

Invesco Growth and Income Fund

Q2 2025

Key takeaways

1 The fund outperformed its benchmark

Stock selection and an overweight in information technology (IT) was the largest contributor to relative return. Selection in industrials, communication services and consumer staples also aided relative results. Health care and energy were key detractors from relative return.

2 The team added several new holdings amid volatility during the quarter

We purchased new holdings in the consumer staples, consumer discretionary, IT and industrials sectors. These purchases were funded by corresponding sales in IT and industrials.

3 Value stocks lagged growth stocks

Value stocks underperformed growth in the second quarter as the Russell 1000 Value Index returned 3.79% and the Russell 1000 Growth Index returned 17.84%.

Investment objective

The fund seeks income and long-term growth of capital.

Sergio Marcheli

Manager perspective and outlook

- US financial markets faced heightened volatility in the second quarter following the Trump administration's surprise announcement of a broad tariff policy that imposed reciprocal tariffs on imports from all countries.
- Equity markets declined early in the quarter, with several indexes briefly entering correction territory. However, sentiment appeared to quickly rebound. By quarter end, the S&P 500 Index reached an all-time high and delivered a return of 10.94% for the quarter.
- Artificial intelligence (AI) remained a dominant theme, driving strong returns in IT and communication services, while energy and health care lagged.
- Despite a pause on most tariffs, trade policy has remained a significant overhang. Weakening economic data has indicated a slowdown, and first quarter real gross domestic product (GDP) was revised down to -0.5%, its first contraction since 2022. Forecasts for 2025 GDP growth have also dimmed.
- However, uncertainty may also create opportunities. Recent market declines have led to what we see as attractive valuations for certain sectors and stocks.
- Regardless of the economic environment, we continue to focus on our fundamental work so we can move quickly to take advantage of new opportunities as they become available.
- As always, we seek to invest in companies with attractive valuations and strong fundamentals, qualities we believe will ultimately be reflected in those companies' stock prices.

Portfolio positioning

New holdings:

Nike: This iconic athleticwear brand has lagged in recent years, losing market share to fashion-focused entrants. The company also pulled back from wholesale distribution channels and overemphasized digital sales, which hurt earnings and profit margins. A new CEO, returning from retirement, has been refocusing the company on sports, athletes and traditional retail. While tariffs have remained a headwind, we believe the CEO can drive a turnaround.

Proctor & Gamble: This multinational consumer goods company specializes in a wide range of household and personal care products. In our view the company has a strong balance sheet and is an innovator, which has helped it capture market share. We view the company as a good compounding, offering a better risk/reward profile than other competitors within the industry.

NVIDIA: The company designs and manufactures computer graphics processors, chipsets and related multimedia software, along with processing units (GPUs) that are critical to AI. The stock had rallied earlier in the year, but China tariffs and seemingly weaker sentiment toward AI caused a pullback in the second quarter, giving us what we saw as an attractive entry point. We believe NVIDIA still has strong long-term growth potential.

Vertiv: The company manufactures electrical power, thermal management and other equipment for data centers. Shares had risen on AI-driven demand but fell as news of DeepSeek, a lower-cost AI model, raised concerns about future infrastructure needs. We viewed the selloff as temporary and used it as a buying opportunity.

Eliminated Holdings:

CSX: The rail company has been improving service and expanding intermodal (which combines truck and rail transport), but volumes have remained weak. We believe progress will take longer than previously expected and sold the position to fund better opportunities.

JB Hunt Transport Services: Freight market weakness and falling truckload rates have been headwinds. The company has been under-earning, and recovery may take time. We exited the stock due to near-term risks.

Stanley Black & Decker: While inventory and profit margins have improved, weak consumer demand and tariff uncertainty have shifted its risk/reward profile. We sold the stock in favor of stronger opportunities.

Marvell: The company is a key player in data infrastructure semiconductors. Although we still see AI-related upside, the stock has underperformed peers. We sold the position to fund our purchase of NVIDIA, which we consider a higher quality company in the industry.

