

A look at the last year

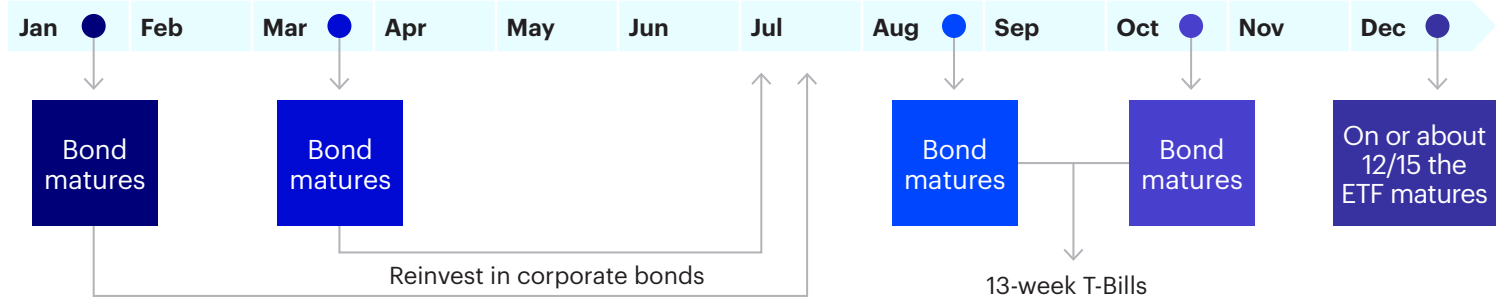

BulletShares® Corporate Bond ETFs maturity process

This marketing communication is for per-se professional investors in Switzerland. Investors should read the legal documents prior to investing.

Proceeds of bonds that mature in the first half of the year are invested in corporate bonds that mature in the second half of the year.

Proceeds of bonds that mature in the second half of the year will be invested into 13-week T-Bills.

2022

For illustrative purposes only.

Case Study: What happened in 2022?

As the bonds approached maturity, their respective durations moved lower, helping to minimize portfolio volatility as indicated by the NAV.

Over the same time period, the weighted average bond price of each fund's portfolio converged toward par (\$100), which did not adversely affect the NAV of the funds. The ETF liquidated on December 15, 2022 with a NAV of \$21.18.

Invesco BulletShares® 2022 Corporate Bond ETF (BSCM)

| Date | 3/31/22 | 6/30/22 | 9/30/22 | 12/31/22 |

Can I reinvest my proceeds into another BulletShares target maturity ETF?

Yes. BulletShares® ETFs provide flexibility and convenience in managing fixed income exposure. As your BulletShares® ETFs mature, you may want to consult with an investment professional and explore having the distribution proceeds invested in a BulletShares® ETF in a subsequent maturity year. BulletShares® offer a variety of maturities ranging from 2023 to 2032 depending on your needs. The list on the back details each of the available BulletShares® ETFs.

The funds do not seek to return any predetermined amount at maturity, and the amount an investor receives may be worth more or less than their original investment. In contrast, when an individual bond matures, an investor typically receives the bond's par (or face value). The funds have designated years of maturity ranging from 2023 to 2032 and will terminate on or about December 15 for the investment grade/high yield. In connection with such termination, each fund will make a cash distribution to then current shareholders of its net assets after making appropriate provisions for any liabilities of the fund. During the final year of maturity, bonds held by the fund's will mature and proceeds will be reinvested cash and cash equivalents, including without limitation U.S. Treasury Bills and investment grade commercial paper for the High Yield Corporate ETFs. The funds will terminate without requiring additional approval by its board or shareholders. The Board may change the termination date to an earlier or later date without shareholder approval if determined the change to be in the best interest of the fund. See the prospectus for more information about the funds' termination.

