### Calendar year end gross returns (%)

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	YTD
Return (%)	6.73	-3.15	12.62	10.95	-5.48	16.10	11.20	11.16	-13.38	7.35	5.04

Gross performance has been calculated before the deduction of investment management and client service fees, but after the deduction of all other expenses applicable to the unit class. Net performance has been calculated after the deduction of all fees and expenses applicable to the unit class as well as a hypothetical management fee of 0.45%.

Total return assumes reinvestment of dividends and capital gains for the periods indicated. Past performance is no guarantee of future results. Investment return and principal value will vary and you may have a gain or loss when you sell shares. Returns less than one year are cumulative; all others are annualized.

**Annualized fees and expenses**

Management Fee	N/A
Annual Fund Operating Expenses	0.01%
<b>Total Annual Expense Ratio</b>	<b>0.01%</b>

The investment management fee, which may include client service fees, varies for each Plan based on the fee negotiated with the Plan. This negotiated fee can fluctuate daily based on the various asset level break-points reached at the time the daily fee accrual is calculated for each Plan. Therefore, management fees and optional client service fees are not reflected in fact sheets.

Contact your Plan Sponsor to find out the management fee schedule in effect for your retirement plan.

Fund Operating Expenses are unaudited and subject to change. Operating expenses are borne directly by the fund for operation and administration.

**Word about risk**

Some of the principal risks associated with investing in this Fund include:

Active trading of portfolio securities may result in added expenses and a lower return.

In general, stock values fluctuate, sometimes widely, in response to activities specific to the company as well as general market, economic and political conditions.

Commodity-linked notes may involve substantial risks, including risk of loss of a significant portion of principal and risks resulting from lack of a secondary trading market, temporary price distortions, and counterparty risk.

Commodities may subject an investor to greater volatility than traditional securities such as stocks and bonds and can fluctuate significantly based on weather, political, tax, and other regulatory and market developments.

Should the Fund's asset classes or the selected countries and investments become correlated in a way not anticipated by the Adviser, the risk allocation process may result in magnified risks and loss instead of balancing (reducing) the risk of loss.

Interest rate risk refers to the risk that bond prices generally fall as interest rates rise and vice versa. An issuer may be unable to meet interest and/or principal payments, thereby causing its instruments to decrease in value and lowering the issuer's credit rating.

Derivatives may be more volatile and less liquid than traditional investments and are subject to market, interest rate, credit, leverage, counterparty and management risks. An investment in a derivative could lose more than the cash amount invested. These risks are greater for the Fund than most other funds because its investment strategy is implemented primarily through derivatives rather than direct investments in more traditional securities.

An investment in exchange-traded funds (ETFs) may trade at a discount to net asset value, fail to develop an active trading market, halt trading on the listing exchange, fail to track the referenced index, or hold troubled securities. ETFs may involve duplication of management fees and certain other expenses. Certain of the ETFs the fund invests in are leveraged, which can magnify any losses on those investments.

Exchange-traded notes (ETNs) are subject to credit risk of the issuer, and the value of the ETN may drop due to a downgrade in the issuer's credit rating, despite the underlying market benchmark or strategy remaining unchanged.

The Fund will incur a loss on a short position, which is theoretically unlimited, if the price of the asset sold short increases from the short sale price. In a rising market, short positions will cause the Fund to underperform the overall market and its peers that do not engage in shorting. In a market where the value of both the long and short positions are declining, the Fund may experience substantial losses. Some short positions involve leverage, which may exaggerate losses, more than the cost of the investment, thus increasing the Fund's volatility of returns.

The risks of investing in securities of foreign issuers can include fluctuations in foreign currencies, political and economic instability, and foreign taxation issues.

Underlying investments may appreciate or decrease significantly in value over short periods of time and cause share values to experience significant
