**Morningstar ratings are based on a risk-adjusted return measure that accounts for variation in a fund's monthly performance, placing more emphasis on downward variations and rewarding consistent performance.** Since Inception Lipper Rank data begins the month-end date of the ETF's inception month. **Lipper fund percentile rankings are based on total returns, excluding sales charges and including fees and expenses,** and are versus mutual funds, ETFs and funds of funds in the category tracked by Lipper.

\*Lipper Multi-Cap Value Fund Classification average expense ratio and average annualized capital gains rate (% NAV) are based on open-end, no-load mutual funds and ETFs; excludes funds of funds.

## Key features

- 1 Strong historical performance in an efficient, lower cost option to the average active manager<sup>2</sup>
- 2 Seeks to mitigate potential shortcomings by avoiding market bubbles inherent with market capitalization weighted indices
- 3 Upside participation with potential excess returns through a disciplined annual rebalancing process

## Strong historical performance in an efficient, lower cost option to the average active manager

Over the past 10 years, the Invesco FTSE RAFI US 1000 ETF has outperformed the benchmark Russell 1000 Index and the S&P 500 Index while also having earned a tenth percentile Lipper peer group ranking (19 of 193) since inception, as of September 30, 2019. Please note these results may have included times of underperformance and that there is no guarantee of outperformance in the future, and has done so with an expense ratio of 0.39% and no history of capital gains distribution due to its in-kind creation and redemption process<sup>3</sup>. By comparison, Lipper reports a median expense ratio of 0.90% and an average capital gains rate of 2.94% for multi-cap value funds.\*

### PRF expense ratio and capital gains exposure compared to Lipper peer group

Source: Lipper, as of Sept. 30, 2019. Past performance does not guarantee future results. ETFs generally have lower expenses than actively managed mutual funds due to their different management styles. Most ETFs are passively managed and are structured to track an index, whereas many mutual funds are actively managed and thus have higher management fees. Unlike ETFs, actively managed mutual funds have the ability react to market changes and the potential to outperform a stated benchmark. Since ordinary brokerage commissions apply for each ETF buy and sell transaction, frequent trading activity may increase the cost of ETFs. ETFs can be traded throughout the day, whereas, mutual funds are traded only once a day. While extreme market conditions could result in illiquidity for ETFs, typically they are still more liquid than most traditional mutual funds because they trade on exchanges.

## Seeks to mitigate potential shortcomings by avoiding market bubbles inherent with market capitalization weighted indices

Invesco FTSE RAFI US 1000 ETF is based on Fundamental Index® strategy providing exposure to the 1,000 largest US stocks weighted using four measures of fundamental size – five-year averages of sales, cash flow, dividends and most-recent-year-ending book value. Fundamental Index strategies employ a disciplined rebalancing process that seeks to outperform market-cap-weighted indexes by severing the link between stock price and portfolio weight. The strategy systematically sells overvalued stocks and buys undervalued stocks annually, weighting constituents based on the fundamental measures of company size.

This systematic rebalancing process is the driver of potential excess returns by selling what is popular and trendy while buying what is shunned and neglected.

#### Historical excess returns vs. the Russell 1000 Index

	FTSE RAFI US 1000 Index
<b>Index Launch:</b>	11/28/05
<b>1-year rolling win rate:*</b>	37.66%
<b>3-year rolling win rate:*</b>	51.54%
<b>Annualized excess return:</b>	0.18%

#### **Risk Information**

There are risks involved with investing in ETFs, including possible loss of money. Index-based ETFs are not actively managed. Actively managed ETFs do not necessarily seek to replicate the performance of a specific index. All ETFs are subject to risk similar to stocks, including those regarding short selling and margin maintenance requirements. Ordinary brokerage commissions apply. The funds' return may not match the return of the underlying index. The fund is subject to certain other risks. Please see the current prospectus for more information regarding the risks associated with an investment in the fund.

Investments focused in a particular industry are subject to greater risk, and are more greatly impacted by market volatility, than more diversified investments.

#### **Morningstar rating**

Open-end mutual funds and exchange-traded funds are considered a single population for comparison purposes. Ratings are calculated for funds with at least a three-year history. The overall rating is derived from a weighted average of three-, five- and 10-year rating metrics, as applicable, excluding sales charges and including fees and expenses. Had fees not been waived and/or expenses reimbursed currently or in the past, the Morningstar rating would have been lower.
