Data as of September 30, 2020. All data is provided by Invesco. Data is subject to change on a daily basis.

- 1 The funds have designated years of maturity ranging from 2020 to 2030 and will terminate on or about December 15 for the investment-grade, high yield and municipal bond series and on or about December 31 for the emerging market debt series of their respective maturity year. In connection with such termination, each fund will make a cash distribution to then current shareholders of its net assets after making appropriate provisions for any liabilities of the fund. The funds do not seek to return any predetermined amount at maturity. During the final year of maturity, bonds held by the funds' will mature and proceeds will be reinvested cash and cash equivalents, including without limitation US Treasury bills and investment-grade commercial paper for the High Yield Corporate and Emerging Market Debt ETFs. For the Municipal ETFs, their proceeds will be reinvested in cash and cash equivalents, including without limitation Variable Rate Demand Obligations (VRDOs) and interest-bearing cash; however, in some circumstances, such as limited supply, additional instruments may be used. See the prospectus for more information. The funds will terminate without requiring additional approval by its board or shareholders. The board may change the termination date to an earlier or later date without shareholder approval if determined the change to be in the best interest of the fund. See the prospectus for more information about the funds' termination.
- 2 Effective duration measures the sensitivity of the price (the value of principal) of a fixed income investment to a change in interest rates. The larger the duration number, the greater the interest rate risk for bond prices.
- 3 Average maturity is the length of time until the principal amount of a bond must be repaid.
- 4 Through August 31, 2021, Invesco Capital Management LLC (the "Adviser") has contractually agreed to waive a portion of the fund's management fee in an amount equal to 100% of the net advisory fees an affiliate of the Adviser receives that are attributable to certain of the fund's investments in money market funds managed by that affiliate. This waiver will have the effect of reducing the Acquired Fund Fees and Expenses that are indirectly borne by the fund. The Adviser cannot discontinue this waiver prior to its expiration.

BulletShares ETFs

There are risks involved with investing in ETFs, including possible loss of money. Shares are not actively managed and are subject to risks similar to those of stocks, including those regarding short-selling and margin maintenance requirements. Ordinary brokerage commissions apply. The funds' return may not match the return of the underlying index. The funds are subject to certain other risks. Please see the current prospectus for more information regarding the risk associated with an investment in the funds.

Investments focused in a particular sector are subject to greater risk, and are more greatly impacted by market volatility, than more diversified investments.

The funds are non-diversified and may experience greater volatility than a more diversified investment.

Interest rate risk refers to the risk that bond prices generally fall as interest rates rise and vice versa.

During the final year of the funds' operations, as the bonds mature and the portfolio transitions to cash and cash equivalents, the funds' yield will generally tend to move toward the yield of cash and cash equivalents and thus may be lower than the yields of the bonds previously held by the funds and/or bonds in the market.

If interest rates fall, it is possible that issuers of callable securities will call or prepay their securities before maturity, causing the fund to reinvest proceeds in securities bearing lower interest rates and reducing the fund's income and distributions.

An issuer may be unable or unwilling to meet interest and/or principal payments, thereby causing its instruments to decrease in value and lowering the issuer's credit rating.

Income generated from the funds is based primarily on prevailing interest rates, which can vary widely over the short- and long-term. If interest rates drop, the funds' income may drop as well. During periods of rising interest rates, an issuer may exercise its right to pay principal on an obligation later than expected, resulting in a decrease in the value of the obligation and in a decline in the funds' income.

An issuer's ability to prepay principal prior to maturity can limit the funds' potential gains. Prepayments may require the funds to replace the loan or debt security with a lower yielding security, adversely affecting the funds' yield.

The funds currently intend to effect creations and redemptions principally for cash, rather than principally in-kind because of the nature of the funds' investments. As such, investments in the funds may be less tax-efficient than investments in ETFs that create and redeem in-kind.

Unlike a direct investment in bonds, the funds' income distributions will vary over time and the breakdown of returns between fund distributions and liquidation proceeds are not predictable at the time of investment. For example, at times the funds may make distributions at a greater (or lesser) rate than the coupon payments received, which will result in the funds returning a lesser (or greater) amount on liquidation than would otherwise be the case. The rate of fund distribution payments may affect the tax characterization of returns, and the amount received as liquidation proceeds upon fund termination may result in a gain or loss for tax purposes.

During periods of reduced market liquidity or in the absence of readily available market quotations for the holdings of the fund, the ability of the fund to value its holdings becomes more difficult and the judgment of the sub-adviser may play a greater role in the valuation of the fund's holdings due to reduced availability of reliable objective pricing data.

The funds' use of a representative sampling approach will result in its holding a smaller number of securities than are in the underlying index, and may be subject to greater volatility.

BulletShares High Yield ETFs

The values of junk bonds fluctuate more than those of high-quality bonds and can decline significantly over short time periods.

The risks of investing in securities of foreign issuers, including emerging market issuers, can include fluctuations in foreign currencies, political and economic instability, and foreign taxation issues.

BulletShares Emerging Markets ETFs

The risks of investing in securities of foreign issuers, including emerging market issuers, can include fluctuations in foreign currencies, political and economic instability, and foreign taxation issues.

Non-investment-grade securities may be subject to greater price volatility due to specific corporate developments, interest rate sensitivity, negative perceptions of the market, adverse economic and competitive industry conditions and decreased market liquidity.

The funds may invest in privately issued securities, including 144A securities which are restricted (i.e., not publicly traded). The liquidity market for Rule 144A securities may vary, as a result, delay or difficulty in selling such securities may result in a loss to the fund.

The funds may hold illiquid securities that it may be unable to sell at the preferred time or price and could lose its entire investment in such securities.

Government obligors in emerging market countries are among the world's largest debtors to commercial banks, other governments, international financial organizations and other financial instruments. Issuers of sovereign debt or the governmental authorities that control repayment may be unable or unwilling to repay principal or interest when due, and the fund may have limited recourse in the event of default. Without debt holder approval, some governmental debtors may be able to reschedule or restructure their debt payments or declare moratoria on payments.

BulletShares Municipal ETFs

Municipal securities are subject to the risk that legislative or economic conditions could affect an issuer's ability to make payments of principal and/ or interest.

Shares are not individually redeemable and owners of the shares may acquire those shares from the fund and tender those shares for redemption to the fund in creation unit aggregations only, typically consisting of 100,000 or 150,000 shares.

This does not constitute a recommendation of any investment strategy or product for a particular investor. Investors should consult a financial professional before making any investment decisions.
