

# Invesco Gold & Special Minerals Fund

## Q1 2023

## Key takeaways

### 1 Invesco Gold & Special Minerals Fund outperformed its benchmark

Primary performance drivers for gold and gold mining equities were the US dollar, Treasury yields and shifting expectations for Federal Reserve interest rate policy.

### 2 Gold mining equities experienced a particularly volatile quarter

Gold mining equities (represented by the Philadelphia Gold & Silver Index) were unusually volatile, rising sharply in January and March but falling sharply in February, returning 9.38% in the first quarter, while the gold price rose 7.96%.

### 3 Gold and gold mining equities delivered strong relative performance

Both gold and the gold mining equities performed well relative to most risk assets. For comparison, the S&P 500 Index returned 7.50% and the Bloomberg Barclays US Aggregate Bond Index returned 2.96% for the quarter.

### Investment objective

The fund seeks capital appreciation

### Fund facts

Fund AUM (\$M) 2,010.04

Class R6 shares (OGMIX): Best among 17 Precious Metals Equity Funds for the 3-year period ending 11/30/22 based on consistently strong risk-adjusted performance.

## Manager perspective and outlook

- Gold is a hard asset that tends to do well in slower growth environments when equities are volatile, geopolitical turmoil is brewing, real interest rates are stable or falling, and/or investors fear weakening currencies. Investor focus has shifted to slowing economic growth, regional bank weakness, falling inflation and prospects for an end to the current rate hiking cycle.
- Certain factors that have historically supported the gold price remain in place, including profligate fiscal policies, competitive currency devaluations, historically low real interest rates, slowing economic growth and geopolitical turmoil. However, other factors could put downward pressure on gold, including a faster-than-expected end to the Ukraine war, a rising US dollar, accelerating economic growth, rising equities and a US shift toward even tighter monetary policy.
- We note that gold has performed well relative to other risk assets during the five most recent US recessions dating back to 1981. We believe gold could eventually trade higher from current levels and mining equities could perform well from here, but we do not believe the path will be smooth. Accordingly, we favor a longer term strategic allocation to the fund that allows investors to look beyond high day-to-day volatility of the physical metal and gold mining equities.

Lundin Gold Inc	2.55	0.00
Gold Fields Ltd	2.25	3.82

As of 03/31/23. Holdings are subject to change and are not buy/sell recommendations.

## Portfolio positioning

We maintain a well-balanced portfolio across precious and other metals, geographic regions and stages of company development. Australia's COVID-related labor disruptions have largely resolved, and we maintain exposure to a number of Australian companies with attractive growth prospects, high quality assets, sound balance sheets, strong cash flows and talented management teams. The fund also holds a number of earlier stage or pre-production companies with strong growth prospects that we believe could become meaningful contributors and core positions for the fund. The majority of the portfolio consists of well-capitalized intermediate and senior precious metals producers with attractive growth, cash flow and risk/reward profiles.

MAG Silver Corp.	-18.91	-0.09

## Performance highlights

Invesco Gold & Special Minerals Fund Class A shares at net asset value returned 10.41% in the first quarter, outperforming its benchmark, which returned 9.38%. Large-cap and more liquid companies generally outperformed mid- and small-cap ones during the quarter. The fund outperformed despite the fact that it tends have more exposure to mid- and small-cap stocks than the benchmark.

The fund's exposure to royalty/streaming companies, silver producers and copper producers all contributed to absolute performance in the first quarter. Standout contributors included **Wheaton Precious**

**Metals, Osisko Gold Royalties, SilverCrest Metals** and **Ivanhoe Mines**.

Conversely, the fund's exposure to lithium and rare earth producers detracted from results during the quarter. **Ganfeng Lithium** and **Lynas Rare Earths** were among the largest detractors.

### Contributors to performance:

The fund's leading contributors for the first quarter included **Gold Fields, De Grey Mining** and **Wheaton Precious Metals**.

### Detractors from performance:

The fund's largest detractors for the quarter included **Ganfeng Lithium, Sibanye Stillwater** and **Lynas Rare Earths**.

Expense ratios per the current prospectus: Class A: Net: 1.05%, Total: 1.05%; Class R6: Net: 0.65%, Total: 0.65%; Class Y: Net: 0.81%, Total: 0.81%.

Performance quoted is past performance and cannot guarantee comparable future results; current performance may be lower or higher. Visit [invesco.com](https://www.invesco.com) for the most recent month-end performance. Performance figures reflect reinvested distributions and changes in net asset value (NAV). Investment return and principal value will vary so that you may have a gain or a loss when you sell shares. Returns less than one year are cumulative; all others are annualized. As the result of a reorganization on May 24, 2019, the returns of the fund for periods on or prior to May 24, 2019 reflect performance of the Oppenheimer predecessor fund. Share class returns will differ from the predecessor fund due to a change in expenses and sales charges. Index sources: Invesco, RIMES Technologies Corp. Had fees not been waived and/or expenses reimbursed in the past, returns would have been lower. Performance shown at NAV does not include the applicable front-end sales charge, which would have reduced the performance.

Class Y and R6 shares have no sales charge; therefore performance is at NAV. Class Y shares are available only to certain investors. Class R6 shares are closed to most investors. Please see the prospectus for more details.

