Invesco

Tactical Asset Allocation

Maintaining defensive portfolio positioning, favoring fixed income over equities, and underweighting credit risk. Downward revisions in earnings expectations across Europe and Japan, leading to a moderate underweight in developed ex-US equities relative to US equities.

Alessio de Longis, CFA®
Senior Portfolio Manager
Head of Asset Allocation
Invesco Solutions

Our macro process drives tactical asset allocation decisions over a time horizon between six months and three years, on average, seeking to harvest relative value and return opportunities between asset classes (e.g., equity, credit, government bonds, and alternatives), regions, factors, and risk premia.

Synopsis

- Cyclical regions, such as Europe and Japan, are levered to global trade and are experiencing a weakening of fundamentals and downgrades in earnings expectations.
- Our framework remains in a contraction regime for the 12th consecutive month. We maintain a cautious asset allocation versus benchmark, overweighting fixed income relative to equities and favoring defensive sectors. We move to a moderate underweight in developed ex-US equities versus US equities on lower earnings expectations. In fixed income, overweight duration via inflation-linked bonds, and underweight credit risk.

Macro update

Instability in global trade policy continues to cloud the outlook. On May 28, the US Court of International Trade suspended the tariffs imposed by the US administration under the authority of the International Emergency Economic Powers Act (IEEPA). While countries around the world wait for the settlement of this dispute, likely driving the legal path of future trade negotiations, the economic and market reality remains unchanged. The US administration retains several channels of executive authority to implement their tariff agenda, including Section 301 and Section 122 of the Trade Act of 1974, or Section 891 and Section 899 of the Internal Revenue Code, included as provisions in the budget bill under review by Congress. While significant modifications are anticipated, the latter two avenues have the potential to amplify "trade wars" into "capital and investment wars," with the proposed introduction of adverse and broad-based taxation of foreign capital in the United States. In fact, the strategic economic policy of the US administration sees US trade deficits and the global role of US capital markets as manifestations of the same "public good" offered by the United States to the rest of the world via its reserve currency status. Import tariffs and taxation of foreign-owned US assets (including US Treasuries) are seen as potential levers to increase fiscal revenues, cheapen the US dollar, and allow the US to earn a fee for the service provided to the global economy via its liquid capital markets. Developments surrounding these policies could be very destabilizing for financial markets across currency, equity and fixed income, undermining the attractiveness of US assets at a time of large and growing financing needs (fiscal and trade deficits).

Over the past month, risky assets have generally overlooked these developments, with equities outperforming fixed income and credit spreads tightening by 20 - 60 bps between investment grade, high yield, emerging sovereign debt and bank loans. As a result, our barometer of global risk appetite has recently stabilized but remains on a decelerating trend, historically consistent with deteriorating growth expectations. On the other hand, US leading economic indicators continue to slow, led by weak business and consumer sentiment surveys, while hard economic statistics suggest ongoing resilience in labor markets and consumer spending. Our framework remains in a contraction regime for the 12th consecutive month, with growth below trend and decelerating (**Figures 1** and **2**).

Over the past month, risky assets have generally overlooked trade and policy uncertainty.

Figure 2: Global risk appetite has stabilized but remains on a weakening trend, pointing to lower growth expectations
GRACI and Global LEI

Sources: Bloomberg L.P., MSCI, FTSE, Barclays, JPMorgan, Invesco Solutions research and calculations, from Jan. 1, 1992 to May 31, 2025. The Global Leading Economic Indicator (LEI) is a proprietary, forward-looking measure of the growth level in the economy. A reading above (below) 100 on the Global LEI signals growth above (below) a long-term average. The Global Risk Appetite Cycle Indicator (GRACI) is a proprietary measure of the markets' risk sentiment. A reading above (below) zero signals a positive (negative) compensation for risk-taking in global capital markets in the recent past. **Past performance does not guarantee future results.**

Contrary to the resilience in equity markets, downward revisions in earnings expectations have resumed across regions, with a sharp deterioration in cyclical markets such as Europe, Japan and most small open economies levered to global trade. As a result, our indicators point to weakening fundamentals in developed ex-US equities, leading us to a moderate underweight in this region relative to US equities for the first time since February (**Figure 3**).

Our indicators point to weakening fundamentals in developed ex-US equities, leading us to a moderate underweight in this region relative to US.

