## 28 years of seeking quality growth abroad

A long-term investment strategy that seeks high-quality growth opportunities in the international large- and mid-cap universe, across both developed and emerging markets. The fund can serve as a stand-alone international allocation, or as a complement to a more aggressive growth or value-style international manager.

### A world of opportunities

While the US plays an important role on the world economic stage, countries outside the US account for:

#### The Invesco International Growth Fund team

**15** member multinational and multilingual team

**200+** years of combined experience

**20** years' average team tenure for senior portfolio managers

**500** company management interviews annually

#### Quality growth "EQV" investment approach

Bottom-up analysis of each company's "EQV" profile answers three key questions:

<b>E</b>	<b>Earnings</b>	Is earnings growth sustainable?
<b>Q</b>	<b>Quality</b>	Is the company well-managed and financially strong?
<b>V</b>	<b>Valuation</b>	Is the stock attractively valued?

#### Competitive results across varied market conditions

Since inception, the fund has outperformed the benchmark 80 out of 92 quarterly five-year rolling periods<sup>3</sup> with less risk.<sup>4</sup>

3 Source: StyleADVISOR. Performance based on Class A shares at NAV. Data is based on quarterly rolling five-year periods from 6/30/92, closest quarter-end after fund inception, 4/7/92.

4 Source: StyleADVISOR. Data is from 4/30/92, closest month-end following inception of 4/7/92. Volatility as measured by beta versus the Custom Invesco International Growth Index. Beta is a measure of relative risk and the slope of regression.

All data as of 3/31/20, unless otherwise noted. Past performance does not guarantee comparable future results. The Custom Invesco International Growth Index is composed of the MSCI EAFE Growth Index through 2/28/13, and the MSCI All Country (AC) World ex-US Growth Index thereafter. The MSCI EAFE Growth Index is an unmanaged index considered representative of growth stocks of Europe, Australasia and the Far East. The MSCI AC World ex-US Growth Index is a market-capitalization-weighted index that includes growth companies in developed and emerging markets throughout the world, excluding the United States. Both indexes are computed using the net return, which withholds applicable taxes for non-resident investors. An investment cannot be made directly in an index.

**Annual Expense Ratios:** Class A shares (total) 1.33%, Class Y shares (total) 1.08%. See current prospectus for more information.

**Performance quoted is past performance and cannot guarantee comparable future results; current performance may be lower or higher. Visit [invesco.com](https://www.invesco.com) for the most recent month-end performance. Performance figures reflect reinvested distributions and changes in net asset value (NAV). Investment return and principal value will vary so that you may have a gain or loss when you sell shares. Performance shown at NAV does not include applicable front-end sales charges (max. 5.50%), which would have reduced performance. Class Y shares have no sales charge; therefore, performance is at NAV. Fund performance reflects any applicable fee waivers and/or expense reimbursements. Had the adviser not waived fees and/or reimbursed expenses currently or in the past, returns would have been lower. See current prospectus for more information. Index returns do not reflect any fees, expenses, or sales charges. Returns less than one year are cumulative; all others are annualized.**

**About risk:** Derivatives may be more volatile and less liquid than traditional investments and are subject to market, interest rate, credit, leverage, counterparty and management risks. An investment in a derivative could lose more than the cash amount invested. The risks of investing in securities of foreign issuers, including emerging market issuers, can include fluctuations in foreign currencies, political and economic instability, and foreign taxation issues. Growth stocks tend to be more sensitive to changes in their earnings and can be more volatile. Stocks of medium-sized companies tend to be more vulnerable to adverse developments, may be more volatile, and may be illiquid or restricted as to resale. The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risks associated with an investment in the Fund.