Holdings are subject to change and are not buy/sell recommendations. Attribution methodology notes: The attribution provides analysis of the effects of several portfolio management decisions, including allocation and security selection. Securities classified as "Other" may include non-equity securities, derivatives, and securities for which a sector classification may not be appropriate. The portfolio is actively managed and portfolio holdings are subject to change. The percentage weights represented for the portfolio are dollar weighted based on market value. **Market allocation effect** shows the excess contribution due to sector/market allocation. A positive allocation effect implies that the choice of sector weights in the portfolio added value to the portfolio contribution with respect to the benchmark and vice versa. **Selection effect** shows the excess contribution due to security selection. A positive selection effect implies that the choice of stocks in the portfolio added value to the portfolio contribution with respect to the benchmark and vice versa. **Total effect** is the difference in contribution between the benchmark and portfolio. **Past performance does not guarantee future results.**

Unless otherwise specified, all information is as of 03/31/23. Unless stated otherwise, Index refers to Philadelphia Gold & Silver Index-TR.

The Philadelphia Gold & Silver Index is composed of gold and silver mining companies traded on the Philadelphia Stock Exchange.

#### About risk

Derivatives may be more volatile and less liquid than traditional investments and are subject to market, interest rate, credit, leverage, counterparty, and management risks. An investment in a derivative could lose more than the cash amount invested.

In general, stock values fluctuate, sometimes widely, in response to activities specific to the company as well as general market, economic and political conditions.

The risks of investing in securities of foreign issuers, including emerging markets, can include fluctuations in foreign currencies, political and economic instability, and foreign taxation issues.

Fluctuations in the price of gold and precious metals may affect the profitability of companies in the gold and precious metals sector.

The Fund is considered non-diversified and may experience greater volatility than a more diversified investment.

Because the Subsidiary is not registered under the Investment Company Act of 1940, as amended (1940 Act), the Fund, as the sole investor in the Subsidiary, will not have the protections offered to investors in U.S. registered investment companies.

The fund is subject to certain other risks. Please see the current prospectus for more information regarding the risks associated with an investment in the fund.

The opinions expressed are those of the fund's portfolio management, are based on current market conditions and are subject to change without notice. These opinions may differ from those of other Invesco investment professionals.

This does not constitute a recommendation of any investment strategy or product for a particular investor. Investors should consult a financial professional before making any investment decisions.

Note: Not all products available at all firms. Financial professionals, please contact your home office.

The fund holdings are organized according to the Global Industry Classification Standard, which was developed by and is the exclusive property and service mark of MSCI Inc. and Standard & Poor's.

\* **Alpha** (cash adjusted) is a measure of performance on a risk-adjusted basis. **Beta** (cash adjusted) is a measure of relative risk and the slope of regression. **Sharpe Ratio** is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe ratio indicates better risk-adjusted performance. **Standard deviation** measures a fund's range of total returns and identifies the spread of a fund's short-term fluctuations. **Tracking Error** is defined as the expected standard deviation of a portfolio's excess return over the benchmark index return. The **up and down capture** measures how well a manager was able to replicate or improve on periods of positive benchmark returns and how severely the manager was affected by periods of negative benchmark returns. **Weighted Average Market Cap** is a measure of the average size of company held in a portfolio. The percentage of the portfolio invested each company, or its weight, is multiplied by its size (market capitalization). An average of the weighted size of all companies held is then calculated. **Price/earnings** measures the price per share relative to the earnings per share of the company while excluding extraordinary items. **Price to book** measures the firm's capitalization (market price) to book value. **Est. 3-5 year EPS (Earning per share) growth** measures the earning per share growth from FY3 to FY5. **ROE** is the Return on Equity that measures the fund's annual return relative to total shareholders' equity. This ratio evaluates how quickly investments can be turned into profits. **Long-term debt to capital** measures a fund's financial leverage by calculating the proportion of long-term debt used to finance its assets relative to the amount of equity used for the same purpose. A higher ratio indicates higher leverage. **Operating margin** measures the profit a fund makes for every dollar of sales after paying the variable expenses. **Information Ratio** is a measurement of portfolio returns beyond the returns of a benchmark, usually an index, compared to the volatility of those returns. **Maximum Drawdown** is the maximum observed loss from a high to a low of a portfolio, before a new high is attained. Maximum drawdown is an indicator of downside risk over a specified time period. **Contribution to Return** measures the performance impact from portfolio holdings over a defined time period. It takes into account both weight and performance of the portfolio holdings. Contribution to Return is calculated at security level.

Lipper Fund Awards from Refinitiv, ©2023 Refinitiv. All rights reserved. Used under license. The 2023 Lipper Fund Award winners are selected based on consistently strong risk-adjusted returns among funds within a given category. The calculation periods extend over 36, 60, and 120 months. The highest Lipper Leader for Consistent Return (Effective Return) value within each eligible classification determines the fund classification winner over three, five or 10 years. A high Lipper rating does not necessarily imply that a fund had the best total performance or that the fund achieved positive results for that period. Lipper Inc. is a major independent mutual fund tracking organization. Other share classes may have different performance characteristics.