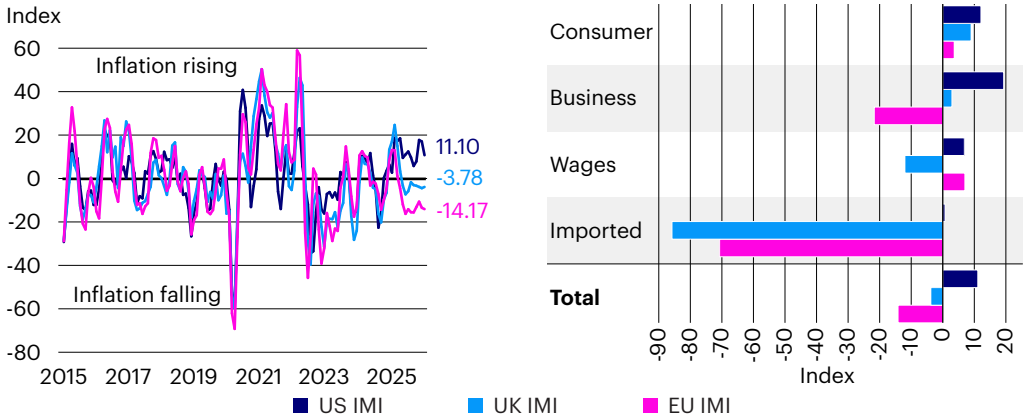
"

In sovereigns, we maintain a maximum overweight exposure to US TIPS relative to nominal Treasuries the given sticky inflation momentum in the US.

Figure 4: Inflation remains sticky in the US, while moderating in Europe



Sources: Bloomberg L.P. data as of May 31, 2025, Invesco Solutions calculations. The US Inflation Momentum Indicator (IMI) measures the change in inflation statistics on a trailing three-month basis, covering indicators across consumer and producer prices, inflation expectation surveys, import prices, wages, and energy prices. A positive (negative) reading indicates inflation has been rising (falling) on average over the past three months.

We implemented minor changes to our asset allocation this month in the Global Tactical Allocation Model.

We reinstate a moderate overweight to US equities versus other developed markets on deteriorating earnings expectations in Europe and Japan.

We move to a moderate underweight in the US dollar, driven by narrowing interest rate differentials relative to the rest of the world and economic data outside the US continuing to surprise to the upside.

Investment positioning

We implemented minor changes to our asset allocation this month in the Global Tactical Allocation Model.[1] We remain underweight risk relative to benchmark, underweighting equities relative to fixed income, primarily via an underweight to emerging markets and developed markets outside the US. We reinstate a moderate overweight to US equities versus other developed markets on deteriorating earnings expectations in Europe and Japan. We maintain overweight exposure to defensive sectors with quality and low volatility characteristics. In fixed income, we underweight credit risk[2] relative to benchmark and overweight duration via inflation-linked bonds at the expense of nominal Treasuries (**Figures 5** to **8**). In particular:

- In **equities**, we return to a moderate overweight in the US relative to other developed markets. Despite renewed weakness in the US dollar, meaningful downward revisions in earnings expectations in Europe and Japan led our models to reduce exposure in these cyclical markets, more levered to global trade. Similarly, we maintain a moderate underweight in emerging market equities relative to developed markets. We continue to favor defensive sectors with quality and low volatility characteristics, tilting towards larger capitalizations at the expense of value, mid and small caps. We maintain exposures to defensive sectors such as health care, staples, utilities, and technology at the expense of cyclical sectors such as financials, industrials, materials, and energy.
- In **fixed income**, we underweight credit risk and overweight duration, favoring investment grade and sovereign emerging fixed income relative to high yield. Given the decelerating growth environment and historically tight credit spreads, we believe the risk-reward in this position is attractive. In sovereigns, we maintain a maximum overweight exposure to US TIPS relative to nominal Treasuries the given sticky inflation momentum in the US (**Figure 4**).
- In **currency markets**, we move to a moderate underweight in the US dollar, driven by narrowing interest rate differentials relative to the rest of the world and economic data outside the US continuing to surprise to the upside. Within developed markets, we favor the euro, the British pound, Norwegian kroner, Swedish krona, and Singapore dollar relative to the Swiss Franc, Japanese yen, Australian, and Canadian dollars. In EM, we favor high yielders with attractive valuations such as the Colombian peso, Brazilian real, Indian Rupee, Indonesian Rupiah, and Mexican peso, relative to low yielding and more expensive currencies such as the Korean won, Taiwan dollar, Philippines peso, and Chinese renminbi.

