

# Invesco Stable Value Portfolio

## Quarterly Performance Commentary

CUSIPS: A:76222X471 C:76222X455 I:76222X422

### Investment objective

The portfolio invests 100% of its assets in the Invesco Stable Value separate account. The Invesco Stable Value separate account invests in investment contracts (also referred to as "wrap contracts") and seeks to produce a stable return while avoiding negative returns. In most market environments, it should provide investors with a higher return than a money market fund while striving to maintain liquidity for Account Owner initiated transactions and safety of principal.

### Portfolio management

Jennifer L. Gilmore, Jeff Deetsch

Management is that of the underlying separate account.

### Portfolio information

Tickers	A:INDWX	C:INEBX I:INEXD
Total net assets	\$178,340,960	
Total number of securities	1136	

Securities are that of the underlying separate account.

### Holdings statistics (%)

Effective duration	3.26
Crediting rate (%)	3.09

Data shown is that of the underlying separate account.

### Sector breakdown (%)

Corporate	27.19
MBS	23.18
ABS	21.71
US Treasury & Cash	15.72
CMBS	7.51
STIF	4.08
Agency	0.54
Municipal	0.04
Non - US Govt/Agency	0.03

Data shown is that of the underlying separate account. May not equal 100% due to rounding.

Portfolio commentary provided is based on the underlying separate account.

### Market overview

- During the quarter, short-term interest rates fell as the US Federal Reserve (Fed) continued its easing cycle; the 0.25% cut in December lowered the federal funds rate range to 3.50%-3.75%. This was the third cut in 2025, aimed at supporting a cooling labor market. Meanwhile, long-term yields rose. Corporate credit underperformed Treasuries due to widening of yield spreads between Treasury and non-Treasury sectors, along with volatility early in the quarter. Despite the mixed rate environment, the Bloomberg US Aggregate Bond Index managed a return of 1.10%.
- The two-year Treasury yield declined from 3.60% to 3.47%; the five-year yield saw a decrease from 3.74% to 3.73%. In contrast, longer term yields rose, with the 10-year yield increasing modestly from 4.16% to 4.18% and the 30-year yield rising more noticeably from 4.73% to 4.84%. These movements reflect, in our view, varying investor expectations across the yield curve.
- Investment grade credit underperformed duration-matched Treasuries during the quarter as overall widening of yield spreads and interest rate volatility early in the quarter outweighed December's tightening of yield spreads and positive performance. Corporate issuance for the quarter was \$321 billion, down from \$431 billion last quarter. High-yield issuance was \$65 billion for the quarter, down from \$121 billion last quarter.
- Structured credit securities, including mortgage-backed securities (MBS), commercial mortgage-backed securities (CMBS) and asset-backed securities (ABS), delivered positive performance relative to comparable duration Treasuries. Results were supported by cooling inflation data and signs of a softening labor market, which reinforced the Fed's latest rate cuts.

### Performance highlights

- For the fourth quarter, the portfolio's Class A units at net asset value (NAV) had a positive absolute book value return but underperformed its benchmark. The portfolio's short, intermediate and core duration fixed income assets yielded more than money markets as securities with longer maturities generally yielded more than those with shorter maturities.
- Portfolio yield declined during the quarter as interest rates were lower for shorter maturities, offsetting any increase in the longer term maturities. The crediting rate will, by design, follow the yield on the underlying portfolio with a lag. (December crediting rates were based on end of October portfolio data.)
- Invesco continues to manage the stable value portfolio using a diversified allocation of wrap issuers, investment strategies and underlying fund managers.

### Positioning and outlook

- At quarter end, the portfolio's primary overweight relative to the index was in the ABS sector. The portfolio was also overweight in the corporate and Agency mortgage sectors, while remaining underweight in Treasuries and CMBS.
- The portfolio's duration was longer than its benchmark, which could benefit the portfolio if rates decline. We believe the portfolio's overweight in high quality non-Treasury assets, such as securitized sectors and corporate bonds, offers a potential yield advantage over the benchmark in the long term.

