

Investing in the Fundamentals of the Energy Renaissance

Quick Facts

Innovations in natural gas and oil production have turned the US into the world's top producer of oil and natural gas. We believe many midstream master limited partnerships (MLPs) are now undervalued and will continue to be strong investment options. Investing for the long term, we believe Invesco Oppenheimer SteelPath MLP mutual funds are well-positioned to take advantage of current conditions by utilizing a bottom-up research process which invests in companies with attractive total return and growth potential while seeking to limit risk.

Midstream Price-to-Distributable Cash Flow Is at a Historic Low

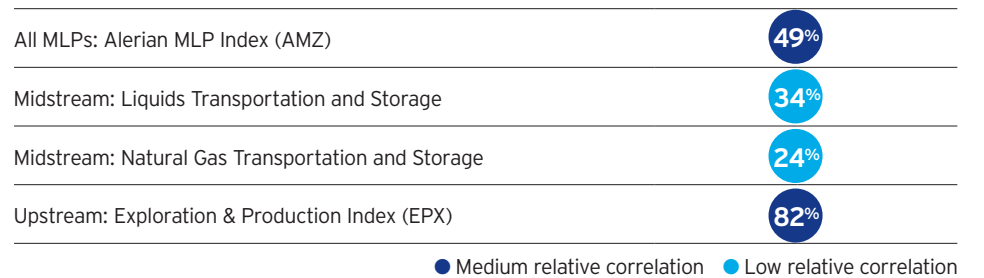

In the United States, crude oil, condensates and natural gas liquids are expected to top 18 million barrels a day over the next five years, up from 13.2 million barrels a day in 2017. A helpful metric to value MLPs is price/distributable cash flow. Lower p/dcf multiples may indicate that the company or asset class is currently being undervalued.¹

Correlation of Midstream MLPs to Commodities Is Low Over the Long Term

While the value of some midstream MLPs may exhibit higher correlation and move in the same direction to oil prices over volatile short-term periods, correlations over the longer time periods are low. In midstream sub-sectors, long-term correlations are particularly low, relative to upstream producers.

Energy MLP Correlation to Crude Oil (WTI) %, Over a 3-Year Period²

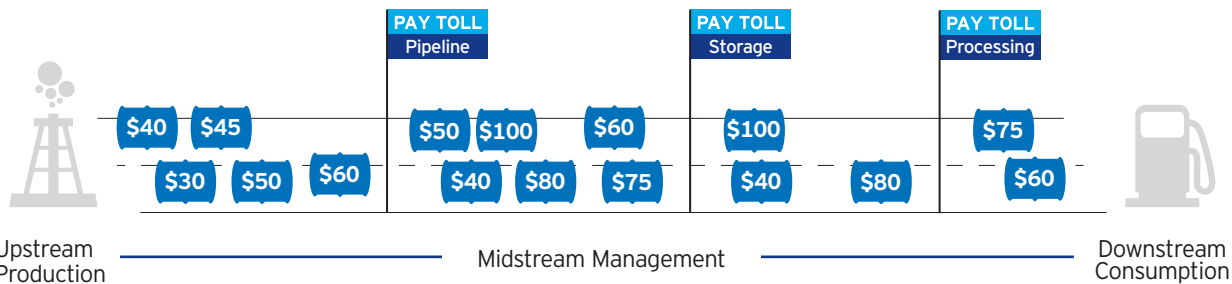

Two Reasons Why the Fundamentals of Midstream MLPs Remain Strong

- Over 90% of the cash flow from midstream MLPs is derived from fee-based businesses through a "toll-road" approach. In many cases, pre-existing contracts may protect this fee revenue from commodity volume fluctuations.³

Midstream MLPs Collect Their Revenue Like a Toll Road

PAY TOLL Fees Collected for Managing Energy
Midstream MLPs collect revenue as they move, store or process energy.

Revenue Driven by Volume, Not Prices
The volume of traffic on the road, not the price of what's being transported, determines the amount of toll revenue.

- MLPs have focused on strengthening distribution coverage in recent years to a point of largely being able to self-fund growth capital expenditure (Capex) going forward.⁴

Distribution Coverage

1 Source: IEA, September 2018. Past performance is no guarantee of future results.

2 Sources: Bloomberg L.P., Capital IQ, as of 6/30/19.

3 Source: Wells Fargo, March 2019.

4 Sources: Wells Fargo, company filings as of March 2019.

Growth spending, or Capex (Capital Expenditures) is representative of the total amount of money that is spent by MLPs.