About Risk: There are risks involved with investing in ETFs, including possible loss of money. Shares are not actively managed and are subject to risks similar to those of stocks, including those regarding short-selling and margin maintenance requirements. Ordinary brokerage commissions apply. The funds' return may not match the return of the underlying index. The funds are subject to certain other risks. Please see the current prospectus for more information regarding the risk associated with an investment in the funds.

Investments focused in a particular sector are subject to greater risk, and are more greatly impacted by market volatility, than more diversified investments.

The funds are non-diversified and may experience greater volatility than a more diversified investment.

Interest rate risk refers to the risk that bond prices generally fall as interest rates rise and vice versa.

During the final year of the funds' operations, as the bonds mature and the portfolio transitions to cash and cash equivalents, the funds' yield will generally tend to move toward the yield of cash and cash equivalents and thus may be lower than the yields of the bonds previously held by the funds and/or bonds in the market.

An issuer may be unable or unwilling to meet interest and/or principal payments, thereby causing its instruments to decrease in value and lowering the issuer's credit rating.

Income generated from the funds is based primarily on prevailing interest rates, which can vary widely over the short- and long-term. If interest rates drop, the funds' income may drop as well.

During periods of rising interest rates, an issuer may exercise its right to pay principal on an obligation later than expected, resulting in a decrease in the value of the obligation and in a decline in the funds' income.

An issuer's ability to prepay principal prior to maturity can limit the funds' potential gains. Prepayments may require the funds to replace the loan or debt security with a lower-yielding security, adversely affecting the funds' yield.

The funds currently intend to effect creations and redemptions principally for cash, rather than principally in-kind because of the nature of the funds' investments. As such, investments in the funds may be less tax-efficient than investments in ETFs that create and redeem in-kind.

Unlike a direct investment in bonds, the funds' income distributions will vary over time and the breakdown of returns between fund distributions and liquidation proceeds are not predictable at the time of investment.

For example, at times the funds may make distributions at a greater (or lesser) rate than the coupon payments received, which will result in the funds returning a lesser (or greater) amount on liquidation than would otherwise be the case. The rate of fund distribution payments may affect the tax characterization of returns, and the amount received as liquidation proceeds upon fund termination may result in a gain or loss for tax purposes.

During periods of reduced market liquidity or in the absence of readily available market quotations for the holdings of the fund, the ability of the fund to value its holdings becomes more difficult and the judgment of the sub-adviser may play a greater role in the valuation of the fund's holdings due to reduced availability of reliable objective pricing data.

BulletShares® High Yield ETFs: The values of junk bonds fluctuate more than those of high-quality bonds and can decline significantly over short time periods. The risks of investing in securities of foreign issuers, including emerging market issuers, can include fluctuations in foreign currencies, political and economic instability, and foreign taxation issues.

The funds' use of a representative sampling approach will result in its holding a smaller number of securities than are in the underlying index, and may be subject to greater volatility.

The Fund may invest in privately issued securities, including 144A securities which are restricted (i.e., not publicly traded). The liquidity market for Rule 144A securities may vary, as a result, delay or difficulty in selling such securities may result in a loss to the Fund.

Before investing, investors should carefully read the prospectus and/or summary prospectus and carefully consider the investment objectives, risk, charges and expenses. For this and more complete information about the funds, investors should ask their advisors for a prospectus/summary prospectus or visit [invesco.com/fundprospectus](https://www.invesco.com/fundprospectus).

This does not constitute a recommendation of any investment strategy or product for a particular investor. Investors should consult a financial professional before making any investment decisions.

Shares are not individually redeemable and owners of the Shares may acquire those Shares from the fund and tender those Shares for redemption to the fund in Creation Unit aggregations only, typically consisting of 100,000 or 150,000 Shares.

Switzerland:

The offer of the Fund in Switzerland is directed at professional clients, excluding high-net-worth-individuals or their private investment structure with an opting-out as per Art.5 para 1 FinSA, and at retail clients with a portfolio management or advisory relationship with a financial intermediary pursuant to Article 10(3ter) CISA.
