

# OSIZ Invesco Russell 1000 Size Factor ETF

As of June 30, 2019

## Fund Description

The Invesco Russell 1000<sup>®</sup> Size Factor ETF (the "Fund") is based on the Russell 1000 Size Factor Index (the "Index"). The Fund will invest at least 90% of its total assets in the securities that comprise the Index. The Index is constructed using a rules-based approach that re-weights securities of the Russell 1000<sup>®</sup> Index with the exhibit small-cap characteristics. The Fund and Index are reconstituted and rebalanced annually.

Russell 1000 Size Factor Index Provider	R1FSF Frank Russell Company
---	--------------------------------

## Growth of \$10,000

Data beginning Fund Inception and ending June 30, 2019. Fund performance shown at NAV.

## Fund Performance & Index History (%)

	YTD	1 year	3 year	5 year	10 year	Fund Inception
<b>Underlying Index</b>						
Russell 1000 Size Factor Index	21.03	6.58	12.75	-	-	9.46
<b>Benchmark Index</b>						
Russell 1000 Index	18.84	10.02	14.15	10.45	14.77	10.06
<b>Fund</b>						
NAV	20.86	6.42	-	-	-	9.25
Market Price	20.83	6.31	-	-	-	9.20

Returns less than one year are cumulative. Performance data quoted represents past performance. Past performance is not a guarantee of future results; current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and Shares, when redeemed, may be worth more or less than their original cost. See [invesco.com](http://invesco.com) to find the most recent month-end performance numbers. Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times. Fund performance reflects fee waivers, absent which, performance data quoted would have been lower.

As the result of a reorganization on May 24, 2019, the returns of the fund for periods on or prior to May 24, 2019 reflect performance of the Oppenheimer predecessor fund.

## 3-Year Index Statistics

	Alpha	Beta	Correlation	Sharpe Ratio	Volatility (%)
Russell 1000 Size Factor Index	-	-	-	0.82	13.89
Russell 1000 Index	-2.07	1.08	0.96	1.04	12.32

Alpha, beta and correlation are that of the underlying index.

## Fund Inception: Nov. 8, 2017

**Index returns do not represent Fund returns. An investor cannot invest directly in an index.**

Neither the underlying Index nor the benchmark indexes charge management fees or brokerage expenses, and no such fees or expenses were deducted from the performance shown; nor do any of the indexes lend securities, and no revenues from securities lending were added to the performance

shown. In addition, the results actual investors might have achieved would have differed from those shown because of differences in the timing, amounts of their investments, and fees and expenses associated with an investment in the Fund.

The Russell 1000<sup>®</sup> Index is an unmanaged index considered representative of large-cap stocks. The Russell 1000 Index is a trademark/service mark of the Frank Russell Co. Russell<sup>®</sup> is a trademark of the Frank

Russell Co.

**Shares are not FDIC insured, may lose value and have no bank guarantee.**

**Shares are not individually redeemable and owners of the Shares may acquire those Shares from the Fund and tender those Shares for redemption to the Fund in Creation Unit aggregations only, typically consisting of 50,000 Shares.**

## About risk

There are risks involved with investing in ETFs, including possible loss of money. Shares are not actively managed and are subject to risks similar to those of stocks, including those regarding short selling and margin maintenance requirements. Ordinary brokerage commissions apply. The Fund's return may not match the return of the Underlying Index. The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risk associated with an investment in the Fund.

The Fund is non-diversified and may experience greater volatility than a more diversified investment.

Stocks of small and mid-sized companies tend to be more vulnerable to adverse developments, may be more volatile, and may be illiquid or restricted as to resale.

The Fund is subject to numerous market trading risks, including the potential lack of an active market, losses from trading in secondary markets, and disruption in the creation/redemption process. During stressed market conditions, Shares may become less liquid as result of deteriorating liquidity which could lead to differences in the market price and the underlying value of those Shares.

A value style of investing is subject to the risk that the valuations never improve or that the returns will trail other styles of investing or the overall stock markets.

Investments focused in a particular sector, such as consumer discretionary and staples, energy, financial services, healthcare, industrials, information technology, materials, real estate, telecommunications and utilities, are subject to greater risk, and are more greatly impacted by market volatility, than more diversified investments.

Increased volatility may result from increased cash flows to the Fund and other market participants that continuously or systematically buy large holdings of small- or mid-cap companies, which can drive prices up

and down more dramatically. Announcements that a security has been added to a widely followed index may cause the price of that security to increase, and decrease when deleted from the index.

The **Intraday NAV** is a symbol representing estimated fair value based on the most recent intraday price of underlying assets. **Volatility** is the annualized standard deviation of index returns. **Beta** is a measure of relative risk and the slope of regression. **Sharpe Ratio** is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe Ratio indicates better risk-adjusted performance. **Correlation** indicates the degree to which two investments have historically moved in the same direction and magnitude. **Alpha** is a measure of performance on a risk-adjusted basis. **Weighted Harmonic Average Stock Price-to-Earnings Ratio (P/E Ratio)** is the share price divided by earnings per share. It is measured on a 12-month trailing basis. **Weighted Harmonic Average Stock Price-to-Book-Value Ratio (P/B Ratio)** is the ratio of a stock's market price to a company's net asset value. **Weighted Harmonic Average** is a method of calculating an average value that lessens the impact of large outliers and increases the impact of small ones. **Weighted Average Return on Equity** is net income divided by net worth. **Weighted Market Capitalization** is the sum of each underlying securities' market value. The **30-Day SEC Yield** is based on a 30-day period and is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period. The **30-Day SEC Unsubsidized Yield** reflects the 30-day yield if the investment adviser were not waiving all or part of its fee or reimbursing the fund for part of its expenses. Total return would have also been lower in the absence of these temporary reimbursements or waivers.

Typically, security classifications used in calculating allocation tables are as of the last trading day of the previous month.

The Global Industry Classification Standard was

developed by and is the exclusive property and a service mark of MSCI, Inc. and Standard & Poor's.
