

Invesco Gold & Special Minerals Fund

Q2 2024

Key takeaways

- 1 The fund underperformed its benchmark for the second quarter**

Invesco Gold & Special Minerals Fund Class A shares at net asset value (NAV) lagged its benchmark for the quarter. While several large-cap holdings benefited from strong quarterly operating results, certain Australian producers declined.
- 2 Gold and gold mining equities both climbed for the quarter**

Gold mining equities (represented by the Philadelphia Gold & Silver Index) rose 8.57% in the second quarter. The price of gold ended the quarter at \$2,326, up over 4.00% since the end of the first quarter.
- 3 Gold price rose despite several headwinds**

Gold hit an all-time high in the quarter despite a stronger US dollar and rising US Treasury yields. Factors supporting gold included foreign bank purchases, fear of future dollar weakness due to large US deficits, and anticipated interest rate cuts across the globe.

Investment objective

The fund seeks capital appreciation

Manager perspective and outlook

- Gold mining equities (represented by the Philadelphia Gold & Silver Index) returned 8.57% in the second quarter. Gold's price traded sideways before ending the quarter at \$2,326 per ounce for a gain of 4.30%. Gold mining equities outperformed the S&P 500 Index by 4.29% and the Bloomberg US Aggregate Bond Index by 8.51% in the quarter. In our view, valuations for many precious metals mining stocks appear attractive, with solid cash flows and healthy balance sheets.
- Gold is a hard asset that tends to historically do well in slower growth environments when equities are volatile, geopolitical turmoil is brewing, real interest rates are stable or falling, and/or investors fear weakening currencies. Investors have recently appeared to focus on economic data and US Federal Reserve (Fed) comments that signal potential interest rate cuts later this year.
- Certain factors that have historically supported the gold price have remained in place, including profligate fiscal policies, renewed attention on the US deficit and national debt, low real rates, uneven economic growth and geopolitical turmoil. Other factors could push gold down, including a faster-than-expected end to the wars in Ukraine and Israel, further US dollar strength, accelerating economic growth, rising equities and a shift toward tighter US monetary policy.

Portfolio positioning

We maintain a well-diversified portfolio across precious and other metals, geographic regions and stages of company development. We maintain exposure to a number of Australian companies with what we consider attractive growth prospects, high quality assets, sound balance sheets, strong cash flows and talented management teams. The fund holds a number of earlier stage or pre-production companies with strong growth prospects that we believe could become core positions and meaningful contributors for the fund. We also hold positions in a number of companies that produce future-facing metals, including copper and lithium, both of which we believe should be important for the global effort to meet various net zero carbon initiatives. The majority of the fund consists of well-capitalized intermediate and senior precious metals producers with what we consider attractive growth, cash flow and risk/reward profiles.

