Performance quoted is past performance, and cannot guarantee comparable future results. Current performance may be higher or lower than performance quoted. Visit invesco.com for the most recent month-end performance. Investment returns and principal value will fluctuate and when redeemed, shares may be worth more or less than their original cost. As the result of a reorganization on May 24, 2019, the returns of the fund for periods on or prior to May 24, 2019 reflect performance of the Oppenheimer predecessor fund. The NAV return is based on the net asset value of the Fund and the market return (MKT) is based on the market price per share of the Fund. The price used to calculate MKT is determined by using the midpoint between the highest bid and the lowest offer on the primary stock exchange on which the shares of the Fund are listed for trading when the Fund's NAV is calculated at market close. MKT and NAV assume dividends and capital gain distributions have been reinvested in the Fund at market price and NAV, respectively. Returns less than one year are cumulative.

Special Risks: There are risks involved with investing in ETFs, including possible loss of money. Shares are not actively managed and are subject to risks similar to those of stocks, including those regarding short selling and margin maintenance requirements. Ordinary brokerage commissions apply. The Fund's return may not match the return of the Underlying Index. The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risk associated with an investment in the Fund. Investments focused in a particular sector, such as basic materials, communication services, consumer discretionary and staples, energy, financials, healthcare, industrials, information technology, real estate securities and utilities, are subject to greater risk, and are more greatly impacted by market volatility, than more diversified investments. A value style of investing is subject to the risk that the valuations never improve or that the returns will trail other styles of investing or the overall stock markets. Momentum style of investing is subject to the risk that the securities may be more volatile than the market as a whole or returns on securities that have previously exhibited price momentum are less than returns on other styles of investing. Companies that issue quality stocks may experience lower than expected returns or may experience negative growth, as well as increased leverage, resulting in lower than expected or negative returns to Fund shareholders. There is no assurance that such ETFs will provide low volatility. Stocks of small-capitalization companies tend to be more vulnerable to adverse developments, may be more volatile, and may be illiquid or restricted as to resale than large companies. The Fund is subject to numerous market trading risks, including the potential lack of an active market, losses from trading in secondary markets, and disruption in the creation/redemption process. During stressed market conditions, Shares may become less liquid as result of deteriorating liquidity which could lead to differences in the market price and the underlying value of those Shares. Increased volatility may result from increased cash flows to the Fund and other market participants that continuously or systematically buy large holdings of small- or mid-cap companies, which can drive prices up and down more dramatically. Announcements that a security has been added to a widely followed index may cause the price of that security to increase, and decrease when deleted from the index. The fund may engage in frequent trading of its portfolio securities in connection with the rebalancing or adjustment of the Underlying Index. The Fund is non-diversified and may experience greater volatility than a more diversified investment.

Investment Approach

The Invesco Russell 2000 Dynamic Multifactor ETF (the “Fund”) is based on the Russell 2000 Invesco Dynamic Multifactor Index (the “Index”). The Fund will invest at least 80% of its total assets in the securities that comprise the Index. The Index is constructed using a rules-based approach that re-weights small-cap securities of the Russell 2000 Index according to economic cycles and market conditions, reflected by expansion, slowdown, contraction or recovery. The securities are assigned a multi-factor score from one of five investment styles: value, momentum, quality, low volatility and size. The Fund and Index are reconstituted and rebalanced based on economic indicator signal changes, as frequently as monthly.

P/B Ratio: Price-to-Book Ratio (“P/B”) is the ratio used to compare a stock’s market value to its book value. It is calculated by dividing the current closing price of the stock by the latest quarter’s book value per share.

P/E Ratio (LTM): Price-to-Earnings Ratio (“P/E”) is a valuation ratio of a company’s current share price compared to its actual per-share earnings over the last 12 months. (LTM - Last Twelve Months)

P/S Ratio: Price-to-Sales Ratio (“P/S”) is a valuation ratio of a company’s current share price compared to its actual per-share sales.

Turnover: Turnover ratio is defined as a change in the securities held by the Fund.

Weighted Avg. Mrk. Cap Weighted Median Mrk. Cap: The average market capitalization (weighted) is the weighted average of the market capitalization of each stock in a portfolio or index. In such groups of stocks, larger companies account for a greater portion of the portfolio or index. The median market capitalization (weighted) is the weighted midpoint of the market capitalization in the portfolio or index sorted distribution at which 50% of cumulative weight of the portfolio or index weight is represented.

The Russell 2000 OFI Dynamic Multifactor Index is composed of securities in the Russell 2000 Index that demonstrate greater factor exposure characteristics relative to the broader U.S. equity market. The fund is rebalanced monthly. **Past performance does not guarantee future results.**

The Russell 2000® Index measures the performance of the small-cap segment of the U.S. equity universe. The Russell 2000 Index is a subset of the Russell 3000 Index representing approximately 10% of the total market capitalization of that index. It includes approximately 2000 of the smallest securities based on a combination of their market cap and current index membership. The index is unmanaged and cannot be purchased directly by investors. Index performance is shown for illustrative purposes only and does not predict or depict performance of the Fund. **Past performance does not guarantee future results.**

Shares of Invesco funds are not deposits or obligations of any bank, are not guaranteed by any bank, are not insured by the FDIC or any other agency, and involve investment risks, including the possible loss of the principal amount invested.

Before investing in any of the Invesco funds, investors should carefully consider a fund’s investment objectives, risks, charges and expenses. Fund prospectuses and summary prospectuses contain this and other information about the funds, and may be obtained by asking your financial advisor or visiting invesco.com. Read prospectuses and summary prospectuses carefully before investing.