Figure 5: Relative tactical asset allocation positioning

Maintaining defensive positioning, favoring fixed income over equities

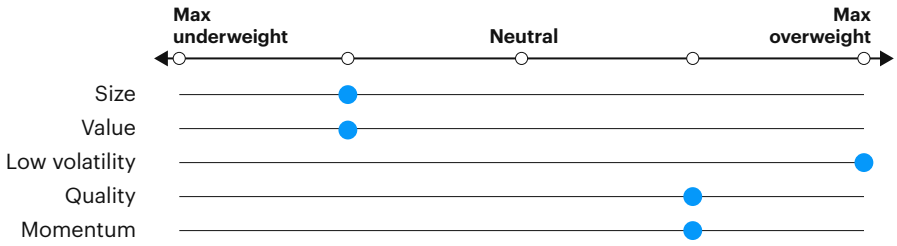
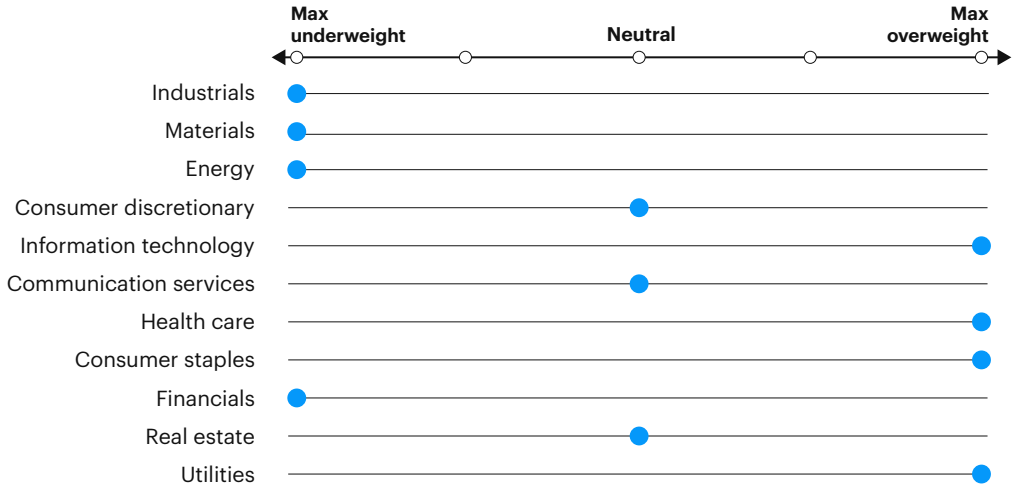
1. Reference benchmark 60% MSCI ACWI, 40% Bloomberg Global Aggregate Hedged Index.
2. Credit risk defined as duration times spread (DTS).

Figure 6: Tactical factor positioning
Overweight quality, low volatility, and momentum



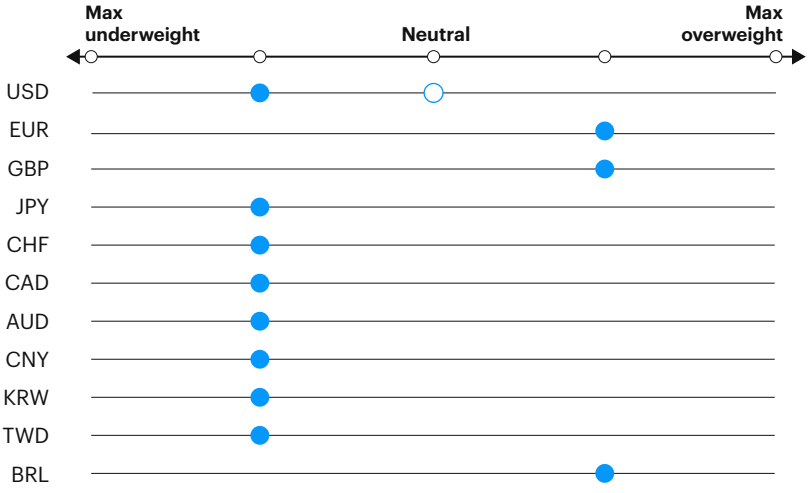
Source: Invesco Solutions, June 1, 2025. For illustrative purposes only. Neutral refers to an equally weighted factor portfolio.

Figure 7: Tactical sector positioning
Sector exposures favoring defensives



Source: Invesco Solutions, June 1, 2025. For illustrative purposes only. Sector allocations derived from factor and style allocations based on proprietary sector classification methodology. As of December 2023, Cyclicals: energy, financials, industrials, materials; Defensives: consumer staples, health care, information technology, real estate, utilities; Neutral: consumer discretionary and communication services.

