

CVY Invesco Zacks Multi-Asset Income ETF

As of June 30, 2019

Fund Description

The Invesco Zacks Multi-Asset Income ETF (Fund) is based on the Zacks Multi-Asset Income Index (Index). The Fund will invest at least 90% of its total assets in securities and depositary receipts that comprise the Index. The Index is comprised of domestic and international companies, including US listed common stocks, American depositary receipts (ADRs) paying dividends, real estate investment trusts (REITs), master limited partnerships (MLPs), closed-end funds and traditional preferred stocks. The Index is computed using the gross total return, which reflects dividends paid. The Fund and the Index are rebalanced quarterly.

Fund Data

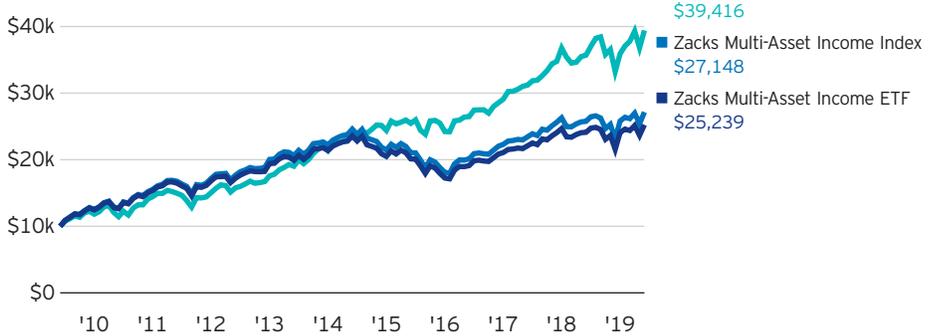

Zacks Multi-Asset Income ETF	CVY
Intraday NAV (IIV)	CYM

Index Provider	Zacks Investment Research, Inc.

Growth of \$10,000

Data beginning 10 years prior to the ending date of June 30, 2019. Fund performance shown at NAV.

Fund Performance & Index History (%)

	YTD	1 year	3 year	5 year	10 year	Fund Inception
Underlying Index						
Zacks Multi-Asset Income Index	17.54	5.35	10.48	2.00	10.50	5.34
Benchmark Index						
S&P 500 Index	18.54	10.42	14.19	10.71	14.70	8.76
Fund						
NAV	17.07	4.66	9.70	1.38	9.70	4.50
Market Price	17.28	4.42	9.67	1.35	9.66	4.49

Returns less than one year are cumulative. Performance data quoted represents past performance. Past performance is not a guarantee of future results; current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and Shares, when redeemed, may be worth more or less than their original cost. See invesco.com to find the most recent month-end performance numbers. Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times. Fund performance reflects fee waivers, absent which, performance data quoted would have been lower.

As the result of a reorganization on April 6, 2018, the returns presented reflect performance of the Guggenheim predecessor fund. Invesco is not affiliated with Guggenheim.

10-Year Index Statistics

	Alpha	Beta	Correlation	Sharpe Ratio	Volatility (%)
Zacks Multi-Asset Income Index	-	-	-	0.81	12.30
S&P 500 Index	-1.92	0.87	0.90	1.12	12.73

Alpha, beta and correlation are that of the underlying index.

Fund Inception: Sept. 21, 2006

Shares are not FDIC insured, may lose value and have no bank guarantee.

Index returns do not represent Fund returns. An investor cannot invest directly in an index.

Neither the underlying Index nor the benchmark indexes charge management fees or brokerage

expenses, and no such fees or expenses were deducted from the performance shown; nor do any of the indexes lend securities, and no revenues from securities lending were added to the performance shown. In addition, the results actual investors might have achieved would have differed from those shown because of differences in the timing, amounts of their investments, and fees and expenses associated with an

investment in the Fund.

The Dow Jones U.S. Select Dividend Index represent the country's leading stocks by dividend yield.

