Market overview

- Following a sharp selloff late last year, global equities rebounded in the first quarter of 2019, fueled by accommodative central bank policy and potential for a US/China trade deal. Central bank policy supported equities and fixed income, even as global economic growth appeared to slow. In January, China's central bank initiated a stimulus program to counteract its slowing economy, while the European Central Bank and US Federal Reserve later indicated they would not raise interest rates for the remainder of 2019. Lack of consensus on a deal for the UK's withdrawal from the European Union prompted additional concerns for UK and Eurozone economies, though equities across the region posted gains. US and Chinese equities also delivered robust gains. Both emerging and developed markets had positive returns for the quarter. Among alternative investments, global real estate investment trusts (REITs) were strong performers, as were most commodities. Against this backdrop, the MSCI AC World Index returned 12.18%.
- Government bond yields fell during the quarter, with the yield on the 10-Year US Treasury dropping to 2.4%. Global investment grade corporate bonds posted positive returns, but were outpaced by global high-yield bonds. Bonds with long durations outperformed shorter duration bonds during the quarter.

Performance highlights

- The fund's Class A shares at net asset value (NAV) posted a positive return, performing in line with the fund's custom style-specific benchmark. (Please see the investment results table on page 2 for fund and index performance.)
- The fund's performance during the quarter is attributable to the results of the underlying affiliated funds and strategies, which seek to provide access to a wide array of asset classes and styles including stocks, bonds and alternatives, through actively managed mutual funds and smart beta exchange-traded funds.

Contributors to performance

- The fund's equity allocation produced a positive return and was the leading contributor to absolute and relative performance. As growth outperformed both core and value equities during the quarter, the fund's underlying growth holdings were notable contributors, including Invesco International Select Equity Fund, Invesco International Growth Fund and Invesco Russell Top 200 Pure Growth ETF. Invesco American Franchise Fund outperformed the broad US stock market and added to relative return as well.

Detractors from performance

- Although the majority of the fund's underlying holdings posted positive returns and added to absolute performance, the fund's alternative exposure detracted from relative results. Invesco All Cap Market Neutral Fund and Invesco Long/Short Equity Fund both declined and were the largest detractors from relative return. The fund's exposure to value equities also detracted from relative performance, given value's underperformance of growth. Invesco Diversified Dividend Fund and Invesco Comstock Fund both posted positive returns, but underperformed the broad equity market.

Positioning and outlook

- The fund represents a long-term strategic allocation across asset classes and seeks a total return consistent with a higher level of risk relative to the broad market. The fund targets an allocation of 70%-90% of its total assets in underlying funds that invest primarily in equities (20%-35% in international equities), 5%-30% in underlying funds that invest primarily in fixed-income, and approximately 5%-20% of its total assets in alternative asset classes.
- Global growth appears likely to continue its modest deceleration in the shorter term. In this environment, we expected continued volatility as the geopolitical situation remains unpredictable, but anticipate an upward bias for risk assets due to central banks' accommodative monetary policies. We expect stock market leadership to shift among various factors and regions throughout the year and anticipate that market sentiment will oscillate between embracing risk and avoiding risk. This is an environment where broad diversification is highly recommended.

Performance quoted is past performance and cannot guarantee comparable future results; current performance may be lower or higher. Visit invesco.com/performance for the most recent month-end performance. Performance figures reflect reinvested distributions and changes in net asset value (NAV). Investment return and principal value will vary, and you may have a gain or a loss when you sell shares. No contingent deferred sales charge (CDSC) will be imposed on redemptions of Class C shares following one year from the date shares were purchased. Performance shown at NAV does not include applicable CDSC or front-end sales charges, which would have reduced the performance. Class Y shares have no sales charge; therefore, performance is at NAV. Class S shares have no sales charge; therefore, performance is at NAV. Performance shown prior to the inception date of Class S shares is that of Class A shares and includes the 12b-1 fees applicable to Class A shares. Returns less than one year are cumulative; all others are annualized. Fund performance reflects any applicable fee waivers and/or expense reimbursements. Had the adviser not waived fees and/or reimbursed expenses currently or in the past, returns would have been lower. See current prospectus for more information. Index returns do not reflect any fees, expenses, or sales charges.

Asset allocation/diversification does not guarantee a profit or eliminate the risk of loss.

The equity sector breakdown doesn't account for holdings of Invesco Balanced-Risk Allocation Fund.

The fund holdings are organized according to the Global Industry Classification Standard, which was developed by and is the exclusive property and service mark of MSCI Inc. and Standard & Poor's.

Duration measures a bond fund's price sensitivity to changes in interest rates, taking into account mortgage prepayments, puts, adjustable coupons and potential call dates. Beta is a measure of risk representing how a security is expected to respond to general market movements. Smart Beta represents an alternative and selection index based methodology that seeks to outperform a benchmark or reduce portfolio risk, or both. Smart beta funds may underperform cap-weighted benchmarks and increase portfolio risk.

The Custom Invesco Growth Allocation Index, created by Invesco to serve as a benchmark for Invesco Growth Allocation Fund, is composed of the following indexes: Russell 3000® Index, the MSCI EAFE® Index and Bloomberg Barclays U.S. Aggregate Index. The index composition may change based on the fund's target asset allocation.

Therefore, the current index composition doesn't reflect its historical composition and will likely be altered in the future to better reflect fund's objective. The Russell 3000 Index is a trademark/service mark of the Frank Russell Co. Russell® is a trademark of the Frank Russell Co. An investment cannot be made directly in an index.

The S&P 500® Index is an unmanaged index considered representative of the US stock market. An investment cannot be made directly in an index.

The MSCI All Country (AC) World ex-US Index is an index considered representative of developed and emerging market stock markets, excluding the US. The index is computed using the net return, which withholds applicable taxes for non-resident investors. An investment cannot be made directly in an index.

About risk

Commodities may subject an investor to greater volatility than traditional securities such as stocks and bonds and can fluctuate significantly based on weather, political, tax, and other regulatory and market developments.

An issuer may be unable to meet interest and/or principal payments, thereby causing its instruments to decrease in value and lowering the issuer's credit rating.

Derivatives may be more volatile and less liquid than traditional investments and are subject to market,

interest rate, credit, leverage, counterparty and management risks. An investment in a derivative could lose more than the cash amount invested.

The risks of investing in securities of foreign issuers can include fluctuations in foreign currencies, political and economic instability, and foreign taxation issues.

The fund is subject to the risks of the underlying funds. Market fluctuations may change the target weightings in the underlying funds and certain factors may cause the fund to withdraw its investments therein

at a disadvantageous time.

Growth stocks tend to be more sensitive to changes in their earnings and can be more volatile.

Interest rate risk refers to the risk that bond prices generally fall as interest rates rise and vice versa.

The fund is subject to certain other risks. Please see the current prospectus for more information regarding the risks associated with an investment in the fund.