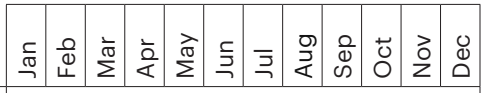
Figure 8: Tactical currency positioning
Underweight US dollar, favoring euro and sterling vs. other developed currencies



Source: Invesco Solutions, June 1, 2025. For illustrative purposes only. Currency allocation process considers four drivers of foreign exchange markets: 1) US monetary policy relative to the rest of the world, 2) global growth relative to consensus expectations, 3) currency yields (i.e., carry), 4) currency long-term valuations.

Regime signal history

Recovery Expansion Slowdown Contraction



2018

- **Market sentiment:** Decelerated following Q1 as equity markets had two significant corrections: The Federal Reserve (Fed) hiked rates four times, privacy and regulatory concerns took hold of the technology sector, and trade tensions between the US and China escalated.
- **Economic data:** Was supported by a tight labor market and strong services sector, despite gradual weakening in manufacturing.
- **Our regime framework (2 shifts):** Risk-on in Q1 and rotated to a defensive stance throughout the year. Defensive asset classes outperformed, led by global fixed income.

2019

- **Market sentiment:** Bottomed early and made a significant turnaround midyear as the Fed switched to a dovish stance, eventually leading to rate cuts in H2. US-China trade tensions eased amidst a "Phase One" deal.
- **Economic data:** Deteriorated due to weaker manufacturing and services data. Yield curve inversion raised recessionary concerns.
- **Our regime framework (3 shifts):** Defensive in H1, then shifted into a recovery with the combination of below-trend growth but improving market sentiment. Equities posted strong returns led by the US, credit spreads tightened, and duration was supported by interest rate cuts.

2020

- **Market sentiment:** Deteriorated quickly as emerging market equities underperformed in response to COVID-19. Sentiment reversed in the summer as large monetary and fiscal stimulus supported the economy. Reopening post-lockdown and vaccine news fueled positive sentiment in Q4.
- **Economic data:** Weakened to historic levels before the eventual economic reopening and resulting rebound. Overall economic data remained below-trend throughout the year.
- **Our regime framework (2 shifts):** Rotated into a contraction in February, ahead of the depths of market volatility, and shifted into recovery in June as the global economy reopened, benefiting from cyclical assets outperforming in H2 2020.

2021

- **Market sentiment:** Moved higher following the economic reopening in H2 2020. Market volatility fell significantly. Historic levels of fiscal stimulus were enacted in the US, and COVID-19 vaccines were slowly deployed.
- **Economic data:** Continued to normalize and moved to above-trend despite supply chain bottlenecks and supply-demand disruptions. Inflationary pressures emerged, and Fed rhetoric became more hawkish in December.
- **Our regime framework (2 shifts):** Was in an expansionary regime throughout the year. This was validated as equities, led by the US, outperformed, credit spreads tightened, and bond yields rose.

2022

- **Market sentiment:** Peaked early in the year and deteriorated following Russia's invasion of Ukraine, the surge in energy prices, and inflationary pressures. Aggressive monetary policy tightening led to negative growth implications.
- **Economic data:** Weakened from 2021 peaks but remained above-trend for roughly half the year. Consumers benefitted from a tight labor market, fueling strong retail sales, which helped buoy a supply chain-constrained manufacturing sector.
- **Our regime framework (4 shifts):** Changed multiple times but spent the bulk of the year positioned defensively. This was beneficial as equities underperformed and duration also sold off meaningfully due to higher rates.

2023

- **Market sentiment:** Declined in Q1 following US regional banking failures. Turned positive again in H2 as inflation showed signs of moderating, leading to the end of the Fed hiking cycle. Markets became optimistic on themes including AI advancements and China's post-COVID reopening.
- **Economic data:** Remained below-trend, although supported by consumer spending, business investment, and government spending.
- **Our regime framework (2 shifts):** Significantly pivoted from defensive to cyclical in H2, consistent with tightening credit spreads, equity outperformance, and rising bond yields. However, cyclical equities underperformed due to a relentless bid for AI-related, quality, and growth equities.

2024

- **Market sentiment:** Rose in H1 as inflation decelerated, markets rewarded AI adoption, and consumer spending remained resilient. Deteriorated in H2 with US election uncertainty, fears over a weakening labor market, and corporate earnings growth concentrated in expensive mega-cap names.
- **Economic data:** Below-trend as the unemployment rate rose despite resilient consumer spending. The Fed began easing, and the yield curve began to steepen.
- **Our regime framework (1 shift):** Risk-on until midyear when below-trend and decelerating growth triggered a contraction. Cross-asset class performance in H1 was consistent with this stance, while equity returns were led by the Magnificent 7 and AI theme rather than cyclical fundamental drivers.