Invesco Oppenheimer SteelPath

Quick Facts

The SteelPath investment team has over 70 years of combined MLP experience—the portfolio managers began working in the MLP space in the 1990s and launched the first MLP open-end mutual funds in 2010.

Performance quoted is past performance and cannot guarantee comparable future results. Current performance and or expenses may be higher or lower. Visit oppenheimerfunds.com for the most recent month-end performance. Investment returns and principal value will vary; you may have a gain or loss when you sell shares. No contingent deferred sales charge (CDSC) will be imposed on redemptions of Class C shares following one year from the date shares were purchased. Performance figures reflect reinvested distributions and changes in share price and the effect of the max. sales charge unless otherwise stated. Class A (with sales charge) returns reflect a 5.50% max. sales charge. Class R6 and Y shares are not subject to sales charge. Fund performance reflects fee waivers, absent which, performance data quoted would have been lower. Total annual fund operating expenses after any contractual fee waivers and/or expense reimbursements by the adviser in effect through May 28, 2021. See current prospectus for more information. As the result of a reorganization on May 24, 2019, the returns of the fund for periods on or prior to May 24, 2019 reflect performance of the Oppenheimer predecessor fund. Share class returns will differ from the predecessor fund due to a change in expenses and sales charges. Class I shares were reorganized into Class R6 shares. R6 shares are primarily intended for retirement plans that meet certain standards and for institutional investors. Y shares are generally intended for certain investors, such as wrap-fee based programs or commissionable brokerage platforms that charge sales commission. The net expense ratio is also net of deferred income tax expense, if applicable, which represents an estimate of the funds' potential tax liability. This expense may vary from year to year. Because the funds' deferred income tax expense is excluded from the expense cap, the funds' net expenses are increased by the amount of this expense.

¹ Inception date for Invesco Oppenheimer SteelPath MLP Alpha Fund is 3/31/10, 8/25/11 and 6/28/13 for A and Y shares, C shares and R6 shares, respectively. Inception date for Invesco Oppenheimer SteelPath MLP Income Fund is 3/31/10, 6/10/11 and 6/28/13 for A and Y, C shares and R6 shares, respectively. Inception date for Invesco Oppenheimer SteelPath MLP Select 40 Fund is 3/31/10, 7/14/11 and 6/28/13 for A and Y shares, C shares and R6 shares, respectively. Inception date for Invesco Oppenheimer SteelPath MLP Alpha Plus is 12/30/11, 2/6/12, 5/22/12 and 6/28/13 for Y, A, C and R6 shares, respectively. Inception date for Invesco Oppenheimer SteelPath MLP & Energy Infrastructure Fund is 11/6/17 for all share classes.

The Alerian MLP Index (AMZ) is a float-adjusted, capitalization-weighted index measuring master limited partnerships, whose constituents represent approximately 85% of total float-adjusted market capitalization. The index is unmanaged and cannot be purchased directly by investors. Index performance is shown for illustrative purposes only and does not predict or depict the performance of any Invesco fund. **Past performance is no guarantee of future results.** Investing in MLPs involves additional risks as compared to the risks of investing in common stock, including risks related to cash flow, dilution and voting rights. Each fund's investments are concentrated in the energy infrastructure industry with an emphasis on securities issued by MLPs, which may increase volatility. Energy infrastructure companies are subject to risks specific to the industry such as fluctuations in commodity prices, reduced volumes of natural gas or other energy commodities, environmental hazards, changes in the macroeconomic or the regulatory environment or extreme weather. MLPs may trade less frequently than larger companies due to their smaller capitalizations which may result in erratic price movement or difficulty in buying or selling. Additional management fees and other expenses are associated with investing in MLP funds.

Invesco Oppenheimer SteelPath MLP funds are subject to certain MLP tax risks. An investment in an Invesco Oppenheimer SteelPath MLP fund does not offer the same tax benefits of a direct investment in an MLP. The funds are organized as Subchapter "C" Corporations and are subject to US federal income tax on taxable income at the currently effective statutory tax rate as well as state and local income taxes. The potential tax benefit of investing in MLPs depends on them being treated as partnerships for federal income tax purposes. If the MLP is deemed to be a corporation, its income would be subject to federal taxation at the entity level, reducing the amount of cash available for distribution which could result in a reduction of the fund's value. MLP funds may accrue deferred income taxes for future tax liabilities associated with the portion of MLP distributions considered to be a tax-deferred return of capital and for any net operating gains as well as capital appreciation of its investments. This deferred tax liability, if applicable, is reflected in the daily NAV and as a result an MLP fund's after-tax performance could differ significantly from the underlying assets even if the pre-tax performance is closely tracked.
