Invesco S&P MidCap Momentum ETF

**Fund Description**
The Invesco S&P MidCap Momentum ETF (Fund) is based on the S&P Midcap 400 Momentum Index (Index). The Fund will invest at least 90% of its total assets in the component securities that compose the Index. The Index is composed of securities with 80% of their total assets in the component securities that compose the S&P Midcap 400® Index having the highest “momentum scores,” which are computed by measuring the upward price movements of each security as compared to other eligible stocks within the S&P Midcap 400® Index. The Fund and the Index are rebalanced and reconstituted semi-annually.

Effective at the close of markets on Friday, June 21, 2019, the Fund’s name, investment objective, principal investment strategy and underlying index changed. Please see the Fund’s prospectus for further information.

**Fund Data**
- **Underlying Index Data**
  - S&P MidCap 400 Momentum Index: SPMMUPT
  - Index Provider: S&P Dow Jones Indices, LLC

**Fund Inception:** March 3, 2005

**Shares are not FDIC insured, may lose value and have no bank guarantee.**

Shares are not individually redeemable and owners of the Shares may acquire those Shares from the Fund and tender those Shares for redemption to the Fund in Creation Unit aggregations only, typically consisting of 50,000 Shares.

Index returns do not represent Fund returns. An investor cannot invest directly in an index.

Neither the underlying Index nor the benchmark indexes charge management fees or brokerage expenses, and no such fees or expenses were deducted from the performance shown; nor do any of the indexes lend securities, and no revenues from securities lending were added to the performance shown. In addition, the results actual investors might have achieved would have differed from those shown because of differences in the timing, amounts of their investments, and fees and expenses associated with an investment in the Fund.

S&P MidCap 400 Momentum Index* performance prior to 6/16/2011 reflects that of the original Underlying Index, Dynamic Mid Cap Growth Intellidex® Index. From 6/16/2011 to 5/22/2015, performance reflects that of the previous Underlying Index, RAFI Fundamental Mid Growth Index. From 5/22/2015 to 6/21/2019, reflects that of the previous Underlying Index, Russell Midcap Pure Growth Index. From 6/21/2019 forward, performance reflects that of the Underlying Index, S&P Midcap 400 Momentum Index AND IS NOT INTENDED FOR ANY THIRD PARTY USE.

The RAFI Fundamental Mid Growth Index is composed of common stocks of mid growth US companies based on fundamental weight.

The S&P MidCap 400 Index is designed to measure the performance of 400 mid-sized companies, reflecting the distinctive risk and return characteristics of this market segment.

The Russell Midcap® Index is an unmanaged index considered representative of the mid-cap segment of the US equity universe. The Russell Midcap Pure Growth Index is composed of securities with strong growth characteristics selected from the Russell Midcap® Index. The Russell Midcap® Growth Index is an unmanaged index considered representative of mid-cap growth stocks.

The Dynamic Mid Cap Growth Intellidex™ Index seeks to provide capital appreciation while maintaining consistent and accurate style exposure.

About risk

There are risks involved with investing in ETFs, including possible loss of money. Shares are not actively managed and are subject to risks similar to those of stocks, including those regarding short selling and margin maintenance requirements. Ordinary brokerage commissions apply. The Fund’s return may not match the return of the Underlying Index. The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risk associated with an investment in the Fund.

Investments focused in a particular industry or sector are subject to greater risk, and are more greatly impacted by market volatility, than more diversified investments.

Stocks of medium-sized companies tend to be more vulnerable to adverse developments, may be more volatile than the market as a whole or returns on securities that have previously exhibited price momentum are less than returns on other styles of investing.

The Intraday NAV is a symbol representing estimated fair value based on the most recent intraday price of underlying assets. Volatility is the annualized standard deviation of index returns. Sharpe Ratio is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe Ratio indicates better risk-adjusted performance. Correlation indicates the degree to which two investments have historically moved in the same direction and magnitude. Alpha is a measure of performance on a risk-adjusted basis. Weighted Harmonic Average Stock Price-to-Earnings Ratio (P/E Ratio) is the share price divided by earnings per share. It is measured on a 12-month trailing basis. Weighted Harmonic Average Stock Price-to-Book-Value Ratio (P/B Ratio) is the ratio of a stock’s market price to a company’s net asset value. Weighted Harmonic Average is a method of calculating an average value that lessens the impact of large outliers and increases the impact of small ones. Weighted Average Return on Equity is net income divided by net worth. Weighted Market Capitalization is the sum of each underlying securities’ market value. The 30-Day SEC Yield is based on a 30-day period and is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period. The 30-Day SEC Unsubsidized Yield reflects the 30-day yield if the investment adviser were not waiving all or part of its fee or reimbursing the fund for part of its expenses. Total return would have also been lower in the absence of these temporary reimbursements or waivers. Beta is a measure of risk representing how a security is expected to respond to general market movements. Smart Beta represents an alternative and selection index based methodology that seeks to outperform a benchmark or reduce portfolio risk, or both. Smart beta funds may underperform cap-weighted benchmarks and increase portfolio risk.

Typically, security classifications used in calculating allocation tables are as of the last trading day of the previous month.
