Returns less than one year are cumulative. Performance data quoted represents past performance. Past performance is not a guarantee of future results; current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and Shares, when redeemed, may be worth more or less than their original cost. See invesco.com to find the most recent month-end performance numbers. Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times. Fund performance reflects fee waivers, absent which, performance data quoted would have been lower.

Fund inception: July 17, 2024

Not a Deposit Not FDIC Insured Not Guaranteed by the Bank May Lose Value Not Insured by any Federal Government Agency.

Shares are not individually redeemable and owners of the Shares may acquire those Shares from the Fund and tender those Shares for redemption to the Fund in Creation Unit aggregations only, typically consisting of 50,000 Shares.

Investment risks

This piece must be preceded or accompanied by the current prospectus .

There are risks involved with investing in ETFs, including possible loss of money. Actively managed ETFs do not necessarily seek to replicate the performance of a specified index. Actively managed ETFs are subject to risks similar to stocks, including those related to short selling and margin maintenance. Ordinary brokerage commissions apply. The Fund's return may not match the return of the Index. The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risk associated with an investment in the Fund.

Securities held by the Fund are subject to market fluctuations. You should anticipate that the value of the Shares will decline, more or less, in correlation with any decline in value of the securities in the Fund's portfolio. Additionally, natural or environmental disasters, widespread disease or other public health issues, war, military conflicts, acts of terrorism, economic crises or other events could result in increased premiums or discounts to the Fund's net asset value ("NAV")

The investment techniques and risk analysis used by the portfolio managers may not produce the desired results.

While the Fund is actively managed, a substantial portion of the Fund's portfolio is designed to track the performance of the Index. In managing this portion of the Fund's portfolio, the portfolio managers will not generally buy or sell a security unless that security is added or removed, respectively, from the Index, regardless of the performance of that security. If a specific security is removed from the Index, the Fund may be forced to sell such security at an inopportune time or for a price lower than the security's current market value

In general, equity values fluctuate, sometimes widely, in response to activities specific to the company as well as general market, economic and political conditions.

Investments in ELNs are susceptible to the risks of their underlying instruments, which could include management risk, market risk and, as applicable, foreign securities and currency risks. ELNs are also subject to certain debt securities risks, such as interest rate and credit risks. Should the prices of the underlying instruments move in an unexpected manner, the Fund may not achieve the anticipated benefits of an investment in an ELN, and may realize losses, which could be significant and could include the Fund's entire principal investment. An ELN investment is also subject to counterparty risk, which is the risk that the issuer of the ELN will default or become bankrupt and the Fund may not be repaid the principal amount of, or income from, its investment. ELNs may also be less liquid than more traditional investments and the Fund may be unable to sell ELNs at a desirable time or price. In addition, the price of ELNs may not correlate with the underlying securities or a fixed income investment

Investments focused in a particular industry are subject to greater risk, and are more greatly impacted by market volatility, than more diversified investments.

Derivatives may be more volatile and less liquid than traditional investments and are subject to market, interest rate, credit, leverage, counterparty and management risks. An investment in a derivative could lose more than the cash amount invested.

Risks of futures contracts include: an imperfect correlation between the value of the futures contract and the underlying commodity; possible lack of a liquid secondary market; inability to close a futures contract when desired; losses due to unanticipated market movements; obligation for the Fund to make daily cash payments to maintain its required margin; failure to close a position may result in the Fund receiving an illiquid commodity; and unfavorable execution prices.

A decision as to whether, when and how to use options involves the exercise of skill and judgment and even a well conceived option transaction may be unsuccessful because of market behavior or unexpected events. The prices of options can be highly volatile and the use of options can lower total returns.

Short sales may cause an investor to repurchase a security at a higher price, causing a loss. As there is no limit on how much the price of the security can increase, exposure to potential loss is unlimited.

Because the Fund may invest in other investment companies, it's subject to the risks associated with the investment company and its investment performance may depend on the underlying investment company's performance. The Fund will indirectly pay a proportional share of the investment company's fees and expenses, while continuing to pay its own management fee to the Adviser, resulting in shareholders absorbing duplicate levels of fees.

The Fund is non-diversified and may experience greater volatility than a more diversified investment.

The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole.

The Fund currently intends to effect creations and redemptions principally for cash, rather than principally in-kind because of the nature of the Fund's investments. As such, investments in the Fund may be less tax efficient than investments in ETFs that create and redeem in-kind.

The Fund is subject to numerous market trading risks, including the potential lack of an active market, losses from trading in secondary markets, and disruption in the creation/redemption process. During stressed market conditions, Shares may become less liquid as result of deteriorating liquidity which could lead to differences in the market price and the underlying value of those Shares.

Glossary

30 Day SEC Unsubsidized Yield reflects the 30-day yield if the investment adviser were not waiving all or part of its fee or reimbursing the fund for part of its expenses during the period as defined by the guidelines, where applicable, referenced in the

current prospectus. Total return would have also been lower in the absence of these temporary reimbursements or waivers.

30 Day SEC Yield is based on a 30-day period and is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period.

Weighted Harmonic Average Stock Price-to-Book-Value Ratio (P/B Ratio) is the ratio of a stock's market price to a company's net asset value.

Weighted Harmonic Average Stock Price-to-Earnings Ratio (P/E Ratio) is the share price divided by earnings per share. It is measured on a 12-month trailing basis.

Weighted Average Return on Equity is net income divided by net worth.

Weighted Market Capitalization is the sum of each underlying securities market value.

Intraday NAV is a symbol representing estimated fair value based on the most recent intraday price of underlying assets.
