

DBV PowerShares DB G10 Currency Harvest Fund

As of Dec. 31, 2017

Fund Description

The PowerShares DB G10 Currency Harvest Fund seeks to track changes, whether positive or negative, in the level of the Deutsche Bank G10 Currency Future Harvest Index[®] – Excess Return (DB G10 Currency Future Harvest Index ER) plus the interest income from the Fund's holdings of primarily US Treasury securities and money market income less the Fund's expenses. The Fund is designed for investors who want a cost-effective and convenient way to invest in currency futures. The Index is composed of currency futures contracts on certain G10 currencies and is designed to exploit the trend that currencies associated with relatively high interest rates, on average, tend to rise in value relative to currencies associated with relatively low interest rates. The G10 currency universe from which the Index selects currently includes U.S. dollars, euros, Japanese yen, Canadian dollars, Swiss francs, British pounds, Australian dollars, New Zealand dollars, Norwegian krone and Swedish krona. The Fund seeks to track the Index, which is designed to reflect the return from investing up to a 2:1 leveraged basis (immediately upon rebalancing, which may then increase or decrease) in long currency futures positions for certain currencies associated with relatively high yielding interest rates and in short currency futures positions for certain currencies associated with relatively low yielding interest rates. The Fund and the Index are rebalanced and reconstituted quarterly.

This Fund is not suitable for all investors due to the speculative nature of an investment based upon the Fund's trading which takes place in very volatile markets. Because an investment in the Fund is leveraged, even a small movement in the market price of the underlying futures contracts could cause large losses. Please see "About Risk" and the Prospectus for additional risk disclosures.

the Index (DBHVFER). Because the Fund collateralizes its futures positions primarily with US Treasuries, the results of the total return (Deutsche Bank G10 Currency Future Harvest Index[®] – Total Return or DB G10 Currency Future Harvest Index TR) version of the Index (DBHVFTTR) are also displayed. Please see powershares.com for Indicative intra-day NAV and last end-of-day NAV.

The US Dollar Index (USD[®]) provides a general indication of the international value of the USD by averaging the exchange rates between the USD and

the six major world currencies in the Spot Index – Euro, Japanese Yen, British Pound, Canadian Dollar, Swedish Krona and Swiss Franc.

Shares are not FDIC insured, may lose value and have no bank guarantee.

Shares are not individually redeemable and owners of the Shares may acquire those Shares from the Fund and tender those Shares for redemption to the Fund in Creation and Redemption Units aggregations only, typically consisting of 200,000 Shares.

How the Fund Invests and Potential Advantages

The Fund invests in liquid futures contracts trading on regulated exchanges and has the following potential advantages:

- **Enhanced currency index:** The Index is designed to exploit the tendency for currencies associated with higher interest rates to yield greater returns than currencies associated with lower interest rates.
- **Diversification:** Currencies may help to diversify a portfolio because currency returns have tended to exhibit low correlation to stock and bond returns.
- **Ease of investment:** The Fund provides convenient access to the returns of the international currency markets by following a highly-developed index previously available only to very sophisticated investors.
- **Interest earned:** The Fund collateralizes its futures contracts primarily with US T-bills and earns interest on these securities. This interest accrues to the benefit of investors.

About risk

This fund issues a Schedule K-1.

Please review the prospectus for breakeven figures for the Fund.

The value of the Shares of the Fund relate directly to the value of the futures contracts and other assets held by the Fund and any fluctuation in the value of these assets could adversely affect an investment in the Fund's Shares.

The Fund is speculative and involves a high degree of risk. An investor may lose all or substantially all of an investment in the Fund.

Short selling theoretically exposes the Fund to unlimited losses, which may result in the total loss of your investment.

Currencies and futures generally are volatile and are not suitable for all investors.

Investment in foreign exchange related products is subject to many factors that contribute to or increase volatility, such as national debt levels & trade deficits, changes in domestic & foreign interest rates, & investors' expectations concerning interest rates, currency exchange rates & global/regional political, economic/financial events & situations.

The **Intraday NAV** is a symbol representing estimated fair value based on the most recent intraday price of underlying assets. **Volatility** is the annualized standard deviation of index returns. **Beta** is a measure of

relative risk and the slope of regression. **Sharpe Ratio** is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe Ratio indicates better risk-adjusted performance. **Correlation** indicates the degree to which two investments have historically moved in the same direction and magnitude. **Alpha** is a measure of performance on a risk-adjusted basis. **Market returns** are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times.
