

This marketing communication is for Professional investors and Qualified clients/sophisticated investors. Investors should read the legal documents prior to investing. This document may also be used by financial intermediaries in the United States as defined in the important information section.

# Invesco CoinShares Global Blockchain UCITS ETF

Find the hidden potential in the race  
to access blockchain

The Invesco CoinShares Global Blockchain UCITS ETF aims to capture the upside growth potential of companies involved with blockchain technology. This potential is often hidden within companies that would probably be overlooked by most investors.

Our passive ETF aims to track the performance of the CoinShares Blockchain Global Equity Index, constructed by an investment firm specialising in providing institutional investors with exposure to digital assets and blockchain technology.

Real earnings potential not yet fully reflected in company share prices

Designed to evolve with the potential growth of the blockchain technology

Diversified portfolio of global equities across different sectors

---

#### Investment Risks

For complete information on risks, refer to the legal documents.

---

##### Value Fluctuation

The value of investments, and any income from them, will fluctuate. This may partly be the result of changes in exchange rates. Investors may not get back the full amount invested.

---

##### Securities Lending

The Fund may be exposed to the risk of the borrower defaulting on its obligation to return the securities at the end of the loan period and of being unable to sell the collateral provided to it if the borrower defaults.

---

##### Equity

The value of equities and equity-related securities can be affected by a number of factors including the activities and results of the issuer and general and regional economic and market conditions. This may result in fluctuations in the value of the Fund.

---

##### Concentration

The Fund might be concentrated in a specific region or sector or be exposed to a limited number of positions, which might result in greater fluctuations in the value of the Fund than for a fund that is more diversified.

The investment concerns the acquisition of units in a fund and not in a given underlying asset.

# Sizing up the opportunity

You could draw a strong comparison between the internet and blockchain. With blockchain technology still in its early days, the potential for changing the global economy is under-appreciated by the market. This provides an opportunity for investors who can capture this hidden potential.

## The internet started with email

The internet impacts every part of our lives, but the underlying technology was first used simply to share information between two computers. Just imagine if you could have foreseen how that technology would progress and been able to identify companies that would drive global change.

The companies that would find new ways to use the technology are now among the largest in the world: Twitter pioneered a way for us to create information, Dropbox for storing information, Netflix for transmitting information and Apple for consuming information.

## Blockchain is now just beginning

Many companies, particularly in financial services, are already investing millions of dollars in researching and building blockchain infrastructure. There are countless other applications for the technology going through testing or in the consultation phase.

With blockchain technology still in its early days, the potential for changing the global economy is under-appreciated by the market

## Blockchain for a diverse range of industries

Banking 	Asset management 	Insurance 	Real estate sales 	Health care 	Identity security 
Transportation 	Internet advertising 	Auto leasing 	Auto sales and registration 	Cloud storage 	Music and entertainment 
Video encoding, storage & distribution 	Legal contracts 	Supply chain management 	Energy 	Government and politics 	Charities 
Law enforcement 	Human resources 	Credit history 	Publishing 	Education 	Agriculture 

For illustrative purposes only.

# What is blockchain?

Blockchain is an innovative technology designed to manage the transfer of value and assets.

## The definition

A 'blockchain' is simply a ledger, or a complete record, of all transactions and balances in a given system. It was first introduced in 2008 as the public transaction ledger for Bitcoin, the world's first cryptocurrency, but we believe the potential for blockchain to change the global economy extends way beyond that initial application.

As it did with Bitcoin, blockchain is used to capture and store all the details of all transactions related to a specific asset. The transactions do not have to be financial, and the asset could refer to physical assets, contracts, records or other information.

## Why use it

One attraction of using blockchain is that multiple parties can contribute to and trust a single record of ownership without needing to trust each other.

Some of the other objectives/capabilities:

- Increase transparency and ease of auditability
- Reduce the potential for fraud
- Streamline business processes

## Every blockchain will have some similarities:

- Unique address for each user (similar concept to email addresses)
- Transactions
- Ledger containing a complete history of all transactions

You need a blockchain address to request a transaction. In the example of a cryptocurrency, you may request a payment from your blockchain address to someone else's blockchain address. The payment would be the transaction that, once verified as legitimate, is then added to the blockchain ledger. It is then a permanent, traceable and unalterable record.

