Market overview

- Following a sharp selloff late last year, equity markets rebounded in the first quarter of 2019, fueled by optimism about a potential US/China trade deal and the Federal Reserve's indication that there would be no interest rate hikes in 2019, a surprising shift in monetary policy. The Fed's more accommodative stance provided a supportive environment for equities and fixed income, even as US economic data were mixed and overseas growth appeared to be slowing. Against this backdrop, the S&P 500 Index posted its best first quarter since 1998, returning 13.65%. Growth stocks outperformed value for the quarter, while mid- and small-caps generally outperformed large-cap stocks.

Performance highlights

- The fund's Class A shares at net asset value (NAV) underperformed the Russell 1000 Value Index in the first quarter. (Please see the investment results table on page 2 for fund and index performance.) All sectors within the Russell 1000 Value Index posted gains, with industrials, information technology (IT), energy and real estate leading the way. Health care and financials were the weakest performers during the quarter.

Contributors to performance

- Stock selection in the financials sector was the largest contributor to relative performance for the quarter. Financial stocks posted gains after trading at recent lows during the fourth quarter. Within the banking industry, **Citigroup** and **Bank of America** were key contributors. **Citigroup** reported better-than-expected profits due to larger cost savings and lower provisions for loan losses.

- Stock selection in consumer staples also contributed to relative return, due in part to **Philip Morris International** and **Mondelez International**. **Philip Morris** reported better-than-expected earnings and provided solid guidance for the full year based on its growing business in reduced risk products (RRPs), such as heated tobacco products and tobacco-free products.

- Stock selection in communication services and an overweight in the energy sector also aided relative performance. Oil prices recovered from their fourth quarter lows, ending the first quarter above \$60 per barrel. Energy stocks also rebounded, and **Devon Energy** was a significant contributor.

Detractors from performance

- Security selection in the IT sector detracted from relative return. Within the sector, **QUALCOMM** was a significant detractor. The stock declined early in the quarter amid concerns about weakening smartphone sales and reduced Chinese demand. The stock later rebounded after an upbeat earnings report, but lagged the overall sector.

- Lack of exposure to real estate also detracted from the portfolio's relative return, as the sector was one of the index's strongest segments during the quarter.

- The portfolio's cash position, while less than 5% on average, also detracted given the rising market environment.

- The fund's allocations to high quality bonds and convertible securities delivered positive returns, but underperformed the Russell 1000 Value Index and detracted from relative return during the quarter.

Positioning and outlook

- At quarter end, the fund's equity positioning was largely unchanged. The largest overweights compared to the Russell 1000 Value Index were in financials and energy, and the largest underweights were in utilities, real estate and consumer staples.

- While equity markets posted strong gains for the quarter, lack of clarity on US trade policy and weakening economic data could potentially dampen returns going forward.

- As always, we seek to invest in companies with attractive valuations and strong fundamentals, qualities that we believe will ultimately be reflected in those companies' stock prices.

Investment results

Average annual total returns (%) as of March 31, 2019

Period	Class A Shares		Class C Shares		Class Y Shares	Broad-Based Index

Performance quoted is past performance and cannot guarantee comparable future results; current performance may be lower or higher. Visit invesco.com/performance for the most recent month-end performance. Performance figures reflect reinvested distributions and changes in net asset value (NAV). Investment return and principal value will vary, and you may have a gain or a loss when you sell shares. No contingent deferred sales charge (CDSC) will be imposed on redemptions of Class C shares following one year from the date shares were purchased. Performance shown at NAV does not include applicable CDSC or front-end sales charges, which would have reduced the performance. Class Y shares have no sales charge; therefore, performance is at NAV. Returns less than one year are cumulative; all others are annualized. Fund performance reflects any applicable fee waivers and/or expense reimbursements. Had the adviser not waived fees and/or reimbursed expenses currently or in the past, returns would have been lower. See current prospectus for more information. Index returns do not reflect any fees, expenses, or sales charges.

Class Y shares are available only to certain investors. See the prospectus for more information.

Asset allocation/diversification does not guarantee a profit or eliminate the risk of loss.

The fund holdings are organized according to the Global Industry Classification Standard, which was developed by and is the exclusive property and service mark of MSCI Inc. and Standard & Poor's.

The Russell 1000® Value Index is an unmanaged index considered representative of large-cap value stocks. The Russell 1000 Value Index is a trademark/service mark of the Frank Russell Co. Russell® is a trademark of the Frank Russell Co. An investment cannot be made directly in an index.

The S&P 500® Index is an unmanaged index considered representative of the US stock market. An investment cannot be made directly in an index.

About risk

Convertible securities may be affected by market interest rates, the risk of issuer default, the value of the underlying stock or the issuer's right to buy back the convertible securities.

An issuer may be unable to meet interest and/or principal payments, thereby causing its instruments to decrease in value and lowering the issuer's credit rating.

Derivatives may be more volatile and less liquid than traditional investments and are subject to market, interest rate, credit, leverage, counterparty and management risks. An investment in a derivative could

lose more than the cash amount invested.

The risks of investing in securities of foreign issuers can include fluctuations in foreign currencies, political and economic instability, and foreign taxation issues.

Interest rate risk refers to the risk that bond prices generally fall as interest rates rise and vice versa.

Preferred securities may include provisions that permit the issuer to defer or omit distributions for a certain period of time, and reporting the distribution for tax purposes may be required, even though the income may not have been received. Further, preferred

securities may lose substantial value due to the omission or deferment of dividend payments.

A value style of investing is subject to the risk that the valuations never improve or that the returns will trail other styles of investing or the overall stock markets.

The fund is subject to certain other risks. Please see the current prospectus for more information regarding the risks associated with an investment in the fund.
