expenses. Total return would have also been lower in the absence of these temporary reimbursements or waivers. **Beta** is a measure of risk representing how a security is expected to respond to general market movements. **Smart Beta** represents an alternative and selection index based methodology that seeks to outperform a benchmark or reduce portfolio risk, or both. Smart beta funds may underperform cap-

weighted benchmarks and increase portfolio risk.

Typically, security classifications used in calculating allocation tables are as of the last trading day of the previous month.
