

LDRI Invesco LadderRite 0-5 Year Corporate Bond ETF

As of June 30, 2019

Fund Description

The Invesco LadderRite 0-5 Year Corporate Bond ETF (Fund) is based on the Nasdaq LadderRite® 0-5 Year USD Corporate Bond Index (Index). The Fund will normally invest at least 80% of its total assets in short-term investment grade corporate bonds that comprise the Index. The Fund does not purchase all of the securities in the Index; instead, the Fund utilizes a "sampling" methodology to help to achieve its investment objective, which seeks to track the investment results (before fees and expenses) of the Index. The Fund and Index are rebalanced monthly.

Returns less than one year are cumulative. Performance data quoted represents past performance. Past performance is not a guarantee of future results; current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and Shares, when redeemed, may be worth more or less than their original cost. See invesco.com to find the most recent month-end performance numbers. Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times. Fund performance reflects fee waivers, absent which, performance data quoted would have been lower.

3-Year Index Statistics

| | Alpha | Beta | Correlation | Sharpe Ratio | Volatility (%) |
|---|-------|------|-------------|--------------|----------------|
| Nasdaq LadderRite 0-5 Year USD Corporate Bond Index | - | - | - | 0.86 | 1.27 |
| ICE BofAML 0-5 Year US Corporate Index | -0.10 | 0.97 | 0.99 | 0.94 | 1.30 |

Alpha, beta and correlation are that of the underlying index.

A Smart Beta Portfolio

Fund Inception: Sept. 10, 2014

Index returns do not represent Fund returns. An investor cannot invest directly in an index.

Neither the underlying Index nor the benchmark indexes charge management fees or brokerage expenses, and no such fees or expenses were deducted from the performance shown; nor do any of

the indexes lend securities, and no revenues from securities lending were added to the performance shown. In addition, the results actual investors might have achieved would have differed from those shown because of differences in the timing, amounts of their investments, and fees and expenses associated with an investment in the Fund.

The ICE BofAML 0-5 Year US Corporate Index tracks the performance of US dollar denominated investment

grade corporate debt publicly issued in the US domestic market.

Shares are not FDIC insured, may lose value and have no bank guarantee.

Shares are not individually redeemable and owners of the Shares may acquire those Shares from the Fund and tender those Shares for redemption to the Fund in Creation Unit aggregations only, typically consisting of 50,000 Shares.

About risk

An issuer may be unable to meet interest and/or principal payments, thereby causing its instruments to decrease in value and lowering the issuer's credit rating.

The Fund currently intends to effect creations and redemptions principally for cash, rather than principally in-kind because of the nature of the Fund's investments. As such, investments in the Fund may be less tax efficient than investments in ETFs that create and redeem in-kind.

There are risks involved with investing in ETFs, including possible loss of money. Shares are not actively managed and are subject to risks similar to those of stocks, including those regarding short selling and margin maintenance requirements. Ordinary brokerage commissions apply. The Fund's return may not match the return of the Underlying Index. The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risk associated with an investment in the Fund.

The risks of investing in securities of foreign issuers can include fluctuations in foreign currencies, political and economic instability, and foreign taxation issues.

Investments focused in a particular sector, such as financials, are subject to greater risk, and are more greatly impacted by market volatility, than more diversified investments.

The Fund may hold illiquid securities that it may be unable to sell at the preferred time or price and could lose its entire investment in such securities.

Interest rate risk refers to the risk that bond prices generally fall as interest rates rise and vice versa.

The Fund's use of a representative sampling approach will result in its holding a smaller number of securities than are in the underlying index, and may be subject to greater volatility.

The Fund will invest in bonds with short- or intermediate-term (five years or less) maturity. Short-term and immediate-term maturity may have additional risks,

including interest rate changes over the life of a bond. The average maturity of the Fund's investments will affect the volatility of the Fund's share price.

The **Intraday NAV** is a symbol representing estimated fair value based on the most recent intraday price of underlying assets. **Volatility** is the annualized standard deviation of index returns. **Sharpe Ratio** is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe Ratio indicates better risk-adjusted performance. **Correlation** indicates the degree to which two investments have historically moved in the same direction and magnitude. **Alpha** is a measure of performance on a risk-adjusted basis. **Credit ratings** are assigned by Nationally Recognized Statistical Rating Organizations based on assessment of the credit worthiness of the underlying bond issuers. The long-term ratings range from AAA (highest) to D (lowest) and are subject to change. Not rated indicates the debtor was not rated, and should not be interpreted as indicating low quality. Futures and other derivatives are not eligible for assigned credit ratings by any NRSRO and are excluded from quality allocations. For more information on rating methodologies, please visit the following NRSRO websites: standardandpoors.com and select "Understanding Ratings" under Rating Resources and moodys.com and select "Rating Methodologies" under Research and Ratings. **Average Yield to Worst** is the lowest of all yield to calls or the yield to maturity.

Effective Duration is a measure of a bond's sensitivity to interest rate changes that reflects the change in a bond's price given a change in yield. This duration measure is appropriate for bonds with embedded options. **Yield to Maturity** is the rate of the return anticipated on a bond if it is held until the maturity date. The **30-Day SEC Yield** is based on a 30-day period and is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period. The **30-Day SEC Unsubsidized Yield** reflects the 30-day yield if the investment adviser were not waiving all or part of its fee or reimbursing the

fund for part of its expenses. Total return would have also been lower in the absence of these temporary reimbursements or waivers. **Beta** is a measure of risk representing how a security is expected to respond to general market movements. **Smart Beta** represents an alternative and selection index based methodology that seeks to outperform a benchmark or reduce portfolio risk, or both. Smart beta funds may underperform cap-weighted benchmarks and increase portfolio risk.

Typically, security classifications used in calculating allocation tables are as of the last trading day of the previous month.

The Global Industry Classification Standard was developed by and is the exclusive property and a service mark of MSCI, Inc. and Standard & Poor's.