## Blockchains may differ in two significant ways:

	Open (permission-less)	Closed (permissioned)
<b>Who can access the blockchain?</b>	Anyone can access the blockchain network	Only a defined group of people can access the network
	Cryptocurrencies are examples of an open blockchain	Corporate or bank blockchains tend to be closed networks
<b>How are transactions added to the blockchain ledger?</b>	Transactions are added to the ledger process known as "mining"	A central entity determines which transactions should be added to the ledger

## How blockchain works

### Someone requests a transaction

Transaction can involve a physical asset, cryptocurrency, medical record, legal contract or any other information

The requested transaction is broadcast to all participants ("nodes")

The network of nodes validates the transaction using known algorithms

### The transaction is complete

The new block is added to the existing blockchain and is permanent and unalterable

Once verified, the transaction is combined with other transactions to create a new block of data

For illustrative purposes only.

## Blockchain in practice

### Walmart's use of blockchain technology

#### The problem:

What do they do when there is an outbreak of a potentially life-threatening bacteria? For instance, in 2018, when there was e-coli found in lettuce in a certain part of the country. Walmart has a huge supply network of farms across the country, and without a way to trace the origins of its produce, they may be forced to pull all lettuce from the shelves.

#### Blockchain solution:

All of Walmart's lettuce and spinach suppliers are now required to record the movement of produce onto a blockchain database. By tracking it from the farm (and even the specific section of the farm) to the store location, the blockchain provides secure, permanent and unalterable traceability, helping Walmart effectively manage any contamination as soon as it's detected.

This blockchain was developed by IBM. Following a two-year pilot programme, Walmart is rolling it out to more than 100 farms across the country and says it is now using blockchain to track other items from chicken to yogurt.

### The use of blockchain technology in the real estate industry

#### The problem:

With any real estate transaction, there is a lot of paper-shuffling involved. Documents going back and forth between multiple parties by email, fax and courier is costly, inefficient and, particularly when you consider the need to transfer money at various stages, open to fraud.

#### Blockchain solution:

"Smart contracts" are being used increasingly, with the blockchain ledger providing an unalterable, permanent and transparent record between the multiple parties involved throughout the transaction. Each party could also be required to validate each transaction, which reduces the potential for fraud.

### The use of blockchain in health care

#### The problem:

Within health care, patients often have little control when it comes to the confidentiality of their information.

#### Blockchain solution:

Health care organisations across the globe are using blockchain technology as an encrypted digital inventory to store, manage and update client information, without ever compromising security.

# The challenge of investing in blockchain

Blockchain is still an emerging technology, and the investment potential is generally unrealised and may be difficult to access.

The few pure-play companies available today tend to be small and overly exposed to cryptocurrency prices. There are many other companies, however, that have potential to generate real earnings from blockchain technology. But that potential is often hidden from view. The challenge for investors is how to identify and gain exposure to it.

[What is the best way to gain exposure to and evolve with this hidden potential?](#)

# Capture the opportunity with Invesco CoinShares Global Blockchain UCITS ETF

Our ETF uses an index with unique blockchain insights from CoinShares, Europe’s largest digital asset investment firm and one of the world’s leading experts on blockchain technology.

