

DSUM PowerShares Chinese Yuan Dim Sum Bond Portfolio

As of Dec. 31, 2017

Fund Description

The PowerShares Chinese Yuan Dim Sum Bond Portfolio seeks investment results that generally correspond (before fees and expenses) to the price and yield performance of the Citi Custom Dim Sum (Offshore CNY) Bond Index. The Fund normally will invest at least 80% of its total assets in Chinese Renminbi (RMB)-denominated bonds that comprise the Underlying Index. To qualify for the Underlying Index, a security must have an outstanding principal amount of RMB 1 billion, a minimum of one year to maturity to enter the Index and one month to maturity to remain in the Index. The Underlying Index is composed of RMB-denominated bonds issued by governments, agencies, supranationals and corporations, excluding synthetics, convertible bonds, retail bonds and CDs. The Fund and the Index are rebalanced and reconstituted monthly.

There are risks involved with investing in ETFs, including possible loss of money. Shares are not actively managed and are subject to risks similar to those of stocks, including those regarding short selling and margin maintenance requirements. Ordinary brokerage commissions apply. The Fund's return may not match the return of the Underlying Index. The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risk associated with an investment in the Fund.

Market Price	10.69	1.71	1.99	-	2.19

Returns less than one year are cumulative. Performance data quoted represents past performance. Past performance is not a guarantee of future results; current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and Shares, when redeemed, may be worth more or less than their original cost. See powershares.com to find the most recent month-end performance numbers. Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times. Fund performance reflects fee waivers, absent which, performance data quoted would have been lower.

5-Year Index Statistics

	Alpha	Beta	Correlation	Sharpe Ratio	Volatility (%)
Citi Custom Dim Sum (Offshore CNY) Bond Index	-	-	-	0.57	4.86
Bloomberg Barclays China Aggregate Index	0.83	0.79	0.64	0.64	3.91

Alpha, beta and correlation are that of the underlying index.

shown. In addition, the results actual investors might have achieved would have differed from those shown because of differences in the timing, amounts of their investments, and fees and expenses associated with an investment in the Fund.

The Bloomberg Barclays China Aggregate Index includes fixed-rate securities that are issued in CNY with size above RMB one billion and have a remaining maturity of at least one year. Convertible securities, floating-rate notes, perpetuals, warrants, linked bonds,

structured products and private placements are excluded.

Shares are not FDIC insured, may lose value and have no bank guarantee.

Shares are not individually redeemable and owners of the Shares may acquire those Shares from the Fund and tender those Shares for redemption to the Fund in Creation Unit aggregations only, typically consisting of 50,000 Shares.

About risk

An issuer may be unable to meet interest and/or principal payments, thereby causing its instruments to decrease in value and lowering the issuer's credit rating.

Global bonds are subject to the same risks as other debt issues. Securities of non-U.S. issuers may be subject to greater market volatility based on factors such as availability of reliable financial information, higher transactional costs, taxation, decreased market liquidity and political instability.

The Fund currently intends to effect creations and redemptions principally for cash, rather than principally in-kind because of the nature of the Fund's investments. As such, investments in the Fund may be less tax efficient than investments in ETFs that create and redeem in-kind.

Investments focused in a particular industry are subject to greater risk, and are more greatly impacted by market volatility, than more diversified investments.

The Fund may hold illiquid securities that it may be unable to sell at the preferred time or price and could lose its entire investment in such securities.

Interest rate risk refers to the risk that bond prices generally fall as interest rates rise and vice versa.

The values of securities designed to provide exposure to Chinese RMB, such as RMB-denominated bonds, may change quickly and arbitrarily, potentially impacting the availability, liquidity, and pricing of securities designed to provide offshore investors with exposure to Chinese markets. The Chinese government maintains strict currency controls and regularly intervenes in the currency market.

The Fund invests at least 80% of its assets in Chinese RMB-denominated bonds issued and settled outside of mainland China. If the currency of the non-US market in which the Fund invests depreciates against the US dollar, the fund's NAV could decline, even if the value of the Fund's holdings increases. If the Chinese currencies (the RMB, traded in mainland China, and the Yuan, traded offshore as "CNH" in Hong Kong), diverge in value, that divergence could negatively impact the Fund.

Adverse economic conditions, such as unfavorable or volatile currency exchange rates and interest rates, political events or other conditions may cause the Chinese government to intervene and impose "capital controls," including the prohibition of, or restrictions

on, the ability to transfer currency, securities or other assets.

Issuers of sovereign debt or the governmental authorities that control repayment may be unable or unwilling to repay principal or interest when due, and the Fund may have limited recourse in the event of default. Without debt holder approval, some governmental debtors may be able to reschedule or restructure their debt payments or declare moratoria on payments.

The Fund's use of a representative sampling approach will result in its holding a smaller number of securities than are in the underlying Index, and may be subject to greater volatility.

The **Intraday NAV** is a symbol representing estimated fair value based on the most recent intraday price of underlying assets. **Volatility** is the annualized standard deviation of index returns. **Beta** is a measure of relative risk and the slope of regression. **Sharpe Ratio** is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe Ratio indicates better risk-adjusted performance. **Correlation** indicates the degree to which two investments have historically moved in the same direction and magnitude. **Alpha** is a measure of performance on a risk-adjusted basis. **Credit ratings** are assigned by Nationally Recognized Statistical Rating Organizations based on assessment of the credit worthiness of the underlying bond issuers. The ratings range from AAA (highest) to D (lowest) and are subject to change. Not rated indicates the debtor was not rated, and should not be interpreted as indicating low quality. Futures and other derivatives are not eligible for assigned credit ratings by any NRSRO and are excluded from quality allocations. For more information on rating methodologies, please visit the following NRSRO websites: standardandpoors.com and select "Understanding Ratings" under Rating Resources and moody.com and select "Rating Methodologies" under Research and Ratings. **Average Yield to Worst** is the lowest of all yield to calls or the yield to maturity. **Effective Duration** is a measure of a bond's sensitivity to interest rate changes that reflects the change in a bond's price given a change in yield. This duration measure is appropriate for bonds with embedded options. The **30-Day SEC Yield** is based on a 30-day period and is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period. The **30-Day SEC Unsubsidized Yield**

Annual Index Performance (%)

	Citi Custom Dim Sum (Offshore CNY) Bond Index	Bloomberg Barclays China Aggregate Index
2012	7.87	5.10
2013	6.85	1.33
2014	0.43	8.04
2015	-2.12	3.95
2016	-1.64	-5.17
2017	12.38	6.19

Fund Issuer Type Allocation (%)

Corporate	79.61
Domestic Sovereign	13.92
Agency	4.76
Supranational	1.71

reflects the 30-day yield if the investment adviser were not waiving all or part of its fee or reimbursing the fund for part of its expenses. Total return would have also been lower in the absence of these temporary reimbursements or waivers.