Shares are not individually redeemable and owners of the Shares may acquire those Shares from the Fund and tender those Shares for redemption to the Fund in Creation Unit aggregations only, typically consisting of 50,000 Shares.

and demand risk, depletion risk and exploration risk. MLPs are also subject to the risk that regulatory or legislative changes could eliminate the tax benefits enjoyed by MLPs which could have a negative impact on the after-tax income available for distribution by the MLPs and/or the value of the portfolio's investments.

A company's preferred stock generally pays dividends only after the company makes required payments to holders of its bonds and other debt. The value of preferred stock will usually react more strongly than bonds and other debt to actual or perceived changes in the company's financial condition or prospects.

The **Intraday NAV** is a symbol representing estimated fair value based on the most recent intraday price of underlying assets. **Volatility** is the annualized standard deviation of index returns. **Beta** is a measure of relative risk and the slope of regression. **Sharpe Ratio** is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe Ratio indicates better risk-adjusted performance. **Correlation** indicates the degree to which two investments have historically moved in the same direction and magnitude. **Alpha** is a measure of performance on a risk-adjusted basis. **Weighted Harmonic Average Stock Price-to-Earnings Ratio (P/E Ratio)** is the share price divided by earnings per share. It is measured on a 12-month trailing basis. **Weighted Harmonic Average Stock Price-to-Book-Value Ratio (P/B Ratio)** is the ratio of a stock's market price to a company's net asset value. **Weighted Average Return on Equity** is net income divided by net worth. **Weighted Market Capitalization** is the sum of each underlying securities' market value. The **30-Day SEC Yield** is based on a 30-day period and is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period. The **30-Day SEC Unsubsidized Yield** reflects the 30-day yield if the investment adviser were not waiving all or part of its fee or reimbursing the fund for part of its expenses. Total return would have also been lower in the absence of these temporary reimbursements or waivers.

Typically, security classifications used in calculating allocation tables are as of the last trading day of the

About risk

Depository receipts involve many of the same risks as a direct investment in foreign securities, and issuers of certain depository receipts are under no obligation to distribute shareholder communications to the holders or to pass through to them any voting rights with respect to the deposited securities.

Investments focused in a particular sector, such as consumer discretionary and financial, are subject to greater risk, and are more greatly impacted by market volatility, than more diversified investments.

REITs are subject to additional risks than general real estate investments. A REIT's value can depend on the structure and cash flow it generates. REITs concentrated in a limited number or type of properties, investments or narrow geographic areas are subject to the risks affecting those properties or areas to a greater extent than less concentrated investments. REITs are subject to certain requirements under federal tax law and may have expenses, including advisory and administration expenses. As a result, Fund will incur its pro rata share of the underlying expenses.

The fund may engage in frequent trading of its portfolio securities in connection with the rebalancing or adjustment of the Underlying Index.

There are risks involved with investing in ETFs, including possible loss of money. Shares are not actively managed and are subject to risks similar to those of stocks, including those regarding short selling and margin maintenance requirements. Ordinary brokerage commissions apply. The Fund's return may not match the return of the Underlying Index. The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risk associated with an investment in the Fund.

The Fund is non-diversified and may experience greater volatility than a more diversified investment.

The risks of investing in securities of foreign issuers can include fluctuations in foreign currencies, political and economic instability, and foreign taxation issues.

Stocks of small and mid-sized companies tend to be more vulnerable to adverse developments, may be more volatile, and may be illiquid or restricted as to resale.

Because the Fund may invest in other investment companies, it's subject to the risks associated with the investment company and its investment performance may depend on the underlying investment company's performance. Moreover, the Fund and its shareholders will incur its pro rata share of the underlying investment companies' expenses, which will reduce the Fund's performance, and the purchase of shares of some investment companies.

Most MLPs operate in the energy sector and are subject to the risks generally applicable to companies in that sector, including commodity pricing risk, supply