**Unique blockchain expertise** from CoinShares, a specialist in digital assets.

**Liquid exposure** to hidden opportunities in blockchain technology growth.

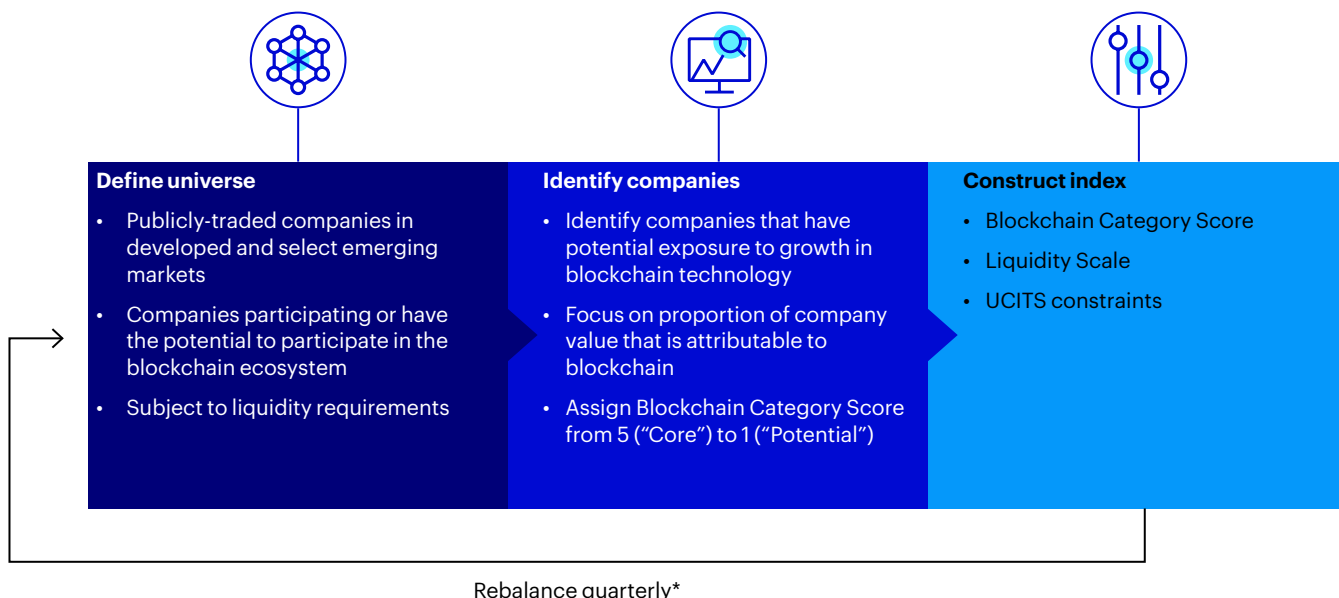

**Portfolio of global equities**, across different sectors and regions.

Not only does the index offer exposure to global companies that participate in the blockchain ecosystem, it also includes companies that are best positioned to benefit from the potential blockchain revolution.

The investment universe starts with public global companies in developed and emerging markets and considers companies across the whole blockchain ecosystem. Blockchain-related areas include:

- Cryptocurrency mining hardware, technology operations
- Energy, token investments
- Financial services, payment systems
- Blockchain technology solutions, consulting, or communication services

## CoinShares Blockchain Global Equity Index Methodology

Source: Invesco, CoinShares, Solactive index methodology. \*Rebalances scheduled for last business day in January, April, July and October.

### Scoring the companies

Companies that have potential exposure to blockchain technology growth are identified and assigned a Blockchain Category Score. Scores range from 5 (“Core”), where most of the company’s value can be attributed to blockchain-related business activities, to 1 (“Potential”), where companies currently do not conduct any blockchain-related business activities, but have assets, expertise, or technology that have blockchain growth potential.

### Assigning weights

Stocks are then weighed based on their Blockchain Category Scores and adjusted for liquidity to ensure tradability, and capped to ensure compliance with UCITS diversification rules.

The index offers exposure to global companies that actively participate in the blockchain ecosystem, and it also includes non-blockchain companies that are well-positioned to capitalise on the potential blockchain technology growth. In general, most of the opportunity lies within companies where it is not yet realised and reflected in valuations.

### Blockchain Category Scores

	5 Core	4 Significant	3 Moderate	2 Developing	1 Potential
<b>% of corporate value attributable to blockchain technology</b>	Majority (typically over 50%) Pure-play companies	Significant (typically 15% to 50%)	Moderate (typically 5% to 15%)	Small (typically 0% to 5%)	0% (companies with assets that have potential in blockchain technology)
		Companies with at least one segment already offering a blockchain-related product, or a company holding a blockchain-related asset			

Source: Invesco, CoinShares.

# Evolving with the growth in blockchain technology

The index is designed to capture the potential for blockchain-related earnings hiding within existing companies and to evolve as the growth of blockchain technology brings other opportunities to the surface.

### Capturing current opportunities

Most of the index is currently in companies categorised as having either “Developing” or “Potential” exposure to blockchain-related earnings. These are businesses that CoinShares has identified as being well-positioned to capitalise on the emerging blockchain technology.

At present, the most recognised application of blockchain is cryptocurrencies, but this will likely change over time as more companies develop and adopt the technology. This natural evolution should lead to a greater number and variety of companies with blockchain as a core business. This index is designed to evolve and capture these new opportunities as they develop.

### Evolving with the future

The selection process adjusts to the emerging opportunity by prioritising more blockchain-exposed companies in both selection and weighting. This robust methodology gives investors access to the potential upside related to the growth of blockchain technology through a well-diversified global portfolio of high-quality stocks.

