2. Invesco S&P 500 Pure Growth ETF	5.43
3. Invesco Emerging Markets Flexible Bond Fund	2.23

Market overview

- + The third quarter saw modest stock market results, following a strong first half. Though global stocks had a modest gain, emerging market stocks declined. The global economy showed signs of weakness, weighed down by the US-China trade war. Manufacturing data, in particular, showed further deterioration. The ongoing trade war pressured China's economy in the third quarter, with slower industrial production and retail sales. The UK and Germany reported very weak economic data, with growing likelihood of recession in both countries. Japan's economic growth also came under pressure from the US-China trade war.
- + **Fixed income**
Fixed income asset classes posted solid returns in the third quarter. Investors were more risk averse, with US Treasuries outperforming US high-yield. The 10-year US Treasury yield fell below 1.5% due to concerns about global economic slowing and trade conflict. The Federal Reserve cut interest rates twice in the third quarter. The European Central Bank and other central banks eased as well.

Positioning and outlook

- + The fund represents a long-term strategic allocation across asset classes, seeking a total return consistent with a lower level of risk relative to the broad market. The fund targets an allocation of 20%-50% of its total assets in underlying funds that invest primarily in equities (10%-25% in international equities), 50%-70% in underlying funds that invest primarily in fixed income, and approximately 5%-20% of its total assets in alternative asset classes.
- + Global growth is decelerating but not at imminent risk of recession. We do not expect a near-term resolution of the US-China trade war, although we believe the odds of a deal increase as the 2020 US presidential election approaches. Amid ongoing trade conflict, we expect both manufacturing and services sectors to decline, with services holding up relatively better. Given pressure on economic growth, we expect central banks to maintain accommodative monetary policies, which should support global stock market returns.

Performance highlights

- + The fund's Class A shares at net asset value (NAV) posted a positive return but underperformed the fund's custom style-specific benchmark. (Please see the investment results table on page 2 for fund and index performance.)
- + The fund's performance during the quarter is attributable to results of the underlying affiliated funds and strategies, which seek to provide access to a wide array of asset classes and styles including stocks, bonds and alternatives, through actively managed mutual funds and smart beta exchange-traded funds.

Contributors to performance

- + The fund's asset class performance was in line with the broad markets. Allocations to fixed income, US equities and alternatives produced positive results and added to absolute return during the quarter.
- + Relative to the index, allocations to US small- and mid-cap equities were leading contributors. Specifically, **Invesco S&P MidCap Low Volatility ETF** (1.49% of total net assets) benefited from its low volatility factor exposure.
- + Other notable contributors to relative return include **Invesco Core Plus Bond Fund**, **Invesco Global Real Estate Income Fund** and **Invesco Diversified Dividend Fund**. **Invesco Diversified Dividend Fund** primarily benefited from holdings in utilities and consumer staples.

Detractors from performance

- + Fund allocations to international developed and emerging markets produced negative returns and detracted from absolute return.
- + Relative to the index, the fund's allocation to international equities detracted from results. **Invesco RAFI Strategic Developed ex-US ETF** was the largest detractor from absolute and relative return. Additionally, underweight exposure to fixed income and underperformance within US large-cap equities detracted from relative return.
- + Other notable detractors from relative return included **Invesco Emerging Markets Flexible Bond Fund**, **Invesco High Yield Fund** and **Invesco S&P Pure Growth ETF**. **Invesco High Yield Fund** (7.43% of total net assets) faced headwinds during the quarter as lower quality bonds underperformed higher quality bonds.

Fund holdings	% of total net assets
Invesco Core Plus Bond Fund	16.89
Invesco High Yield Fund	7.42

Performance quoted is past performance and cannot guarantee comparable future results; current performance may be lower or higher. Visit invesco.com/performance for the most recent month-end performance.

Performance figures reflect reinvested distributions and changes in net asset value (NAV). Investment return and principal value will vary, and you may have a gain or a loss when you sell shares. No contingent deferred sales charge (CDSC) will be imposed on redemptions of Class C shares following one year from the date shares were purchased. Performance shown at NAV does not include applicable CDSC or front-end sales charges, which would have reduced the performance. Class Y shares have no sales charge; therefore, performance is at NAV. Class S shares have no sales charge; therefore, performance is at NAV. Performance shown prior to the inception date of Class S shares is that of Class A shares and includes the 12b-1 fees applicable to Class A shares. Returns less than one year are cumulative; all others are annualized. Fund performance reflects any applicable fee waivers and/or expense reimbursements. Had the adviser not waived fees and/or reimbursed expenses currently or in the past, returns would have been lower. See current prospectus for more information. Index returns do not reflect any fees, expenses, or sales charges.

The equity sector breakdown doesn't account for holdings of Invesco Balanced-Risk Allocation Fund.

The fund holdings are organized according to the Global Industry Classification Standard, which was developed by and is the exclusive property and service mark of MSCI Inc. and Standard & Poor's.

Duration measures a bond fund's price sensitivity to changes in interest rates, taking into account mortgage prepayments, puts, adjustable coupons and potential call dates.

Beta is a measure of risk representing how a security is expected to respond to general market movements. Smart Beta represents an alternative and selection index based methodology that seeks to outperform a benchmark or reduce portfolio risk, or both. Smart beta funds may underperform cap-weighted benchmarks and increase portfolio risk.

The Custom Invesco Conservative Allocation Index, created by Invesco to serve as a benchmark for the Invesco Conservative Allocation Fund, is composed of the following indexes: Russell 3000® Index, the MSCI EAFE® Index and the Bloomberg Barclays U.S. Aggregate Bond Index. The index composition may change based on the fund's target asset allocation. Therefore, the current index composition doesn't reflect its historical composition and will likely be altered in the future to better reflect fund's objective. The Russell 3000 Index is a trademark/service mark of the Frank Russell Co. Russell® is a trademark of the Frank Russell Co. An investment cannot be made directly in an index.

The S&P 500® Index is an unmanaged index considered representative of the US stock market. An investment cannot be made directly in an index.

The MSCI All Country (AC) World ex-US Index is an index considered representative of developed and emerging market stock markets, excluding the US. The index is computed using the net return, which withholds applicable taxes for non-resident investors. An investment cannot be made directly in an index.

About risk

Commodities may subject an investor to greater volatility than traditional securities such as stocks and bonds and can fluctuate significantly based on weather, political, tax, and other regulatory and market developments.

An issuer may be unable to meet interest and/or principal payments, thereby causing its instruments to decrease in value and lowering the issuer's credit rating.

Derivatives may be more volatile and less liquid than traditional investments and are subject to market, interest rate, credit, leverage, counterparty and management risks. An investment in a derivative could lose more than the cash amount invested.

The risks of investing in securities of foreign issuers can include fluctuations in foreign currencies, political and economic instability, and foreign taxation issues.

The fund is subject to the risks of the underlying funds. Market fluctuations may change the target weightings in the underlying funds and certain factors may cause the fund to withdraw its investments therein at a disadvantageous time.

Interest rate risk refers to the risk that bond prices generally fall as interest rates rise and vice versa.

The fund is subject to certain other risks. Please see the current prospectus for more information regarding the risks associated with an investment in the fund.