Investment results						
Average annual total returns (%) as of Dec. 31, 2025						
Period	Class A units		Class C units		Class I units	Style-Specific Index
	Inception: 07/08/16 Max Load 3.00%	NAV	Inception: 07/08/16 Max CDSC 1.00%	NAV	Inception: 07/08/16 NAV	Bloomberg 3-Month Treasury Bellwether Index
Inception	1.19	1.63	1.21	1.21	1.89	-
5 Years	0.93	1.77	1.03	1.03	2.03	3.23

1 Year	-1.93	2.19	0.50	1.50	2.49	4.23
Quarter	-3.48	0.52	-0.63	0.37	0.59	0.99

The performance quoted is past performance and is not a guarantee of future results. Investment returns and principal value of an investment will fluctuate so that an account owner's units, when redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than the performance data shown. For up-to-date month-end performance information please call 877 615 4116, or visit [collegebound529.com](http://collegebound529.com). Performance figures reflect reinvested distributions of the underlying security and changes in net asset value (NAV). No contingent deferred sales charge (CDSC) will be imposed on redemptions of Class C units following one year from the date units were purchased. Performance shown at NAV does not include applicable CDSC or front-end sales charges, which would have reduced the performance. Class I units have no sales charge; therefore, performance is at NAV. Returns less than one year are cumulative; all others are annualized. Index returns do not reflect any fees, expenses, or sales charges.

STIF	4.08

Data shown is that of the underlying separate account. Ratings source: Standard & Poor's, Moody's or Fitch, as applicable. A credit rating is an assessment provided by a nationally recognized statistical rating organization (NRSRO) of the creditworthiness of an issuer with respect to debt obligations, including specific securities, money market instruments or other debts. Ratings are measured on a scale that generally ranges from AAA (highest) to D (lowest); ratings are subject to change without notice. If securities are rated differently by the rating agencies, the higher rating is applied. Not Rated indicates the debtor was not rated and should not be interpreted as indicating low quality. A negative in Cash indicates fund activity that has accrued or is pending settlement. For more information on the rating methodology, please visit [www.standardandpoors.com](http://www.standardandpoors.com) and select 'Understanding Ratings' under Rating Resources on the homepage; [www.moodys.com](http://www.moodys.com) and select 'Rating Methodologies' under Research and Ratings on the homepage; [www.fitchratings.com](http://www.fitchratings.com) and select 'Ratings Definitions' on the homepage.

Class I units are available only to certain investors. See the Program Description for more information.

Diversification does not guarantee a profit or eliminate the risk of loss.

The Bloomberg 3-Month Treasury Bellwether Index measures the performance of treasury bills with maturities of less than three months. An investment cannot be made directly in an index.

The **Crediting rate** is the interest rate earned on the contract value (principal plus accrued income) expressed as an effective annual yield. The crediting rate also acts as a stabilizing mechanism by amortizing investment gains and losses so that participants are protected from short-term changes in market value. The crediting rate is reset monthly and is presented gross of Invesco's management fee, revenue sharing applicable to the various share classes, wrap fees, sub-advisor expenses and administrative expenses. **Effective duration** is a modified duration calculation which incorporates the expected duration-shortening effect of an issuer's embedded call provision.

---

## About risk

### Risks of the Underlying Holding

Fixed-income investments are subject to credit risk of the issuer and the effects of changing interest rates. Interest rate risk refers to the risk that bond prices generally fall as interest rates rise and vice versa. An issuer may be unable to meet interest and/or principal payments, thereby causing its instruments to decrease in value and lowering the issuer's credit rating.

Wrap contract crediting rates may be affected,

positively or negatively, if a large number of participants request redemptions from the portfolio or add new contributions to the portfolio. The portfolio's credited rate will generally lag market interest rates.

There are risks that a wrap contract issuer may default which could result in loss of principal. Cost incurred to buy wrap contracts reduces Portfolio performance. New wrap contracts may have less favorable terms or higher costs. Poor market value

performance may lead to constrained Portfolio investments and reduce performance. Termination of a wrap contract could result in loss of book value coverage.

The portfolio is subject to certain other risks. Please see the current Program Description for more information regarding the risks associated with an investment in the portfolio.
