

Invesco S&P 500 Equal Weight Income Advantage ETF

RSPA

Why invest in this fund

- 1 High and consistent monthly income**
RSPA strives to provide a high and consistent yield from premiums collected from an option income overlay, dividends from stocks in the S&P 500 Equal Weight Index, and interest income.
- 2 Passive equity exposure**
RSPA invests a portion of the portfolio equally in all 500 stocks of the S&P 500 Index, providing investors balanced exposure to the market.
- 3 Lower volatility**
The option income overlay strategy aims to reduce market volatility and downside risk.¹

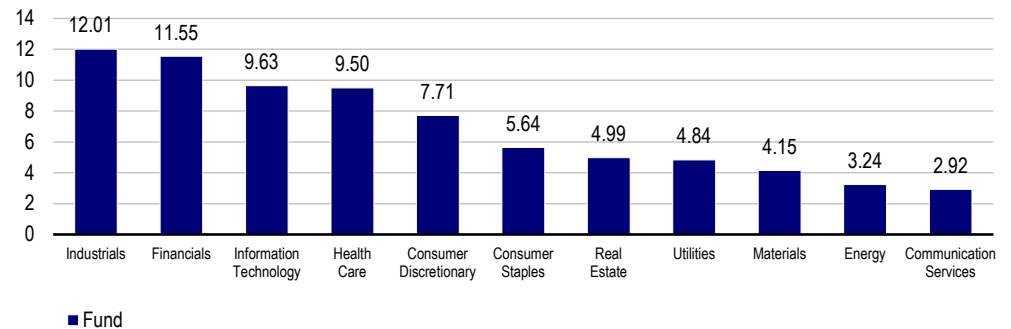

What this fund does

This fund seeks to provide investors exposure to the S&P 500 Equal Weight Index combined with an active option income overlay for income generation, downside protection and upside participation.

This is a new Fund and has no full-year Fund performance to report as of most recent quarter end. **Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times. Performance data quoted represents past performance, which is not a guarantee of future results. Investment returns and principal value will fluctuate, and shares, when redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than performance data quoted. After-tax returns reflect the highest federal income tax rate but exclude state and local taxes. Fund performance reflects applicable fee waivers, absent which, performance data quoted would have been lower. After Tax Held and After Tax Sold are based on NAV. Returns less than one year are cumulative.**

Risk Factors and Other Important Disclosures

The Global Industry Classification Standard was developed by and is the exclusive property and service mark of MSCI, Inc. and Standard & Poor's.

There are risks involved with investing in ETFs, including possible loss of money. Actively managed ETFs do not necessarily seek to replicate the performance of a specified index. Actively managed ETFs are subject to risks similar to stocks, including those related to short selling and margin maintenance. Ordinary brokerage commissions apply. The Fund's return may not match the return of the Index. The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risk associated with an investment in the Fund.

Securities held by the Fund are subject to market fluctuations. You should anticipate that the value of the Shares will decline, more or less, in correlation with any decline in value of the securities in the Fund's portfolio. Additionally, natural or environmental disasters, widespread disease or other public health issues, war, military conflicts, acts of terrorism, economic crises or other events could result in increased premiums or discounts to the Fund's net asset value ("NAV")

The investment techniques and risk analysis used by the portfolio managers may not produce the desired results.

While the Fund is actively managed, a substantial portion of the Fund's portfolio is designed to track the performance of the Index. In managing this portion of the Fund's portfolio, the portfolio managers will not generally buy or sell a security unless that security is added or removed, respectively, from the Index, regardless of the performance of that security. If a specific security is removed from the Index, the Fund may be forced to sell such security at an inopportune time or for a price lower than the security's current market value

In general, equity values fluctuate, sometimes widely, in response to activities specific to the company as well as general market, economic and political conditions.

Investments in ELNs are susceptible to the risks of their underlying instruments, which could include management risk, market risk and, as applicable, foreign securities and currency risks. ELNs are also subject to certain debt securities risks, such as interest rate and credit risks. Should the prices of the underlying instruments move in an unexpected manner, the Fund may not achieve the anticipated benefits of an investment in an ELN, and may realize losses, which could be significant and could include the Fund's entire principal investment. An ELN investment is also subject to counterparty risk, which is the risk that the issuer of the ELN will default or become bankrupt and the Fund may not be repaid the principal amount of, or income from, its investment. ELNs may also be less liquid than more traditional investments and the Fund may be unable to sell ELNs at a desirable time or price. In addition, the price of ELNs may not correlate with the underlying securities or a fixed income investment

Investments focused in a particular industry are subject to greater risk, and are more greatly impacted by market volatility, than more diversified investments.

Derivatives may be more volatile and less liquid than traditional investments and are subject to market, interest rate, credit, leverage, counterparty and management risks. An investment in a derivative could lose more than the cash amount invested.

Risks of futures contracts include: an imperfect correlation between the value of the futures contract and the underlying commodity; possible lack of a liquid secondary market; inability to close a futures contract when desired; losses due to unanticipated market movements; obligation for the Fund to make daily cash payments to maintain its required margin; failure to close a position may result in the Fund receiving an illiquid commodity; and unfavorable execution prices.

A decision as to whether, when and how to use options involves the exercise of skill and judgment and even a well conceived option transaction may be unsuccessful because of market behavior or unexpected events. The prices of options can be highly volatile and the use of options can lower total returns.

Short sales may cause an investor to repurchase a security at a higher price, causing a loss. As there is no limit on how much the price of the security can increase, exposure to potential loss is unlimited.

Because the Fund may invest in other investment companies, it's subject to the risks associated with the investment company and its investment performance may depend on the underlying investment company's performance. The Fund will indirectly pay a proportional share of the investment company's fees and expenses, while continuing to pay its own management fee to the Adviser, resulting in shareholders absorbing duplicate levels of fees.

The Fund is non-diversified and may experience greater volatility than a more diversified investment.

The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

The Fund currently intends to effect creations and redemptions principally for cash, rather than principally in-kind because of the nature of the Fund's investments. As such, investments in the Fund may be less tax efficient than investments in ETFs that create and redeem in-kind.

The Fund is subject to numerous market trading risks, including the potential lack of an active market, losses from trading in secondary markets, and disruption in the creation/redemption process. During stressed market conditions, Shares may become less liquid as result of deteriorating liquidity which could lead to differences in the market price and the underlying value of those Shares.
