

PGJ PowerShares Golden Dragon China Portfolio

As of March 31, 2017

Fund Description

The PowerShares Golden Dragon China Portfolio is based on the NASDAQ Golden Dragon China Index. The Fund generally will invest at least 90% of its total assets in equity securities of companies deriving a majority of their revenues from the People's Republic of China and that comprise the Underlying Index. The Underlying Index is composed of US exchange-listed companies that are headquartered or incorporated in the People's Republic of China. The Fund and the Index are rebalanced and reconstituted quarterly.

NASDAQ Golden Dragon China	HXCX
Index Provider	The NASDAQ OMX Group, Inc.

Growth of \$10,000

Data beginning 10 years prior to the ending date of March 31, 2017. Fund performance shown at NAV.

Fund Performance & Index History (%)

	YTD	1 year	3 year	5 year	10 year	Fund Inception
Underlying Index						
NASDAQ Golden Dragon China Index	18.95	15.57	5.43	11.05	6.76	8.87
Benchmark Index						
FTSE/Xinhua China 25 Index	9.26	17.74	6.29	4.75	4.06	9.27
Fund						
NAV	18.83	15.27	5.15	10.83	6.36	8.38
Market Price	19.10	15.37	5.19	10.89	6.37	8.37

Returns less than one year are cumulative. Performance data quoted represents past performance. Past performance is not a guarantee of future results; current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and Shares, when redeemed, may be worth more or less than their original cost. See powershares.com to find the most recent month-end performance numbers. Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times. Fund performance reflects fee waivers, absent which, performance data quoted would have been lower.

10-Year Index Statistics

	Alpha	Beta	Correlation	Sharpe Ratio	Volatility (%)
NASDAQ Golden Dragon China Index	-	-	-	0.21	29.26
FTSE/Xinhua China 25 Index	3.98	0.86	0.83	0.13	27.98

Alpha, beta and correlation are that of the underlying index.

Fund Inception: Dec. 9, 2004

Index returns do not represent Fund returns. An investor cannot invest directly in an index.

Neither the underlying Index nor the benchmark indexes charge management fees or brokerage expenses, and no such fees or expenses were deducted from the performance shown; nor do any of the indexes lend securities, and no revenues from

securities lending were added to the performance shown. In addition, the results actual investors might have achieved would have differed from those shown because of differences in the timing, amounts of their investments, and fees and expenses associated with an investment in the Fund.

The FTSE/Xinhua China 25 Index is an unmanaged index considered representative of Chinese blue chip

stocks.

Shares are not FDIC insured, may lose value and have no bank guarantee.

Shares are not individually redeemable and owners of the Shares may acquire those Shares from the Fund and tender those Shares for redemption to the Fund in Creation Unit aggregations only, typically consisting of 50,000 Shares.

About risk

There are risks involved with investing in ETFs, including possible loss of money. Shares are not actively managed and are subject to risks similar to those of stocks, including those regarding short selling and margin maintenance requirements. Ordinary brokerage commissions apply. The Fund's return may not match the return of the Underlying Index. The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risk associated with an investment in the Fund.

The Fund is non-diversified and may experience greater volatility than a more diversified investment.

The risks of investing in securities of foreign issuers can include fluctuations in foreign currencies, political and economic instability, and foreign taxation issues.

Stocks of small and mid-sized companies tend to be more vulnerable to adverse developments, may be more volatile, and may be illiquid or restricted as to resale.

Investments focused in a particular sectors, such as consumer discretionary and technology, are subject to greater risk, and are more greatly impacted by market volatility, than more diversified investments.

Investments that derive a majority of their revenues from China are likely to be more volatile than other issuers. China's economy differs, often unfavorably, from the U.S. Historically, the Chinese government has exercised substantial control over virtually every sector of its economy through administrative regulation and/or state ownership; resulting in a substantial effect on its economy. Non-Chinese investors have difficulty access securities in China directly due to investment

and trading restrictions, which may impact the availability, liquidity, and pricing of certain securities.

The **Intraday NAV** is a symbol representing estimated fair value based on the most recent intraday price of underlying assets. **Volatility** is the annualized standard deviation of index returns. **Beta** is a measure of relative risk and the slope of regression. **Sharpe Ratio** is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe Ratio indicates better risk-adjusted performance. **Correlation** indicates the degree to which two investments have historically moved in the same direction and magnitude. **Alpha** is a measure of performance on a risk-adjusted basis. **Weighted Harmonic Average Stock Price-to-Earnings Ratio (P/E Ratio)** is the share price divided by earnings per share. It is measured on a 12-month trailing basis. **Weighted Harmonic Average Stock Price-to-Book-Value Ratio (P/B Ratio)** is the ratio of a stock's market price to a company's net asset value. **Weighted Harmonic Average** is a method of calculating an average value that lessens the impact of large outliers and increases the impact of small ones. **Weighted Average Return on Equity** is net income divided by net worth. **Weighted Market Capitalization** is the sum of each underlying securities' market value. The **30-Day SEC Yield** is based on a 30-day period and is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period. The **30-Day SEC Unsubsidized Yield** reflects the 30-day yield if the investment adviser were not waiving all or part of its fee or reimbursing the fund for part of its expenses. Total return would have also been lower in the absence of these temporary reimbursements or waivers.

Typically, security classifications used in calculating allocation tables are as of the last trading day of the previous month.
