Market overview

- Global equity markets, particularly China, declined sharply in May, ending a four-month rally. Trade and tariff issues, which were not limited to the US and China, clouded the outlook for many global economies. In response, the European Central Bank maintained its accommodative stance, strongly implying the possibility of future interest rate cuts or further bond purchases. Disagreement within the UK about its withdrawal from the European Union increased uncertainty for the UK and Eurozone economies. Following better performance in June, most global equity markets managed modest positive returns for the second quarter, with developed markets generally outperforming emerging markets. China was an exception, declining approximately 4%. In this environment, the MSCI AC World Index returned 3.61% for the quarter. The MSCI EAFE Index returned 3.68%, while the MSCI Emerging Markets Index returned 0.61%.

Performance highlights

- Invesco International Allocation Fund Class A shares at net asset value (NAV) had a positive return and outperformed the MSCI AC World ex-US Index. (Please see the investment results table on page 2 for fund and index performance.)
- The fund's performance during the quarter is attributable to results of the underlying affiliated funds and strategies, which seek to provide diversified access to international equity markets.

Contributors to performance

- In aggregate, the fund's relative outperformance resulted from its allocation to developed non-US markets and security selection within the underlying holdings. **Invesco International Growth Fund** benefited from positive stock selection in the health care and industrials sectors as well as strong stock selection in China and was a leading individual contributor among the actively managed underlying funds. Two underlying passive funds also added to relative outperformance - **Invesco RAFI Strategic Developed ex-U.S. ETF** and **Invesco S&P International Developed Low Volatility ETF** benefited from performance of individual holdings.

Detractors from performance

- Geographically, the fund's exposure to emerging markets detracted from relative performance. The fund's exposure to small-cap stocks also negatively affected relative performance during the quarter. The primary underlying detractors were **Invesco International Companies Fund**, **Invesco RAFI Strategic Developed ex-US Small Company ETF** and **Invesco Low Volatility Emerging Markets Fund**. Within **Invesco International Companies Fund**, positive stock selection in the health care sector was offset by negative stock selection in the information technology, industrials and consumer discretionary sectors.

Positioning and outlook

- Invesco International Allocation Fund is designed to provide strategic access to international equity markets, across developed and emerging economies, market capitalizations and investment styles.
- The investments are chosen from Invesco's broad range of mutual funds, which provide access to experienced investment teams who actively manage their funds, and from Invesco's smart beta exchanged-traded funds.
- Global growth appears to be decelerating but continuing its upward trajectory, supporting positive global stock market returns. Despite the fact that a truce was negotiated at the end of the second quarter, the US-China trade war may not be resolved any time soon and there is potential for expansion of trade conflicts, especially between the US and the European Union. However, more accommodative monetary policy from central banks, especially the Federal Reserve and the People's Bank of China, could provide a powerful countervailing force. This should create an environment that favors risk assets globally. Continued volatility is expected given that risks, especially geopolitical risks, are on the rise. Against this backdrop, we believe broad diversification remains prudent.

Performance quoted is past performance and cannot guarantee comparable future results; current performance may be lower or higher. Visit invesco.com/performance for the most recent month-end performance. Performance figures reflect reinvested distributions and changes in net asset value (NAV). Investment return and principal value will vary, and you may have a gain or a loss when you sell shares. Class A shares at NAV are available only to certain investors and have no sales charge; therefore, performance is at NAV. Class Y shares have no sales charge; therefore, performance is at NAV. Class R shares have no sales charge; therefore, performance is at NAV. Performance shown prior to the inception date of Class R6 shares is that of Class A shares and includes the 12b-1 fees applicable to Class A shares. Class R6 shares have no sales charge; therefore, performance is at NAV. Class R5 shares have no sales charge; therefore, performance is at NAV. Returns less than one year are cumulative; all others are annualized. Fund performance reflects any applicable fee waivers and/or expense reimbursements. Had the adviser not waived fees and/or reimbursed expenses currently or in the past, returns would have been lower. See current prospectus for more information. Index returns do not reflect any fees, expenses, or sales charges.

Class A shares at NAV and Class Y shares are available only to certain investors. Class R shares are generally available only to employee benefit plans. Class R6 shares and Class R5 shares are primarily intended for retirement plans that meet certain standards and for institutional investors. See the prospectus for more information. Asset allocation/diversification does not guarantee a profit or eliminate the risk of loss.

The fund holdings are organized according to the Global Industry Classification Standard, which was developed by and is the exclusive property and service mark of MSCI Inc. and Standard & Poor's.

Asset allocation/diversification does not guarantee a profit or eliminate the risk of loss. Index performance reflects reinvestment of dividends. An investment cannot be made directly in an index.

The MSCI All Country (AC) World Ex-U.S. Index is an index considered representative of developed and emerging market stock markets, excluding the US. The index is computed using the net return, which withholds applicable taxes for non-resident investors. An investment cannot be made directly in an index.

The S&P 500® Index is an unmanaged index considered representative of the US stock market. An investment cannot be made directly in an index.

12-month forward and trailing P/E are calculated using weighted harmonic averaging, which helps avoid extreme results that may occur due to small relative numbers in the denominator. It doesn't exclude extreme values; instead, it reduces the effect of outliers on the aggregate calculation. The **price/book ratio** is the market price of a stock divided by the book value per share. **Return on equity (ROE)** is net income divided by net worth. The **median 12-Month Fwd. Growth Rate** is the percent change between the next twelve months' mean EPS estimate and the previous twelve months' actuals. The **three-year EPS growth rate** is a weighted average of each stock's growth rate in earnings per share (EPS). EPS is total earnings divided by the number of shares outstanding. The **five-year dividend growth rate** is the weighted average of each stock's annualized percentage rate of growth in dividend yield over five years. The three-year EPS and five-year dividend growth rates are not forecasts of fund performance.

About risk

Derivatives may be more volatile and less liquid than traditional investments and are subject to market, interest rate, credit, leverage, counterparty and management risks. An investment in a derivative could lose more than the cash amount invested.

The risks of investing in securities of foreign issuers can include fluctuations in foreign currencies, political

and economic instability, and foreign taxation issues.

The fund is subject to the risks of the underlying funds. Market fluctuations may change the target weightings in the underlying funds and certain factors may cause the fund to withdraw its investments therein at a disadvantageous time.

Many countries in the European Union are

susceptible to high economic risks associated with high levels of debt, notably due to investments in sovereign debts of European countries such as Greece, Italy and Spain.

The fund is subject to certain other risks. Please see the current prospectus for more information regarding the risks associated with an investment in the fund.

NOT FDIC INSURED | MAY LOSE VALUE | NO BANK GUARANTEE

Before investing, investors should carefully read the prospectus and/or summary prospectus and carefully consider the investment objectives, risks, charges and expenses.
