

Invesco Equal Weight 0-30 Year Treasury ETF

GOVI

Fund description

The Invesco Equal Weight 0-30 Year Treasury ETF (Fund) is based on the ICE 1-30 Year Laddered Maturity US Treasury Index (Index). The Fund will normally invest at least 80% of its total assets in the components of the Index. The Index is designed to track the performance of up to 30 U.S. Treasury Notes or Bonds representing the annual February maturity ladder across the yield curve. The Fund and the Index are rebalanced monthly.

Effective after the close of markets on Aug. 25, 2023, the Fund's name, ticker, underlying index, index provider, investment objective and investment strategy changed. The Fund's name and ticker changed from Invesco 1-30 Laddered Treasury ETF (ticker: PLW) to the Invesco Equal Weight 0-30 Year Treasury ETF (ticker: GOVI). The Fund's Index Provider changed from NASDAQ OMX Group, Inc. to ICE Data Indices, LLC. and its Underlying Index changed from the Ryan/Nasdaq U.S. 1-30 Year Treasury Laddered Index to the ICE 1-30 Year Laddered Maturity US Treasury Index; and as a result, the Fund's objective and strategy changed to seek to track the investment results of the new Underlying index by investing at least 80% of its total assets in securities that comprise the new Underlying Index. See the prospectus for more information.

Returns less than one year are cumulative. Performance data quoted represents past performance. Past performance is not a guarantee of future results; current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and Shares, when redeemed, may be worth more or less than their original cost. See [invesco.com](https://www.invesco.com) to find the most recent month-end performance numbers. Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times. Fund performance reflects fee waivers, absent which, performance data quoted would have been lower.

Index returns do not represent Fund returns. An investor cannot invest directly in an index.

Neither the underlying Index nor the benchmark indexes charge management fees or brokerage expenses, and no such fees or expenses were deducted from the performance shown; nor do any of the indexes lend securities, and no revenues from securities lending were added to the performance shown. In addition, the results actual investors might have achieved would have differed from those shown because of differences in the timing, amounts of their investments, and fees and expenses associated with an investment in the Fund.

Investment risks

There are risks involved with investing in ETFs, including possible loss of money. Shares are not actively managed and are subject to risks similar to those of stocks, including those regarding short selling and margin maintenance requirements. Ordinary brokerage commissions apply. The Fund's return may not match the return of the Underlying Index. The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risk associated with an investment in the Fund.

If interest rates fall, it is possible that issuers of callable securities will call or prepay their securities before maturity, causing the Fund to reinvest proceeds in securities bearing lower interest rates and reducing the Fund's income and distributions.

Reinvestment risk is the risk that a bond's cash flows (coupon income and principal repayment) will be reinvested at an interest rate below that on the original bond.

An issuer may be unable to meet interest and/or principal payments, thereby causing its instruments to decrease in value and lowering the issuer's credit rating.

Investments focused in a particular industry or sector are subject to greater risk, and are more greatly impacted by market volatility, than more diversified investments.

Obligations issued by US Government agencies and instrumentalities may receive varying levels of support from the government, which could affect the fund's ability to recover should they default.

Interest rate risk refers to the risk that bond prices generally fall as interest rates rise and vice versa.

Important information

This does not constitute a recommendation of any investment strategy or product for a particular investor. Investors should consult a financial professional before making any investment decisions.

Before investing, investors should carefully read the prospectus and consider the investment objectives, risks, charges and expenses. For this and more complete information about the fund, investors should ask their financial professionals for a prospectus or download one at invesco.com

Glossary

30 Day SEC Unsubsidized Yield reflects the 30-day yield if the investment adviser were not waiving all or part of its fee or reimbursing the fund for part of its expenses. Total return would have also been lower in the absence of these temporary reimbursements or waivers.

30 Day SEC Yield is based on a 30-day period and is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period.

Credit ratings are assigned by Nationally Recognized Statistical Rating Organizations based on assessment of the credit worthiness of the underlying bond issuers. The ratings range from AAA (highest) to D (lowest) and are subject to change. Not rated indicates the debtor was not rated, and should not be interpreted as indicating low quality. Futures and other derivatives are not eligible for assigned credit ratings by any NRSRO and are excluded from quality allocations. For more information on rating methodologies, please visit the following NRSRO websites: www.standardandpoors.com and select 'Understanding Credit Ratings' under Rating Resources 'About Ratings' on the homepage.; www.ratings.moodys.com and select 'Rating Methodologies' under Research and Ratings on the homepage.

Effective Duration is a measure of a bond's sensitivity to interest rate changes that reflects the change in a bond's price given a change in yield. This duration measure is appropriate for bonds with embedded options.

Intraday NAV is a symbol representing estimated fair value based on the most recent intraday price of underlying assets.