### How our index adjusts with future blockchain growth

■ Index constituents  
■ Eligible securities

#### Blockchain Category Score

<p><b>5</b> Core</p>	<p><b>Current</b> Universe of eligible securities</p> <p><b>Future</b> Universe of eligible securities</p>
<p><b>4</b> Significant</p> <p>Include 4s and 5s, up to maximum 75 constituents. If not enough, then...</p>	
<p><b>3</b> Moderate</p> <p>Add 3s up to maximum 75 constituents. If not enough, then...</p>	
<p><b>2</b> Developing</p> <p>Add 2s up to maximum 60 constituents. If not enough, then...</p>	
<p><b>1</b> Potential</p> <p>Add 1s up to maximum 50 constituents, with a minimum of 40 constituents.</p>

UCITS ETF's units / shares purchased on the secondary market cannot usually be sold directly back to UCITS ETF. Investors must buy and sell units / shares on a secondary market with the assistance of an intermediary (e.g. a stockbroker) and may incur fees for doing so. In addition, investors may pay more than the current net asset value when buying units / shares and may receive less than the current net asset value when selling them.

The fund is not sponsored, promoted, sold or supported in any other manner by Solactive AG nor does Solactive AG offer any express or implicit guarantee or assurance either with regard to the results of using the Index and/or Index trade mark or the Index Price at any time or in any other respect. The Index is calculated and published by Solactive AG.

For the full objectives and investment policy please consult the current prospectus.

The offering of ETFs has not been and will not be notified to the Belgian Financial Services and Markets Authority (Autoriteit voor Financiële Diensten en Markten/Autorité des Services et Marchés Financiers) nor has this document been, nor will it be, approved by the Financial Services and Markets Authority. The ETFs may be offered in Belgium only to a maximum of 149 investors or to investors investing a minimum of €250,000 or to professional or institutional investors, in reliance on Article 5 of the Law of August 3, 2012. This document may be distributed in Belgium only to such investors for their personal use and exclusively for the purposes of this offering of ETFs. Accordingly, this document may not be used for any other purpose nor passed on to any other investor in Belgium.

German investors may obtain the offering documents free of charge in paper or electronic form from the issuer or from the German information and paying agent (Marcard, Stein & Co AG, Ballindamm 36, 20095 Hamburg, Germany).

No action has been taken or will be taken in Israel that would permit a public offering of the Fund or distribution of this document to the public in Israel. This Fund has not been approved by the Israel Securities Authority (the ISA). Accordingly, the Fund shall only be sold in Israel to an investor of the type listed in the First Schedule to the Israeli Securities Law, 1968, which has confirmed in writing that it falls within one of the categories listed therein (accompanied by external confirmation where this is required under ISA guidelines), that it is aware of the implications of being considered such an investor and consents thereto, and further that the Fund is being purchased for its own account and not for the purpose of re-sale or distribution. This document may not be reproduced or used for any other purpose, nor be furnished to any other person other than those to whom copies have been sent. Nothing in this document should be considered investment advice or investment marketing as defined in the Regulation of Investment Advice, Investment Marketing and Portfolio Management Law, 1995 ("the Investment Advice Law"). Investors are encouraged to seek competent investment advice from a locally licensed investment advisor prior to making any investment. Neither Invesco Ltd. Nor its subsidiaries are licensed under the Investment Advice Law, nor does it carry the insurance as required of a licensee thereunder. This document does not constitute an offer to sell or solicitation of an offer to buy any securities or fund units other than the fund offered hereby, nor does it constitute an offer to sell to or solicitation of an offer to buy from any person or persons in any state or other jurisdiction in which such offer or solicitation would be unlawful, or in which the person making such offer or solicitation is not qualified to do so, or to a person or persons to whom it is unlawful to make such offer or solicitation.

The publication of the supplement in Italy does not imply any judgment by CONSOB on an investment in a product. The list of products listed in Italy, and the offering documents for and the supplement of each product are available: (i) at [etf.invesco.com](http://etf.invesco.com) (along with the audited annual report and the unaudited half-year reports); and (ii) on the website of the Italian Stock Exchange [borsaitaliana.it](http://borsaitaliana.it).

The representative and paying agent for the sub-funds of Invesco Markets plc and Invesco Markets II plc in Switzerland is BNP Paribas Securities Services, Paris, succursale de Zurich, Selnaustrasse 16, 8002 Zurich, Switzerland. The offering documents, articles of incorporation and annual and semi-annual reports may be obtained free of charge from the representative in Switzerland. The ETFs are domiciled in Ireland.
