Investment Philosophy

We believe long-term outperformance can be achieved by focusing on exceptional companies with durable tailwinds that can drive sustainable growth. We look to build and manage a diversified portfolio of stocks that we want to own for the long term. We believe that entry price is a key component of returns when investing in these companies.

Market overview

Against a backdrop of considerable cyclical macroeconomic challenges emerging market (EM) equities underperformed their global peers during the month of April. The United States and Europe continue to grapple with inflation, rich valuations, and a series of asset bubbles including the recent financial sector crises. Geopolitical tensions between the United States and China further intensified after the US announced further export controls on Chinese companies- predominantly in the technology sector, dampening what many investors hoped would be a strong period of post-Covid growth in China. Despite these challenges, we believe the next twelve months could prove promising for EM equities. EM central banks have been in tightening mode for quite some time and may be close to reversing, which could lead to rekindling of growth.

Monthly performance

Invesco Developing Markets Fund Class A shares (without sales charge) returned 0.58% during the month of April, compared to the MSCI EM Index which returned -1.13%.

Top Sectors Contributing to Relative Performance

- Consumer Discretionary - stock selection
- Financials – stock selection
- Information Technology –underweight allocation/stock selection

Top Countries Contributing to Relative Performance

- China – stock selection/underweight allocation
- India – stock selection/overweight allocation
- Mexico– overweight allocation

Bottom Sectors Detracting from Relative Performance

- Industrials – stock selection
- Energy – underweight allocation
- Utilities – underweight allocation

Bottom Countries Detracting from Relative Performance

- Saudi Arabia – underweight allocation
- United Arab Emirates – underweight allocation
- Poland – underweight allocation

Year-to-Date performance

Invesco Developing Markets Fund Class A shares (without sales charge) returned 11.91% for the year-to-date period, compared to the MSCI EM Index which returned 2.78%. Performance has been driven by strong stock selection across most sectors as well as in China alongside our underweight exposure and contribution from realizing value in our Russian holdings. These positions were previously written down to zero. Positioning in Mexico, where we are overweight vs. the benchmark, also significantly contributed to performance.

Top Sectors Contributing to Relative Performance

- Consumer Discretionary – stock selection
- Materials – stock selection
- Consumer Staples – stock selection

Top Countries Contributing to Relative Performance

- China – stock selection/underweight allocation
- Russia – overweight allocation
- Mexico – overweight allocation/stock selection

Bottom Sectors Detracting from Relative Performance

- Information Technology – stock selection

Bottom Countries Detracting from Relative Performance

- South Korea – underweight allocation/stock selection
- Saudi Arabia – underweight allocation
- Hong Kong – overweight allocation

Top absolute contributors to the year-to-date performance included: **Grupo Mexico**, **Novatek**, and **Taiwan Semiconductor Manufacturing Co. (TSMC)**.

Grupo Mexico is a diversified mining company based in Mexico that boasts a portfolio of unique assets including the fourth largest copper mine in the world. Globally, Grupo Mexico has the largest proven copper reserves, which could allow them to maintain current production levels for decades without significant exploration effort. Grupo Mexico's copper reserves could prove valuable as the world requires increasing quantities of copper for the transition to renewable energy. The mining and rail subsidiaries are significantly cash generative, thanks to quality operations, providing Grupo Mexico with a strong balance sheet and optionality.

Novatek, which we have held for nearly 15 years, is one of the largest independent global gas producers. As per industry practice following Russia's invasion of Ukraine, Invesco priced all Russian equity holdings to zero as of March 2nd, 2022. Market conditions have evolved and allowed us - following strict guidelines and regulations - to realize value in this investment.

Taiwan Semiconductor Manufacturing Co. (TSMC) is one of the world's leading semiconductor foundries and the key enabler of the new computing revolution, with multiple architectures, chip platforms, and design teams competing to push computing and AI innovation. TSMC could be well positioned as they continue migrating to next generation processing nodes.

Top absolute detractors to the year-to-date performance included: **Meituan**, **Samsung Biologics**, and **WuXi Biologics**.

Meituan operates a leading service-based e-commerce platform in China, facilitating food delivery and restaurant reservations, among other services. In general, Chinese equities were negatively impacted by investor concern over escalating political tensions between the United States and China.

