

Invesco Quality Income Fund

Q1 2025

Key takeaways

- 1 US bond yields fell due to economic and policy uncertainty**

During the quarter, yields fell by 0.30% to 0.40% across the two- to 10-year maturity segment of the US Treasury yield curve.
- 2 Inflation exceeded US Federal Reserve (Fed) expectations, yet long-term outlook remains stable**

Despite elevated inflation, long-term expectations have remained well anchored, indicating to us confidence in future interest rate stability.
- 3 Market appeared to raise expectations for 2025 interest rate cuts**

As of quarter end, interest rate futures forecast a total of three Fed rate cuts of 0.25% each in 2025.

Investment objective

The fund seeks to provide a high level of current income, with liquidity and safety of principal.

Fund facts

Manager perspective and outlook

- Structured credit markets underperformed Treasuries this quarter but held up better than investment grade corporates.
- The fund remained overweight in Agency mortgage-backed securities (MBS) where valuations still look very attractive to us. Yield spreads between Agency MBS and Treasuries appear attractive when compared to corporate bonds where credit spread levels are tight. Additionally, expectations for Fed easing should in our view steepen the yield curve and reduce interest rate volatility, which would benefit Agency MBS performance.

Portfolio characteristics*

Average duration (years)	5.72
Weighted average life (years)	7.87
Average weighted coupon (%)	2.83
30-day SEC yield (Class A shares)	3.10
30-day SEC unsubsidized yield (Class A shares)	3.09

Portfolio positioning

We continue to overweight Agency MBS relative to the benchmark based on what we consider attractive valuations, improving technical (supply/demand) conditions and expectations for lower volatility and a steeper yield curve as Fed rate cuts eventually occur. We view 30-year mortgages with 2.5% and 3% coupons and 30-year Agency mortgages with higher coupons (5.0% to 6.0%) as attractive from a valuation standpoint. Portfolio overweights are concentrated in those coupons. In contrast, the fund is underweight in mortgages with 1.5% and 2.0% coupons, where valuations are much less attractive to us. The fund's exposure to securities not in the index is focused on pockets of opportunity we find attractive across non-Agency MBS, commercial mortgage-backed securities (CMBS) and asset-backed securities (ABS).

Quality breakdown (% total)

Investment categories (%)

	Portfolio	Index
Securitized	118.51	100.00
Agency MBS	109.50	100.00
Non-Agency MBS	5.76	0.00
CMBS	2.08	0.00
ABS	1.17	0.00
Cash & Cash Equivalent	-18.51	0.00
Derivatives & FX	0.00	0.00

Performance highlights

Invesco Quality Income Fund Class A shares at net asset value (NAV) outperformed its style-specific benchmark, the Bloomberg US Mortgage-Backed Securities Index.

Agency MBS market during the quarter, benefited relative performance. Additionally, the fund's ABS holdings outperformed Treasuries this quarter.

Contributors to performance

An overweight in higher coupon Agency MBS, which were the best performing part of the

Detractors from performance

There were no material detractors from relative performance this quarter.

Standardized performance (%) as of March 31, 2025

		Quarter	YTD	1 Year	3 Years	5 Years	10 Years	Since Inception
Class A shares inception: 05/31/84	NAV	2.97	2.97	5.16	0.29	-0.26	0.98	5.30
	Max. Load 4.25%	-1.38	-1.38	0.66	-1.17	-1.13	0.54	5.19

Total return ranking vs. Morningstar Intermediate Government category (Class A shares at NAV)		-	-	42% (83 of 228)	53% (84 of 216)	17% (32 of 205)	39% (57 of 170)	-

Expense ratios per the current prospectus: Class A: Net: 0.86%, Total: 0.86%; Class R6: Net: 0.51%, Total: 0.51%; Class Y: Net: 0.62%, Total: 0.62%.

Performance quoted is past performance and cannot guarantee comparable future results; current performance may be lower or higher. Visit [invesco.com](https://www.invesco.com) for the most recent month-end performance. Performance figures reflect reinvested distributions and changes in net asset value (NAV). Investment return and principal value will vary so that you may have a gain or a loss when you sell shares. Returns less than one year are cumulative; all others are annualized. Performance shown prior to the inception date of Class R6 shares is that of Class A shares and includes the 12b-1 fees applicable to Class A shares. Performance includes litigation proceeds. Had these proceeds not been received, total return would have been lower. Index source: RIMES Technologies Corp. Had fees not been waived and/or expenses reimbursed in the past, returns would have been lower. Performance shown at NAV does not include the applicable front-end sales charge, which would have reduced the performance.