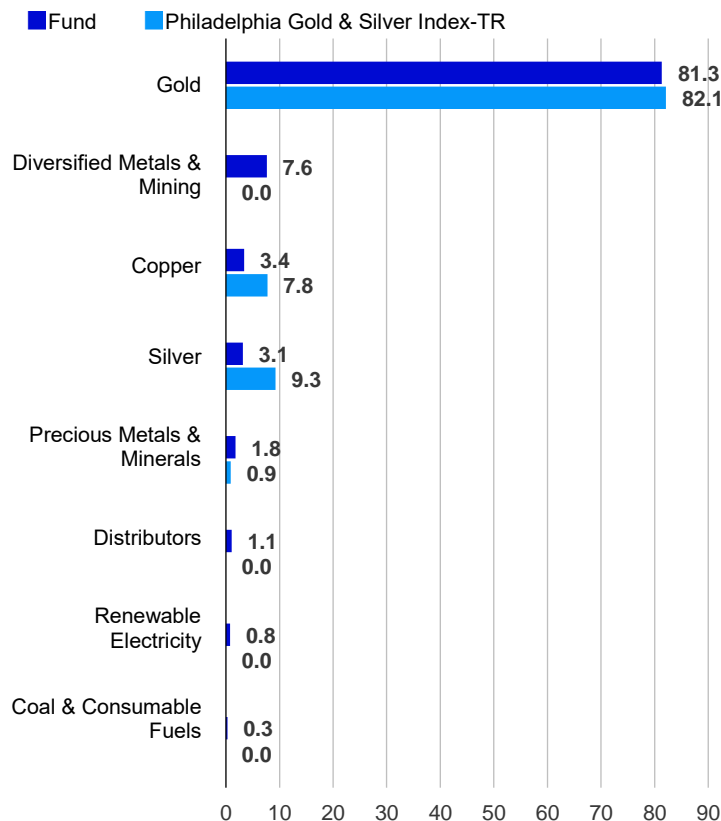

The price of gold hit an all-time high in the second quarter despite headwinds from a stronger US dollar and rising US Treasury yields. Several factors supported gold, including (1) purchases by foreign central banks seeking to diversify their reserves, (2) investor preparation for potential dollar weakness due to persistently large US budget deficits, (3) elevated government spending to fund ongoing wars and expand social programs and (4) expected interest rate cuts by the Fed and other central banks later this year.

We note that gold has performed well relative to other risk assets during the five most recent US recessions dating back to 1981. We believe gold could eventually trade higher from current levels and mining equities could perform well from here, but we do not believe the path will be smooth. Accordingly, we favor a longer term strategic allocation to the fund that allows investors to look beyond high day-to-day volatility of the physical metals and gold mining equities.

Performance highlights

Invesco Gold & Special Minerals Fund Class A shares at net asset value returned 5.71% in the second quarter, underperforming the benchmark return of 8.57%. Within the Philadelphia Gold & Silver Index, mid- and small-cap stocks generally outperformed large-cap and more liquid companies for the quarter.

Several large-cap stocks added to the fund's absolute performance due to strong quarterly operating results, including **Newmont**, **Kinross Gold** and **Agnico Eagle Mines**.

The fund's exposure to certain Australian producers detracted from absolute return

during the quarter. For example, **Northern Star Resources**, **Bellevue Gold** and **De Grey Mining** declined as the Australian dollar appreciated during the quarter.

Contributors to performance

The fund's leading contributors to absolute return for the quarter were **Newmont**, **Kinross Gold** and **Agnico Eagle Mines**.

Detractors from performance

The fund's largest detractors from absolute performance for the quarter were **Northern Star Resources**, **Bellevue Gold** and **De Grey Mining**.

Standardized performance (%) as of June 30, 2024

		Quarter	YTD	1 Year	3 Years	5 Years	10 Years	Since inception

Expense ratios per the current prospectus: Class A: Net: 1.06%, Total: 1.06%; Class R6: Net: 0.66%, Total: 0.66%; Class Y: Net: 0.82%, Total: 0.82%.

Performance quoted is past performance and cannot guarantee comparable future results; current performance may be lower or higher. Visit [invesco.com](https://www.invesco.com) for the most recent month-end performance. Performance figures reflect reinvested distributions and changes in net asset value (NAV). Investment return and principal value will vary so that you may have a gain or a loss when you sell shares. Returns less than one year are cumulative; all others are annualized. As the result of a reorganization on May 24, 2019, the returns of the fund for periods on or prior to May 24, 2019 reflect performance of the Oppenheimer predecessor fund. Share class returns will differ from the predecessor fund due to a change in expenses and sales charges. Index sources: Invesco, RIMES Technologies Corp. Had fees not been waived and/or expenses reimbursed in the past, returns would have been lower. Performance shown at NAV does not include the applicable front-end sales charge, which would have reduced the performance.

Class Y and R6 shares have no sales charge; therefore performance is at NAV. Class Y shares are available only to certain investors. Class R6 shares are closed to most investors. Please see the prospectus for more details.

