

DBA PowerShares DB Agriculture Fund 

As of Dec. 31, 2017

Fund Description

The PowerShares DB Agriculture Fund seeks to track changes, whether positive or negative, in the level of the DBIQ Diversified Agriculture Index Excess Return™ (DBIQ Diversified Agriculture Index ER) plus the interest income from the Fund's holdings of primarily US Treasury securities and money market income less the Fund's expenses. The Fund is designed for investors who want a cost-effective and convenient way to invest in commodity futures. The Index is a rules-based index composed of futures contracts on some of the most liquid and widely traded agricultural commodities. The Fund and the Index are rebalanced and reconstituted annually in November.

This Fund is not suitable for all investors due to the speculative nature of an investment based upon the Fund's trading which takes place in very volatile markets. Because an investment in futures contracts is volatile, such frequency in the movement in market prices of the underlying futures contracts could cause large losses. Please see "About Risk" and the Prospectus for additional risk disclosures.

 **A Smart Beta Portfolio**

Fund Inception: Jan. 5, 2007

Index history has certain inherent limitations and does not represent actual trading performance or returns of the Fund. Index history does not represent trades that have actually been executed and therefore may under or over compensate for the impact, if any, of certain market factors, such as illiquidity. No representation is being made that the Fund will or is likely to achieve profits or losses similar to the Index history.

From Jan. 5, 2007 (the Fund's exchange listing date) to Oct. 19, 2009, the Fund sought to track the Deutsche Bank Liquid Commodity Index-Optimum Yield Agriculture Excess Return™. From Oct. 19, 2009, to Dec. 31, 2010, the Fund sought to track the Deutsche Bank Liquid Commodity Index Diversified Agriculture Excess Return™ (Symbol: DBAGIX). Since

Dec. 31, 2010, the Fund seeks to track the DBIQ Diversified Agriculture Index ER (Symbol: DBLCDBAE). The only difference between the Deutsche Bank Liquid Commodity Index Diversified Agriculture Excess Return™ and the DBIQ Diversified Agriculture Index ER is a name change.

The Index results from each discrete time period reflect the closing levels of each applicable index that the Fund tracked during the corresponding time period.

The Fund seeks to track the excess return version of the Index (DBLCDBAE). Because the Fund collateralizes its futures positions primarily with US Treasuries, the results of the total return (DBIQ Diversified Agriculture Index Total Return™) version of the Index (DBLCDBAT) are also displayed. With reference to the total return version Index history, it followed the same Index

history as the excess return version except from Dec. 31, 2010, forward, where the performance shown is of the DBIQ Diversified Agriculture Index TR. Please see powershares.com for Indicative intra-day NAV and last end-of-day NAV.

The S&P GSCI Agriculture Index is a world production-weighted index of certain agricultural commodities in the world economy including futures contracts for wheat (Chicago wheat), red wheat (Kansas wheat), corn, soybeans, cotton, sugar, coffee and cocoa.

Shares are not FDIC insured, may lose value and have no bank guarantee.

Shares are not individually redeemable and owners of the Shares may acquire those Shares from the Fund and tender those Shares for redemption to the Fund in Creation and Redemption Units aggregations only, typically consisting of 200,000 Shares.

How the Fund Invests and Potential Advantages

The Fund invests in liquid futures contracts trading on regulated exchanges and has the following potential advantages:

- **Enhanced commodity index:** The Fund follows the Optimum Yield™ version of the Index, which is designed to provide a more sophisticated strategy for investing in commodities than that provided by conventional commodity indexes.
- **Cost savings:** The Fund does not incur either the cost of storing a physical commodity or the cost of entering into a commodity-linked note with a dealer, a cost that is usually higher than entering into an exchange-traded futures contract.
- **Interest earned:** Owning physical commodities provides an investor with no interest income. The Fund collateralizes its futures contracts primarily with US Treasury bills and earns interest on these securities. This interest accrues to the benefit of investors.
- **Transparency and liquidity:** The Fund invests in actively traded futures contracts at publicly available prices determined by trading on regulated futures exchanges. We believe that this allows the Fund to gain a more direct and cost-effective exposure to commodities at generally better prices than if the Fund either bought commodity-linked notes, which are not publicly priced, or less liquid futures contracts.

About risk

The value of the Shares of the Fund relate directly to the value of the futures contracts and other assets held by the Fund and any fluctuation in the value of these assets could adversely affect an investment in the Fund's Shares.

The Fund is speculative and involves a high degree of risk. An investor may lose all or substantially all of an investment in the Fund.

This fund issues a Schedule K-1.

Commodities and futures generally are volatile and are not suitable for all investors.

Please review the prospectus for breakeven figures for the Fund.

The Intraday NAV is a symbol representing estimated fair value based on the most recent intraday price of underlying assets. Volatility is the annualized standard deviation of index returns. Sharpe Ratio is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe Ratio indicates better risk-adjusted performance. Correlation indicates the degree to which two investments have historically moved in the same direction and magnitude. Alpha is a measure of performance on a risk-adjusted basis. Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times. Beta is a measure of risk representing how a

security is expected to respond to general market movements. Smart Beta represents an alternative and selection index based methodology that seeks to outperform a benchmark or reduce portfolio risk, or both. Smart beta funds may underperform cap-weighted benchmarks and increase portfolio risk.
