

# Invesco Top QQQ ETF

## QBIG

### Fund description

The Fund is an actively managed exchange-traded fund ("ETF") that seeks to achieve its investment objective through exposure to the top companies in the Nasdaq-100 Index (the "Nasdaq-100"), as represented in the Nasdaq-100 Mega Index (the "Index"). The Nasdaq-100 consists of securities of 100 of the largest domestic and international non-financial companies listed on The Nasdaq Stock Market LLC based on market capitalization. The Index is a subset of the Nasdaq-100, comprising approximately the top 45% by weight of Nasdaq-100 companies, but not exceeding 47%. The Fund seeks to track the performance of those companies.

### ETF information

Fund name	Invesco Top QQQ ETF
Fund ticker	QBIG
CUSIP	46090A671

Performance data quoted represents past performance. Past performance is not a guarantee of future results; current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and Shares, when redeemed, may be worth more or less than their original cost. See [invesco.com](https://www.invesco.com) to find the most recent month-end performance numbers. Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times. Fund performance reflects fee waivers, absent which, performance data quoted would have been lower.

Index returns do not represent Fund returns. An investor cannot invest directly in an index.

Neither the underlying Index nor the benchmark indexes charge management fees or brokerage expenses, and no such fees or expenses were deducted from the performance shown; nor do any of the indexes lend securities, and no revenues from securities lending were added to the performance shown. In addition, the results actual investors might have achieved would have differed from those shown because of differences in the timing, amounts of their investments, and fees and expenses associated with an investment in the Fund.

Nasdaq-100® Index includes 100 of the largest domestic and international nonfinancial securities listed on The Nasdaq Stock Market, based on market capitalization

<sup>1</sup>The NASDAQ Composite Index measures all NASDAQ domestic and international-based common stocks listed on The Nasdaq Stock Market.

#### Investment risks

There are risks involved with investing in ETFs, including possible loss of money. Actively managed ETFs do not necessarily seek to replicate the performance of a specified index. Actively managed ETFs are subject to risks similar to stocks, including those related to short selling and margin maintenance. Ordinary brokerage commissions apply. The Fund's return may not match the return of the Index. The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risk associated with an investment in the Fund.

Securities held by the Fund are subject to market fluctuations. You should anticipate that the value of the Shares will decline, more or less, in correlation with any decline in value of the securities in the Fund's portfolio. Additionally, natural or environmental disasters, widespread disease or other public health issues, war, military conflicts, acts of terrorism, economic crises or other events could result in increased premiums or discounts to the Fund's net asset value ("NAV").

The Fund is subject to management risk because a portion of its assets are actively managed. In managing certain of the Fund's investment sleeves and other portfolio holdings, the Adviser applies investment techniques and risk analyses in making investment and asset allocation decisions for the Fund, but there can be no guarantee that these actions will produce the desired results.

While a portion of the Fund's portfolio is actively managed, another portion of the Fund's portfolio is designed to track the performance of the Index. In managing this portion of the Fund's portfolio, the portfolio managers will not generally buy or sell a security unless that security is added or removed, respectively, from the Index, regardless of the performance of that security. If a specific security is removed from the Index, the Fund may be forced to sell such security at an inopportune time or for a price lower than the security's current market value. The Index may not contain the appropriate mix of securities for any particular economic cycle.

In general, equity values fluctuate, sometimes widely, in response to activities specific to the company as well as general market, economic and political conditions.

Swaps involve greater risks than direct investments. Swaps are subject to leveraging, liquidity and counterparty risks, and therefore may be difficult to value. Adverse changes in the value or level of the swap can result in gains or losses that are substantially greater than invested, with the potential for unlimited loss.

Investments focused in a particular industry are subject to greater risk, and are more greatly impacted by market volatility, than more diversified investments.

Investments focused in a particular sector, such as technology, are subject to greater risk, and are more greatly impacted by market volatility, than more diversified investments.

Derivatives may be more volatile and less liquid than traditional investments and are subject to market, interest rate, credit, leverage, counterparty and management risks. An investment in a derivative could lose more than the cash amount invested.

Risks of futures contracts include an imperfect correlation between the value of the futures contract and the underlying commodity; possible lack of a liquid secondary market; inability to close a futures contract when desired; losses due to unanticipated market movements; obligation for the Fund to make daily cash payments to maintain its required margin; failure to close a position may result in the Fund receiving an illiquid commodity; and unfavorable execution prices.

