Invesco Electric Vehicle Metals Commodity Strategy No K-1 ETF (EVMT) Distribution December 18, 2023

EVMT, the Invesco Electric Vehicle Metals Commodity Strategy No K-1 ETF, announced an income distribution of $0.92807 per share with an Ex-Date of December 18th, a Record Date of December 19th and a Payable Date of December 22nd.

Invesco currently has one of the industry's leading broad-based commodity platforms. The Invesco Electric Vehicle Metals Commodity Strategy No K-1 ETF (EVMT) is a 1940 Act commodity fund.

- EVMT invests in a basket of industrial metals widely used in the production of electric vehicles, while being structured in a manner that avoids generating a K-1 and K-3 for its investors.
- The Fund's strategy invests in derivatives and other financially-linked instruments through its Subsidiary. The Fund is required to pay out income, which is generated by a combination of EVMT's investment methodology and collateral holdings. Investors should consult with their tax advisor and review all potential tax considerations when determining whether to invest.
- Certain competing commodity ETFs and mutual funds with structures similar to EVMT have the same tax treatment. Differences in size or timing of distributions across similar products may be caused by a variety of factors including performance, assets, flows, collateral makeup, and fiscal year period.

Invesco Electric Vehicle Metals Commodity Strategy No K-1 ETF (EVMT) had the following distribution in December 2023:

	Record Date	December 19, 2023	
	Payable Date	December 22, 2023	

About Risk

Investments linked to prices of commodities may be considered speculative. Significant exposure to commodities may subject the Fund to greater volatility than traditional investments. The value of such instruments may be volatile and fluctuate widely based on a variety of factors. Prices fluctuations may be quick and significant and may not correlate to price movements in other asset classes.

Investments focused in a particular sector, such as metals, are subject to greater risk, and are more greatly impacted by market volatility, than more diversified investments. Investments in metals may be highly volatile and can change quickly and unpredictably due to several factors, including the supply and demand of each metal, environmental or labor costs, political, legal, financial, accounting and tax matters and other events the Fund cannot control. As a result, the price of a metal could decline, adversely affecting the Fund's performance.

Thematic investing involves the risk that the electric vehicle theme is out of favor, or that the metals chosen to capitalize on that theme underperform the market. The Fund invests in instruments linked to the metals used in the production of electric vehicles, and performance may suffer if the metals do not benefit from the development of the electric vehicle theme. While the Fund will not invest directly in electric vehicle and other related companies, the performance of its commodity-based strategy may be indirectly impacted by the performance of such companies.

The Fund's investments in futures contracts will cause it to be deemed to be a commodity pool, subjecting it to regulation under the Commodity Exchange Act and Commodity Futures Trading Commission (CFTC) rules. The Adviser, a registered Commodity Pool Operator (CPO) and commodity trader advisor (CTA), and the Fund will be operated in accordance with CFTC rules. Registration as a CPO or CTA subjects the Adviser to additional laws, regulations, and enforcement policies; all of which could increase compliance costs, affect the operations and financial performance. Registration as a commodity pool may have negative effects on the ability of the Fund to engage in its planned investment program.

A decision as to whether, when and how to use options involves the exercise of skill and judgment and even a well-conceived option transaction may be unsuccessful because of market behavior or unexpected events. The prices of options can be highly volatile , and the use of options can lower total returns.
Exchange-traded notes (ETNs) are subject to credit risk of the issuer, and the value of the ETN may drop due to a downgrade in the issuer's credit rating, despite the underlying market benchmark or strategy remaining unchanged.

Counterparty risk is the risk that the other party to the contract will not fulfill its contractual obligations, which may cause losses or additional costs.

Because the Subsidiary is not registered under the Investment Company Act of 1940, as amended (1940 Act), the Fund, as the sole investor in the Subsidiary, will not have the protections offered to investors in U.S. registered investment companies.

The Fund is non-diversified and may experience greater volatility than a more diversified investment.

There are risks involved with investing in ETFs, including possible loss of money. Actively managed ETFs do not necessarily seek to replicate the performance of a specified index. Actively managed ETFs are subject to risks similar to stocks, including those related to short selling and margin maintenance. Ordinary brokerage commissions apply. The Fund's return may not match the return of the Index. The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risk associated with an investment in the Fund. The Fund is subject to management risk because it is an actively managed portfolio. The investment techniques and risk analysis used by the portfolio managers may not produce the desired results.

Risks of futures contracts include: an imperfect correlation between the value of the futures contract and the underlying commodity; possible lack of a liquid secondary market; inability to close a futures contract when desired; losses due to unanticipated market movements; obligation for the Fund to make daily cash payments to maintain its required margin; failure to close a position may result in the Fund receiving an illiquid commodity; and unfavorable execution prices.

In pursuing its investment strategy, particularly when "rolling" futures contracts, the Fund may engage in frequent trading of its portfolio securities, resulting in a high portfolio turnover rate.

Commodity-linked notes may involve substantial risks, including risk of loss of a significant portion of principal and risks resulting from lack of a secondary trading market, temporary price distortions, and counterparty risk.

Swaps are subject to leveraging, liquidity and counterparty risks, and therefore may be difficult to value. Adverse changes in the value or level of the swap can result in gains or losses that are substantially greater than invested, with the potential for unlimited loss.

Derivatives may be more volatile and less liquid than traditional investments and are subject to market, interest rate, credit, leverage, counterparty and management risks. An investment in a derivative could lose more than the cash amount invested.

To qualify as a regulated investment company (“RIC”), the Fund must meet a qualifying income test each taxable year. Failure to comply with the test would have significant negative tax consequences for shareholders. The Fund believes that income from futures should be treated as qualifying income for purposes of this test, thus qualifying the Fund as a RIC. If the IRS were to determine that the Fund’s income is derived from the futures did not constitute qualifying income, the Fund likely would be required to reduce its exposure to such investments in order to maintain its RIC status.

Leverage created from borrowing or certain types of transactions or instruments may impair liquidity, cause positions to be liquidated at an unfavorable time, lose more than the amount invested, or increase volatility.

The Fund may hold illiquid securities that it may be unable to sell at the preferred time or price and could lose its entire investment in such securities.

The Fund currently intends to effect creations and redemptions principally for cash, rather than principally in-kind because of the nature of the Fund's investments. As such, investments in the Fund may be less tax efficient than investments in ETFs that create and redeem in-kind.

Important Information

Note: Not all products available through all firms or in all jurisdictions.

Shares are not individually redeemable and owners of the Shares may acquire those Shares from the Fund and tender those Shares for redemption to the Fund in Creation Unit aggregations only, typically consisting of 10,000, 20,000, 25,000, 50,000, 80,000, 100,000 or 150,000 Shares.

This does not constitute a recommendation of any investment strategy or product for a particular investor. Investors should consult a financial professional before making any investment decisions.

Invesco does not offer tax advice. Please consult your tax professional for information regarding your own personal tax situation.

Before investing, investors should carefully read the prospectus and consider the investment objectives, risks, charges and expenses. For this and more complete information about the fund, investors should ask their financial professionals for a prospectus or download one at invesco.com.
