Risk Positioning

	Strategic Position	Tactical Position
Precious Metals	25% Underweight	
Agriculture	25% Overweight	
Energy	25% Overweight	
Industrial Metals	25% Underweight	

The fund's strategic allocation targets an equal risk contribution within and across each of the portfolio's four commodity complexes to the overall portfolio risk. Tactical positioning, which is applied monthly, seeks to overweight, underweight or maintain those strategic positions depending on a select group of factors such as supply and demand, the current economic environment and short- and intermediate-term price movements.

An actively managed strategy that provides exposure to commodity markets. The goal of risk balancing is to provide greater diversification and less downside risk than commodity indexes.

Performance quoted is past performance and cannot guarantee future results; current performance may be lower or higher. Visit invesco.com/performance for the most recent month-end performance. Performance figures reflect reinvested distributions and changes in net asset value (NAV). Investment return and principal value will vary, and you may have a gain or a loss when you sell shares. No contingent deferred sales charge (CDSC) will be imposed on redemptions of Class C shares following one year from the date shares were purchased.

Performance shown at NAV does not include applicable CDSC or front-end sales charges, which would have reduced the performance. Class Y shares have no sales charge; therefore, performance is at NAV. Returns less than one year are cumulative; all others are annualized. Fund performance reflects any applicable fee waivers and/or expense reimbursements. Had the adviser not waived fees and/or reimbursed expenses currently or in the past, returns would have been lower. See current prospectus for more information. Index returns do not reflect any fees, expenses, or sales charges.

Asset allocation/diversification does not guarantee a profit or eliminate the risk of loss.

The Bloomberg Commodity Index is designed to be a liquid and diversified benchmark for the commodity futures market. It is a rolling index composed of futures contracts on 19 physical commodities traded on US exchanges. The index was known as the Dow Jones UBS Commodity Index Total ReturnSM prior to July 1, 2014. An investment cannot be made directly in an index.

Overall Morningstar Rating™
(Class A shares as of
March 31, 2018)

Ratings are based on a risk-adjusted return measure that accounts for variation in a fund's monthly performance, placing more emphasis on downward variations and rewarding consistent performance. Open-end mutual funds and exchange-traded funds are considered a single population for comparison purposes. Ratings are calculated for funds with at least a three year history. The overall rating is derived from a weighted average of three-, five- and 10-year rating metrics, as applicable, excluding sales charges and including fees and expenses. Had fees not been waived and/or expenses reimbursed currently or in the past, the Morningstar rating would have been lower. Class A shares received 4 stars for the overall, 4 stars for the three years and 4 stars for the five years. The fund was rated among 109, 109 and 87 funds within the Morningstar Commodities Broad Basket Category for the overall period, three and five years, respectively.

Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results. Ratings are as of the most recent quarter end and are subject to change every month. The top 10% of funds in a category receive five stars, the next 22.5% four stars, the next 35% three stars, the next 22.5% two stars and the bottom 10% one star. Ratings for other share classes may differ due to different performance characteristics.

About Risk

Commodities may subject an investor to greater volatility than traditional securities such as stocks and bonds and can fluctuate significantly based on weather, political, tax, and other regulatory and market developments.

Commodity-linked notes may involve substantial risks, including risk of loss of a significant portion of principal and risks resulting from lack of a secondary trading market, temporary price distortions, and counterparty risk.

Changes in the value of two investments or asset classes may not track or offset each other in the manner anticipated by the portfolio managers, which may inhibit their risk allocation process from achieving its investment objective.

Derivatives may be more volatile and less liquid than traditional investments and are subject to market, interest rate, credit, leverage, counterparty and management risks. An investment in a derivative could lose more than the cash amount invested.

An investment in exchange-traded funds (ETFs) may trade at a discount to net asset value, fail to develop an active trading market, halt trading on the listing exchange, fail to track the referenced index, or

hold troubled securities. ETFs may involve duplication of management fees and certain other expenses. Certain of the ETFs the fund invests in are leveraged, which can magnify any losses on those investments.

Exchange-traded notes (ETNs) are subject to credit risk of the issuer, and the value of the ETN may drop due to a downgrade in the issuer's credit rating, despite the underlying market benchmark or strategy remaining unchanged.

Short sales may cause an investor to repurchase a security at a higher price, causing a loss. As there is no limit on how much the price of the security can increase, exposure to potential loss is unlimited.

By investing in the subsidiary, the fund is indirectly exposed to risks associated with the subsidiary's investments, including derivatives and commodities. Because the subsidiary is not registered under the Investment Company Act of 1940, the fund will not have the protections offered to investors in US registered investment companies.

The fund is subject to certain other risks. Please see the current prospectus for more information regarding the risks associated with an investment in the fund.