Class Y and R6 shares have no sales charge; therefore performance is at NAV. Class Y shares are available only to certain investors. Class R6 shares are closed to most investors. Please see the prospectus for more details.

Unless otherwise specified, all information is as of 03/31/25. Unless stated otherwise, Index refers to Bloomberg US MBS Index.

Asset allocation/diversification does not guarantee a profit or eliminate the risk of loss.

The Bloomberg U.S. Mortgage Backed Securities Index represents mortgage-backed pass-through securities of Ginnie Mae (GNMA), Fannie Mae (FNMA), and Freddie Mac (FHLMC). An investment cannot be made directly in an index.

About Risk

The Fund may use leverage to seek to enhance income, which creates the likelihood of greater volatility of the Fund's shares and may also impair the ability to maintain its qualification for federal income tax purposes as a regulated investment company.

An issuer may be unable to meet interest and/or principal payments, thereby causing its instruments to decrease in value and lowering the issuer's credit rating.

Derivatives may be more volatile and less liquid than traditional investments and are subject to market, interest rate, credit, leverage, counterparty, and management risks. An investment in a derivative could lose more than the cash amount invested.

Dollar roll transactions involve the risk that the market value and yield may decline below the price of the mortgage-related securities that have been sold and are required to be repurchased.

Interest rate risk refers to the risk that bond prices generally fall as interest rates rise and vice versa.

Mortgage- and asset-backed securities are subject to prepayment or call risk, which is the risk that the borrower's payments may be received earlier or later than expected due to changes in prepayment rates on underlying loans. Securities may be prepaid at a price less than the original purchase value.

Obligations issued by US Government agencies and instrumentalities may receive varying levels of support from the government, which could affect the fund's ability to recover should they default.

The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risks associated with an investment in the Fund.

The opinions expressed are those of the fund's portfolio management, are based on current market conditions and are subject to change without notice. These opinions may differ from those of other Invesco investment professionals.

Ratings source: Standard & Poor's Rating Services (S&P), Moody's Investor Services (Moody's), Fitch Ratings (Fitch), Kroll Bond Rating Agency, Inc (Kroll), DBRS Limited (DBRS) or Morningstar Credit Ratings LLC (Morningstar), as applicable. A credit rating is an assessment provided by a nationally recognized statistical rating organization (NRSRO) of the creditworthiness of an issuer with respect to debt obligations, including specific securities, money market instruments or other debts. Ratings are measured on a scale that generally ranges from AAA (highest) to D (lowest); ratings are subject to change without notices. Ratings are initially measured by taking the middle of three or lower of two ratings from Moody's, S&P, or Fitch at a security level where applicable. Securities not rated by Moody's, S&P or Fitch are measured by taking the middle of three or lower of two ratings from Kroll, DBRS, or Morningstar. Not Rated indicates that the debtor was not rated and should not be interpreted as indicating low quality. For more information on rating methodologies, please visit www.standardandpoors.com and select 'Understanding Credit Ratings' under Rating Resources 'About Ratings' on the homepage; www.ratings.moody.com and select 'Rating Methodologies' under Research and Ratings on the homepage; www.fitchratings.com and select 'Ratings Definitions Criteria' under 'Resources' on the homepage; www.krollbondratings.com and select 'Methodologies' under Understanding Ratings on the homepage; www.dbrs.com and select 'Understanding Ratings' on the homepage; ratingagency.morningstar.com and select 'Methodologies and Guidelines' under Ratings/Surveillance on the homepage.

* **30-day SEC yield** is based on a 30-day period and is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period. **30-day SEC unsubsidized yield** reflects the 30-day yield if the investment adviser were not waiving all or part of its fee or reimbursing the fund for part of its expenses. Total return would have also been lower in the absence of these temporary reimbursements or waivers. **Effective duration** is the managers' estimate of a bond fund's price sensitivity to changes in interest rates. This measure takes into account mortgage prepayments, puts, adjustable coupons and potential call dates.
