

# Invesco New York AMT-Free Municipal Bond ETF

**PZT**

## Fund description

The Invesco New York AMT-Free Municipal Bond ETF (Fund) is based on The ICE BofAML New York Long-Term Core Plus Municipal Securities Index (Index). The Fund generally will invest at least 80% of its total assets in municipal securities that comprise the Index and that also are exempt from the federal alternative minimum tax. The Index is composed of US dollar-denominated, investment grade, tax-exempt debt publicly issued by New York or any US territory, or their political subdivisions, in the US domestic market with a term of at least 15 years remaining to final maturity. The Index is adjusted monthly and its constituents are capitalization-weighted based on their current amount outstanding. The Fund does not purchase all of the securities in the Index; instead, the Fund utilizes a "sampling" methodology to seek to achieve its investment objective. The Fund and the Index are rebalanced and reconstituted monthly.

Returns less than one year are cumulative. Performance data quoted represents past performance. Past performance is not a guarantee of future results; current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and Shares, when redeemed, may be worth more or less than their original cost. See [invesco.com](https://www.invesco.com) to find the most recent month-end performance numbers. Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times. Fund performance reflects fee waivers, absent which, performance data quoted would have been lower.

Index returns do not represent Fund returns. An investor cannot invest directly in an index.

Neither the underlying Index nor the benchmark indexes charge management fees or brokerage expenses, and no such fees or expenses were deducted from the performance shown; nor do any of the indexes lend securities, and no revenues from securities lending were added to the performance shown. In addition, the results actual investors might have achieved would have differed from those shown because of differences in the timing, amounts of their investments, and fees and expenses associated with an investment in the Fund.

The ICE BofAML New York Long-Term Core Plus Municipal Securities Index is composed of US dollar-denominated, investment grade, tax-exempt debt publicly issued by New York or any US territory, or their political subdivisions, in the US domestic market with a term of at least 15 years remaining to final maturity. The Index is adjusted monthly and its constituents are capitalization-weighted based on their current amount outstanding.

The BofA Merrill Lynch New York Insured Long-Term Core Municipal Securities Index is designed to track the performance of US dollar-denominated, investment-grade, insured, tax-exempt debt publicly issued by New York or Puerto Rico or their political subdivisions.

<sup>1</sup>Bloomberg Municipal Bond 20 Year Index is an unmanaged index of municipal bonds with remaining maturities of 17 to 22 years.

**Investment risks**

There are risks involved with investing in ETFs, including possible loss of money. Shares are not actively managed and are subject to risks similar to those of stocks, including those regarding short selling and margin maintenance requirements. Ordinary brokerage commissions apply. The Fund's return may not match the return of the Underlying Index. The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risk associated with an investment in the Fund.

There is no guarantee that the Fund's income will be exempt from federal and state income taxes.

Reinvestment risk is the risk that a bond's cash flows (coupon income and principal repayment) will be reinvested at an interest rate below that on the original bond.

Municipal securities are subject to the risk that legislative or economic conditions could affect an issuer's ability to make payments of principal and/ or interest.

Municipal insurance doesn't protect against losses in the Fund.

Investments focused in a particular industry or sector are subject to greater risk, and are more greatly impacted by market volatility, than more diversified investments.

The Fund currently intends to effect creations and redemptions principally for cash, rather than principally in-kind because of the nature of the Fund's investments. As such, investments in the Fund may be less tax efficient than investments in ETFs that create and redeem in-kind.

The Fund invests a substantial portion of its assets in New York (NY) municipal securities, and will have greater exposure to negative political, economic, regulatory or other factors within the state. Unfavorable developments in any economic sector may have a substantial impact on the overall NY municipal market. Certain issuers of NY municipal bonds have experienced serious financial difficulties in the past, and reoccurrence of these difficulties may impair the ability of such issuers to pay principal or interest on their obligations.

Interest rate risk refers to the risk that bond prices generally fall as interest rates rise and vice versa.

The Fund's use of a representative sampling approach will result in its holding a smaller number of securities than are in the underlying Index, and may be subject to greater volatility.

The Fund is non-diversified and may experience greater volatility than a more diversified investment.

#### **Glossary**

**30 Day SEC Unsubsidized Yield** reflects the 30-day yield if the investment adviser were not waiving all or part of its fee or reimbursing the fund for part of its expenses. Total return would have also been lower in the absence of these temporary reimbursements or waivers.

**30 Day SEC Yield** is based on a 30-day period and is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period.

**Credit ratings** are assigned by Nationally Recognized Statistical Rating Organizations based on assessment of the credit worthiness of the underlying bond issuers. The ratings range from AAA (highest) to D (lowest) and are subject to change. Not rated indicates the debtor was not rated, and should not be interpreted as indicating low quality. Futures and other derivatives are not eligible for assigned credit ratings by any NRSRO and are excluded from quality allocations. For more information on rating methodologies, please visit the following NRSRO websites: [www.standardandpoors.com](http://www.standardandpoors.com) and select 'Understanding Credit Ratings' under Rating Resources 'About Ratings' on the homepage.; [www.ratings.moodys.com](http://www.ratings.moodys.com) and select 'Rating Methodologies' under Research and Ratings on the homepage.

**Effective Duration** is a measure of a bond's sensitivity to interest rate changes that reflects the change in a bond's price given a change in yield. This duration measure is appropriate for bonds with embedded options.

**Intraday NAV** is a symbol representing estimated fair value based on the most recent intraday price of underlying assets.