Counterparty risk is the risk that the other party to the contract will not fulfill its contractual obligations, which may cause losses or additional costs.

Leverage created from borrowing or certain types of transactions or instruments may impair the fund's liquidity, cause it to liquidate positions at an unfavorable time or lose more than it invested, increase volatility or otherwise not achieve its intended objective.

To the extent the Fund holds cash or cash equivalents rather than securities or other instruments in which it primarily invests, the Fund risks losing opportunities to participate in market appreciation and may experience potentially lower returns.

Collateral may include obligations issued or guaranteed by the U.S. government, its agencies and instrumentalities, including bills, notes and bonds issued by the U.S. Treasury, money market funds and corporate debt securities, such as commercial paper.

Although the Fund may hold securities that carry U.S. government guarantees, these guarantees do not extend to shares of the Fund. Money market funds are subject to management fees and other expenses. Therefore, investments in money market funds will cause the Fund to bear indirectly a proportional share of the fees and costs of the money market funds in which it invests. At the same time, the Fund will continue to pay its own management fees and expenses with respect to all of its assets, including any portion invested in the shares of the money market fund. It is possible to lose money by investing in money market funds.

Corporate debt securities such as commercial paper generally are short-term unsecured promissory notes issued by businesses. Corporate debt may be rated investment-grade or below investment-grade and may carry variable, or floating, rates of interest. Corporate debt securities carry both credit risk and interest rate risk. Credit risk is the risk that the Fund could lose money if the issuer of a corporate debt security is unable to pay interest or repay principal when it is due. Some corporate debt securities that are rated below investment-grade generally are considered speculative because they present a greater risk of loss, including default, than high quality debt securities.

Obligations issued by US Government agencies and instrumentalities may receive varying levels of support from the government, which could affect the fund's ability to recover should they default.

Interest rate risk refers to the risk that bond prices generally fall as interest rates rise and vice versa.

The Fund typically will hold a small number of positions. To the extent that a significant portion of the Fund's total assets is invested in a limited number of holdings, the appreciation or depreciation of any one position may have a greater impact on the Fund's NAV than it would if the Fund held a greater number of constituents.

The Fund is non-diversified and may experience greater volatility than a more diversified investment.

American Depository Receipts (ADRs) may be subject to certain of the risks associated with direct investments in the securities of foreign companies. ADRs may not track the price of the underlying securities on which they are based, and their value may change materially at times when U.S. markets are not open for trading.

The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

The Fund currently intends to effect creations and redemptions principally for cash, rather than principally in-kind because of the nature of the Fund's investments. As such, investments in the Fund may be less tax efficient than investments in ETFs that create and redeem in-kind.

The Fund is subject to numerous market trading risks, including the potential lack of an active market, losses from trading in secondary markets, and disruption in the creation/redemption process. During stressed market conditions, Shares may become less liquid as result of deteriorating liquidity which could lead to differences in the market price and the underlying value of those Shares.

To qualify as a regulated investment company ("RIC"), the Fund must meet a qualifying income test each taxable year. Failure to comply with the test would have significant negative tax consequences for shareholders. The Fund believes that income from futures should be treated as qualifying income for purposes of this test, thus qualifying the Fund as a RIC. If the IRS were to determine that the Fund's income is derived from the futures did not constitute qualifying income, the Fund likely would be required to reduce its exposure to such investments in order to maintain its RIC status.

**Glossary**

**30 Day SEC Unsubsidized Yield** reflects the 30-day yield if the investment adviser were not waiving all or part of its fee or reimbursing the fund for part of its expenses during the period as defined by the guidelines, where applicable, referenced in the current prospectus. Total return would have also been lower in the absence of these temporary reimbursements or waivers.

**30 Day SEC Yield** is based on a 30-day period and is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period.

**Intraday NAV** is a symbol representing estimated fair value based on the most recent intraday price of underlying assets.

**Weighted Harmonic Average Stock Price-to-Book-Value Ratio (P/B Ratio)** is the ratio of a stock's market price to a company's net asset value.

**Weighted Harmonic Average Stock Price-to-Earnings Ratio (P/E Ratio)** is the share price divided by earnings per share. It is measured on a 12-month trailing basis.

**Weighted Average Return on Equity** is net income divided by net worth.

**Weighted Market Capitalization** is the sum of each underlying securities market value.