Sector breakdown (% of total net assets)

■ Fund ■ Russell 1000 Value Index (USD)

Top industries (% of total net assets)

■ Fund ■ Russell 1000 Value Index (USD)

Top contributors (%)

Issuer	Return	Contrib. to return
Microchip Technology Incorporated	46.50	0.89
Johnson Controls International plc	32.32	0.74
Microsoft Corporation	32.75	0.73
Vertiv Holdings Co.	90.38	0.72
Oracle Corporation	56.96	0.61

Top detractors (%)

Issuer	Return	Contrib. to return
UnitedHealth Group Incorporated	-40.01	-0.68
Fiserv, Inc.	-21.93	-0.51
Bristol-Myers Squibb Company	-23.25	-0.35
Chevron Corporation	-13.35	-0.30
ConocoPhillips	-13.81	-0.27

Performance highlights

Stock selection and an overweight in IT was the largest contributor to relative performance. Selection in industrials, communication services and consumer staples also aided relative return. Stock selection in health care was the largest detractor during the quarter as health care providers came under pressure. An overweight in energy also hurt relative return.

Contributors to performance

Microchip Technology: The semiconductor developer reported better-than-expected earnings and revenues and provided upbeat guidance for future revenues and margins.

Johnson Controls International: The company, a global leader in smart building technologies and solutions, reported a strong quarter with better-than-expected earnings and organic sales growth.

Microsoft: The software maker delivered better-than-expected earnings, driven by double-digit revenue growth and continued momentum in its Azure cloud platform.

Vertiv: Shares of the company rallied in the second quarter amid seemingly improving sentiment toward AI-related stocks.

Oracle: As its cloud infrastructure revenue growth surged in the second quarter, Oracle also signed multiple large cloud services

agreements that we believe should provide robust revenue growth going forward.

Detractors from performance

ConocoPhillips: Falling oil prices and poor sentiment, along with concerns about recent asset sales and the company's strategic direction, weighed on shares during the quarter.

Chevron: Shares of the oil giant declined due to a combination of lower oil prices, reduced profitability in refined product sales and loss of high-margin Venezuelan production after its US license expired. Legal uncertainty surrounding its Hess (not a fund holding) acquisition seemingly further dampened investor sentiment.

Bristol-Myers Squibb: The drugmaker's shares declined primarily due to generic competition affecting key legacy drugs, as well as ongoing concerns about the company's long-term growth prospects.

Fiserv: Although Fiserv reported strong earnings, shares declined as investors appeared to react negatively to weaker-than-expected revenue growth.

UnitedHealth Group: The health insurer reported disappointing earnings due to higher Medicare Advantage cost trends and a less profitable member mix.

Standardized performance (%) as of June 30, 2025

		Quarter	YTD	1 Year	3 Years	5 Years	10 Years	Since Inception
Class A shares inception: 08/01/46	NAV	6.52	5.95	14.41	14.48	16.50	9.24	9.55
	Max. Load 5.5%	0.67	0.14	8.13	12.34	15.19	8.62	9.47

Expense ratios per the current prospectus: Class A: Net: 0.78%, Total: 0.78%; Class R6: Net: 0.42%, Total: 0.42%; Class Y: Net: 0.53%, Total: 0.53%.

Performance quoted is past performance and cannot guarantee comparable future results; current performance may be lower or higher. Visit invesco.com for the most recent month-end performance. Performance figures reflect reinvested distributions and changes in net asset value (NAV). Investment return and principal value will vary so that you may have a gain or a loss when you sell shares. Returns less than one year are cumulative; all others are annualized. Index source: RIMES Technologies Corp. Had fees not been waived and/or expenses reimbursed in the past, returns would have been lower. Performance shown at NAV does not include the applicable front-end sales charge, which would have reduced the performance.

Class Y and R6 shares have no sales charge; therefore performance is at NAV. Class Y shares are available only to certain investors. Class R6 shares are closed to most investors. Please see the prospectus for more details.