Holdings are subject to change and are not buy/sell recommendations. Attribution methodology notes: The attribution provides analysis of the effects of several portfolio management decisions, including allocation and security selection. Securities classified as "Other" may include non-equity securities, derivatives, and securities for which a sector classification may not be appropriate. The portfolio is actively managed and portfolio holdings are subject to change. The percentage weights represented for the portfolio are dollar weighted based on market value. **Market allocation effect** shows the excess contribution due to sector/market allocation. A positive allocation effect implies that the choice of sector weights in the portfolio added value to the portfolio contribution with respect to the benchmark and vice versa. **Selection effect** shows the excess contribution due to security selection. A positive selection effect implies that the choice of stocks in the portfolio added value to the portfolio contribution with respect to the benchmark and vice versa. **Total effect** is the difference in contribution between the benchmark and portfolio. **Past performance does not guarantee future results.**

Unless otherwise specified, all information is as of 06/30/24. Unless stated otherwise, Index refers to Philadelphia Gold & Silver Index-TR.

The Philadelphia Gold & Silver Index is composed of gold and silver mining companies traded on the Philadelphia Stock Exchange.

About risk

Derivatives may be more volatile and less liquid than traditional investments and are subject to market, interest rate, credit, leverage, counterparty, and management risks. An investment in a derivative could lose more than the cash amount invested.

In general, stock values fluctuate, sometimes widely, in response to activities specific to the company as well as general market, economic and political conditions.

The risks of investing in securities of foreign issuers, including emerging markets, can include fluctuations in foreign currencies, political and economic instability, and foreign taxation issues.

Fluctuations in the price of gold and precious metals may affect the profitability of companies in the gold and precious metals sector.

The Fund is considered non-diversified and may experience greater volatility than a more diversified investment.

Because the Subsidiary is not registered under the Investment Company Act of 1940, as amended (1940 Act), the Fund, as the sole investor in the Subsidiary, will not have the protections offered to investors in U.S. registered investment companies.

The fund is subject to certain other risks. Please see the current prospectus for more information regarding the risks associated with an investment in the fund.

The opinions expressed are those of the fund's portfolio management, are based on current market conditions and are subject to change without notice. These opinions may differ from those of other Invesco investment professionals.

This does not constitute a recommendation of any investment strategy or product for a particular investor. Investors should consult a financial professional before making any investment decisions.

Note: Not all products available at all firms. Financial professionals, please contact your home office.

The fund holdings are organized according to the Global Industry Classification Standard, which was developed by and is the exclusive property and service mark of MSCI Inc. and Standard & Poor's.

* **Alpha** (cash adjusted) is a measure of performance on a risk-adjusted basis. **Beta** (cash adjusted) is a measure of relative risk and the slope of regression. **Sharpe Ratio** is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe ratio indicates better risk-adjusted performance. **Information Ratio** is a measurement of portfolio returns beyond the returns of a benchmark, usually an index, compared to the volatility of those returns. **Standard deviation** measures a fund's range of total returns and identifies the spread of a fund's short-term fluctuations. **Tracking Error** is defined as the expected standard deviation of a portfolio's excess return over the benchmark index return. The **up and down capture** measures how well a manager was able to replicate or improve on periods of positive benchmark returns and how severely the manager was affected by periods of negative benchmark returns. **Maximum Drawdown** is the maximum observed loss from a high to a low of a portfolio, before a new high is attained. Maximum drawdown is an indicator of downside risk over a specified time period. **Weighted Average Market Cap** is a measure of the average size of company held in a portfolio. The percentage of the portfolio invested each company, or its weight, is multiplied by its size (market capitalization). An average of the weighted size of all companies held is then calculated. **Price/earnings** measures the price per share relative to the earnings per share of the company while excluding extraordinary items. **Price to book** measures the firm's capitalization (market price) to book value. **Est. 3-5 year EPS (Earning per share) growth** measures the earning per share growth from FY3 to FY5. **ROE** is the Return on Equity that measures the fund's annual return relative to total shareholders' equity. This ratio evaluates how quickly investments can be turned into profits. **Long-term debt to capital** measures a fund's financial leverage by calculating the proportion of long-term debt used to finance its assets relative to the amount of equity used for the same purpose. A higher ratio indicates higher leverage. **Operating margin** measures the profit a fund makes for every dollar of sales after paying the variable expenses. **Contribution to Return** measures the performance impact from portfolio holdings over a defined time period. It takes into account both weight and performance of the portfolio holdings. Contribution to Return is calculated at security level.
