Risk Indicator

The Risk Indicator is subject to change and is correct based on the data available at the time of publication.

* Calculation is based on current all-in coupon (base rate + spread) and market price of holdings.

** The Management Company has appointed and delegated investment decisions to Invesco Senior Secured Management, Inc. ("the investment Manager"). See prospectus for more information.

† Effective duration is calculated using time (years) to reset for floating rate holdings and effective duration (source: Bloomberg) for fixed rate bonds.

Investment objective

The Sub-Fund aims to provide a high level of current income, consistent with the preservation of capital. The benchmark index is shown for performance comparisons purposes only. The fund is actively managed and does not track the index.

Investment strategy

- The fund invests primarily in adjustable rate senior secured loans denominated in Euro, Sterling, and other European currencies (including but not limited to Norwegian Krone, Swedish Krona, Swiss Franc, and Danish Krone).
- The fund's team seeks loans to companies which, in the judgment of the analyst team, have excellent management teams, consistent and dependable sources of cash flow and reliable collateral packages providing a second source of repayment.
- To manage risk, the team keeps the portfolio broadly diversified and generally avoids industries they believe to be fundamentally flawed or speculative.
- The investment concerns the acquisition of units in an actively managed fund and not in a given underlying asset.

Risk warnings

For complete information on risks, refer to the legal documents. The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested. Senior loans may be illiquid and more difficult to sell quickly at a fair price. Because of the risk of illiquidity of the instruments in which the product will invest, the processing of the redemption requests may be deferred in certain circumstances.

Interest rates on senior loans depend on the level of an underlying rate; as such, they may change and cause fluctuations in the net asset value of the product.

Senior loans are exposed to credit risk which is the ability of the borrower to repay the interest and capital on the scheduled dates.

The product will hold debt instruments which are of lower credit quality and may result in larger fluctuations in the value of the product.