Samsung Biologics a South Korean manufacturer of biologics. Samsung Biologics strategy and success has come from its ability to continuously expand production capacity- leading to a global presence. Future growth could be supported by the increase in demand for the outsourced manufacturing of biopharmaceuticals, however short term, the industry could face potential headwinds on the back of a new national strategy unveiled in the United States that calls for stronger domestic production of biologics. We will continue to monitor the competitive landscape and note that Samsung Biologics recently opened a regional office in New Jersey.

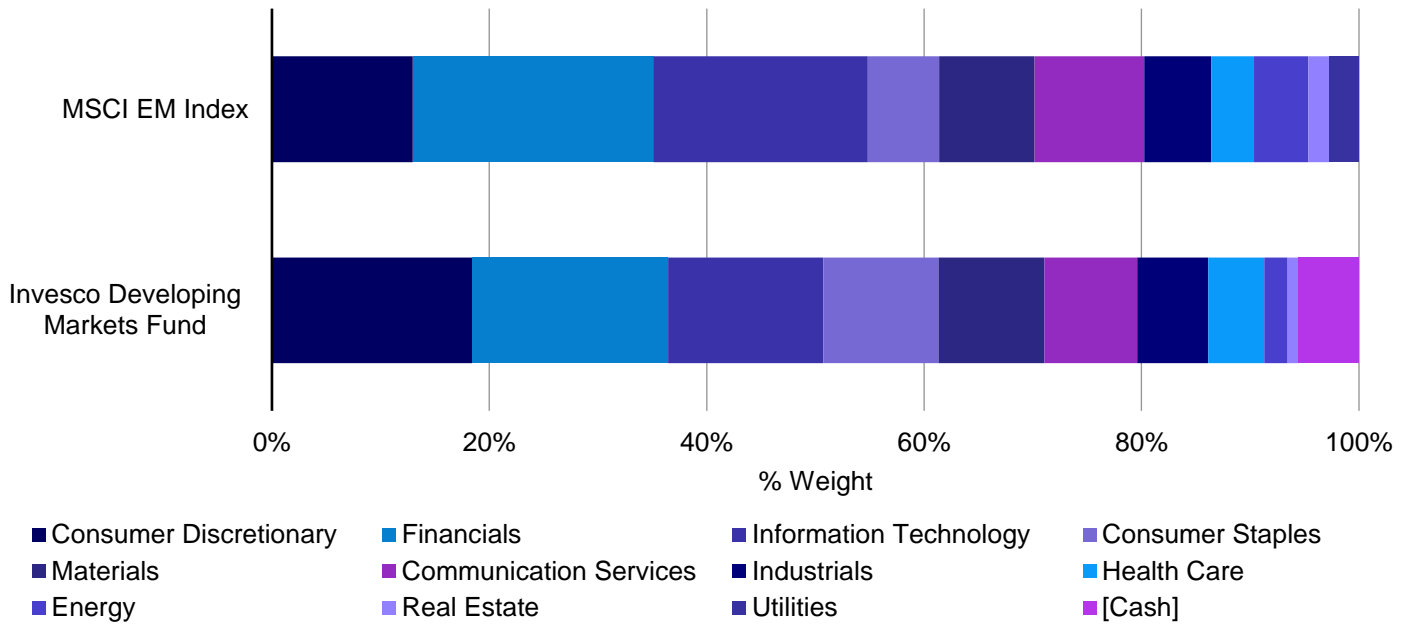

WuXi Biologics leveraged its unique technology and drug production know-how to become the largest contract development and manufacturing organization (CDMO) in China. WuXi collaborates with clients from conception through commercial manufacturing delivering end-to-end solutions and support. The industry could face potential headwinds on the back of a new national strategy unveiled in the United States that calls for stronger domestic production of biologics. WuXi continues to sign large projects and expand capacity, which could provide solid earnings near-term. We will continue to monitor the competitive landscape.

Positioning and Outlook

As of the end of April the portfolio was overweight Consumer Discretionary, Consumer Staples, Health Care, Materials, and Industrials and underweight Information Technology, Financials, Energy, Utilities, Communication Services and Real Estate. Effective February 28, 2023, we updated the current good faith fair value price of zero for Russian equities that are USD denominated and tradeable under current sanctions. We have seen enough market activity such that we will price the securities in accordance with the most recent observed transaction, making appropriate adjustments in light of additional market color.

As long-term investors, company fundamentals are especially crucial to us. Our investment approach has always been rooted in the unwavering focus of unearthing high-quality compounders- innovative companies with structural tailwinds, durable competitive advantages and a host of options that should manifest over time. We believe that this environment, favors those with an idiosyncratic approach and rewards genuine imagination and creativity in unearthing the rare breed of extraordinary companies.