Holdings are subject to change and are not buy/sell recommendations. Attribution methodology notes: The attribution provides analysis of the effects of several portfolio management decisions, including allocation and security selection. Securities classified as "Other" may include non-equity securities, derivatives, and securities for which a sector classification may not be appropriate. The portfolio is actively managed and portfolio holdings are subject to change. The percentage weights represented for the portfolio are dollar weighted based on market value. **Market allocation effect** shows the excess contribution due to sector/market allocation. A positive allocation effect implies that the choice of sector weights in the portfolio added value to the portfolio contribution with respect to the benchmark and vice versa. **Selection effect** shows the excess contribution due to security selection. A positive selection effect implies that the choice of stocks in the portfolio added value to the portfolio contribution with respect to the benchmark and vice versa. **Total effect** is the difference in contribution between the benchmark and portfolio. **Past performance does not guarantee future results.**

Unless otherwise specified, all information is as of 06/30/25. Unless stated otherwise, Index refers to Russell 1000 Value Index (USD). Asset allocation/diversification does not guarantee a profit or eliminate the risk of loss.

About Risk

Convertible securities may be affected by market interest rates, the risk of issuer default, the value of the underlying stock, or the issuer's right to buy back the convertible securities. Derivatives may be more volatile and less liquid than traditional investments and are subject to market, interest rate, credit, leverage, counterparty, and management risks. An investment in a derivative could lose more than the cash amount invested. The risks of investing in securities of foreign issuers can include fluctuations in foreign currencies, political and economic instability, and foreign taxation issues. The Fund's value may be affected by changes in the stock markets. Stock markets may experience significant short-term volatility and may fall or rise sharply at times. Adverse events in any part of the equity or fixed-income markets may have unexpected negative effects on other market segments. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The investment techniques and risk analysis used by the portfolio managers may not produce the desired results. Stocks of small and medium-sized companies tend to be more vulnerable to adverse developments, may be more volatile, and may be illiquid or restricted as to resale. A value style of investing is subject to the risk that the valuations never improve or that the returns will trail other styles of investing or the overall stock markets. The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risks associated with an investment in the Fund. The opinions expressed are those of the fund's portfolio management, are based on current market conditions and are subject to change without notice. These opinions may differ from those of other Invesco investment professionals.

This does not constitute a recommendation of any investment strategy or product for a particular investor. Investors should consult a financial professional before making any investment decisions.

Note: Not all products available at all firms. Financial professionals, please contact your home office.

The fund holdings are organized according to the Global Industry Classification Standard, which was developed by and is the exclusive property and service mark of MSCI Inc. and Standard & Poor's.

* **Alpha** (cash adjusted) is a measure of performance on a risk-adjusted basis. **Beta** (cash adjusted) is a measure of relative risk and the slope of regression. **Sharpe Ratio** is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe ratio indicates better risk-adjusted performance. **Information Ratio** is a measurement of portfolio returns beyond the returns of a benchmark, usually an index, compared to the volatility of those returns. **Standard deviation** measures a fund's range of total returns and identifies the spread of a fund's short-term fluctuations. **Tracking Error** is defined as the expected standard deviation of a portfolio's excess return over the benchmark index return. The **up and down capture** measures how well a manager was able to replicate or improve on periods of positive benchmark returns and how severely the manager was affected by periods of negative benchmark returns. **Maximum Drawdown** is the maximum observed loss from a high to a low of a portfolio, before a new high is attained. Maximum drawdown is an indicator of downside risk over a specified time period. **Weighted Average Market Cap** is a measure of the average size of company held in a portfolio. The percentage of the portfolio invested each company, or its weight, is multiplied by its size (market capitalization). An average of the weighted size of all companies held is then calculated. **Price/earnings** measures the price per share relative to the earnings per share of the company while excluding extraordinary items. **Price to book** measures the firm's capitalization (market price) to book value. **Est. 3-5 year EPS (Earning per share) growth** measures the earning per share growth from FY3 to FY5. **ROE** is the Return on Equity that measures the fund's annual return relative to total shareholders' equity. This ratio evaluates how quickly investments can be turned into profits. **Long-term debt to capital** measures a fund's financial leverage by calculating the proportion of long-term debt used to finance its assets relative to the amount of equity used for the same purpose. A higher ratio indicates higher leverage. **Operating margin** measures the profit a fund makes for every dollar of sales after paying the variable expenses. **Contribution to Return** measures the performance impact from portfolio holdings over a defined time period. It takes into account both weight and performance of the portfolio holdings. Contribution to Return is calculated at security level.