- Class R6 shares: Gross: 0.84%.

Performance quoted is past performance and cannot guarantee comparable future results; current performance may be lower or higher. Visit [invesco.com](https://www.invesco.com) for the most recent month-end performance. Performance figures reflect reinvested distributions and changes in net asset value (NAV). Investment return and principal value will vary so that you may have a gain or a loss when you sell shares. Had fees not been waived and/or expenses reimbursed in the past, returns would have been lower. Performance shown at NAV does not include the applicable front-end sales charge, which would have reduced the performance. Class Y shares have no sales charge; therefore, performance is at NAV. Class I shares were reorganized into Class R6 shares. R6 shares are primarily intended for retirement plans that meet certain standards and for institutional investors.

As the result of a reorganization on May 24, 2019, the returns of the fund for periods on or prior to May 24, 2019 reflect performance of the Openheimer predecessor fund. Share class returns will differ from the predecessor fund due to a change in expenses and sales charges.

1. The MSCI Emerging Markets Index is designed to measure equity market performance of emerging markets. The index is unmanaged, includes the reinvestment of dividends and cannot be purchased directly by investors. Index performance is shown for illustrative purposes only and does not predict or depict the performance of the Fund. **Past performance does not guarantee future results.**

Special Risks:

In general, stock values fluctuate, sometimes widely, in response to activities specific to the company as well as general market, economic and political conditions.

The risks of investing in securities of foreign issuers, including emerging market issuers, can include fluctuations in foreign currencies, political and economic instability, and foreign taxation issues.

Derivatives may be more volatile and less liquid than traditional investments and are subject to market, interest rate, credit, leverage, counterparty and management risks. An investment in a derivative could lose more than the cash amount invested.

The Fund may hold illiquid securities that it may be unable to sell at the preferred time or price and could lose its entire investment in such securities.

The performance of an investment concentrated in issuers of a certain region or country, such as Asia Pacific, is expected to be closely tied to conditions within that region and to be more volatile than more geographically diversified investments.

Stocks of small and mid-sized companies tend to be more vulnerable to adverse developments, may be more volatile, and may be illiquid or restricted as to resale.

The holdings are organized according to the Global Industry Classification Standard, which was developed by and is the exclusive property and a service mark of Morgan Stanley Capital International Inc. and Standard & Poor's.

Growth stocks tend to be more sensitive to changes in their earnings and can be more volatile.

Investing in securities of Chinese companies involves additional risks, including, but not limited to: the economy of China differs, often unfavorably, from the U.S. economy in such respects as structure, general development, government involvement, wealth distribution, rate of inflation, growth rate, allocation of resources and capital reinvestment, among others; the central government has historically exercised substantial control over virtually every sector of the Chinese economy through administrative regulation and/or state ownership; and actions of the Chinese central and local government authorities continue to have a substantial effect on economic conditions in China.

ESG considerations may vary across investments and issuers, and not every ESG factor may be identified or evaluated for investment. The Fund will not be solely based on ESG considerations; therefore, issuers may not be considered ESG-focused companies. ESG factors may affect the Fund's exposure to certain companies or industries and may not work as intended. The Fund may underperform other funds that do not assess ESG factors or that use a different methodology to identify and/or incorporate ESG factors. ESG is not a uniformly defined characteristic and as a result, information used by the Fund to evaluate such factors may not be readily available, complete or accurate, and may vary across providers and issuers. There is no guarantee that ESG considerations will enhance Fund performance.

Following Russia's invasion of Ukraine in February 2022, various countries, including the U.S., NATO and the European Union, issued broad-ranging economic sanctions against Russia and Belarus. As a result, responses to military actions (and further potential sanctions related to continued military activity), the potential for military escalation and other corresponding events, have had, and could continue to have, severe negative effects on regional and global economic and financial markets, including increased volatility, reduced liquidity, and overall uncertainty. Russia may take additional counter measures or retaliatory actions (including cyberattacks), which could exacerbate negative consequences on global financial markets. The duration of ongoing hostilities, corresponding sanctions and related events cannot be predicted. As a result, the value of an investment in the Fund and its performance may be negatively impacted, particularly as it relates to Russia exposure.

The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risks associated with an investment in the Fund.

Diversification does not guarantee a profit or eliminate the risk of loss.
