

Invesco Bloomberg MVP Multi-factor ETF

BMVP

Fund description

The Invesco Bloomberg MVP Multi-factor ETF (Fund) is based on the Bloomberg MVP Index (Index). The Fund will normally invest at least 90% of its total assets in common stocks that comprise the Index. The Index is comprised of U.S. large-cap companies that exhibit strong fundamental characteristics for momentum (M), value (V), volatility (V) and profitability (P). The Index aims to select approximately 50 companies with the strongest momentum, most muted volatility, inexpensive valuations, and highest profitability through an aggregated sector-neutral MVP score. The Fund and the Index are rebalanced and reconstituted quarterly in January, April, July and October.

Returns less than one year are cumulative. Performance data quoted represents past performance. Past performance is not a guarantee of future results; current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and Shares, when redeemed, may be worth more or less than their original cost. See [invesco.com](https://www.invesco.com) to find the most recent month-end performance numbers. Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times. Fund performance reflects fee waivers, absent which, performance data quoted would have been lower.

Index returns do not represent Fund returns. An investor cannot invest directly in an index.

Neither the underlying Index nor the benchmark indexes charge management fees or brokerage expenses, and no such fees or expenses were deducted from the performance shown; nor do any of the indexes lend securities, and no revenues from securities lending were added to the performance shown. In addition, the results actual investors might have achieved would have differed from those shown because of differences in the timing, amounts of their investments, and fees and expenses associated with an investment in the Fund.

Bloomberg MVP Total Return Index aims to select approximately 50 companies with the strongest momentum, most muted volatility, inexpensive valuations, and highest profitability through an aggregated sector-neutral MVP score.

¹The S&P 500® Index is an unmanaged index considered representative of the US stock market.

Investment risks

There are risks involved with investing in ETFs, including possible loss of money. Shares are not actively managed and are subject to risks similar to those of stocks, including those regarding short selling and margin maintenance requirements. Ordinary brokerage commissions apply. The Fund's return may not match the return of the Underlying Index. The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risk associated with an investment in the Fund.

The Fund may engage in frequent trading of its portfolio securities in connection with the rebalancing or adjustment of the Underlying Index.

A value style of investing is subject to the risk that the valuations never improve or that the returns will trail other styles of investing or the overall stock markets.

Momentum style of investing is subject to the risk that the securities may be more volatile than the market as a whole or returns on securities that have previously exhibited price momentum are less than returns on other styles of investing.

Investments focused in a particular sector, such as industrials, are subject to greater risk, and are more greatly impacted by market volatility, than more diversified investments.

The Fund may become "non-diversified," as defined under the Investment Company Act of 1940, as amended, solely as a result of a change in relative market capitalization or index weighting of one or more constituents of the Index. Shareholder approval will not be sought when the Fund crosses from diversified to non-diversified status under such circumstances.

There is no assurance that targeting exposure to certain factors will enhance the performance over time, and targeting exposure to certain factors may detract from performance in some market environments. There are no guarantees the specific factor exposures will be achieved.

Important information

Typically, security classifications used in calculating allocation tables are as of the last trading day of the previous month.

Glossary

30 Day SEC Unsubsidized Yield reflects the 30-day yield if the investment adviser were not waiving all or part of its fee or reimbursing the fund for part of its expenses. Total return would have also been lower in the absence of these temporary reimbursements or waivers.

30 Day SEC Yield is based on a 30-day period and is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period.

Intraday NAV is a symbol representing estimated fair value based on the most recent intraday price of underlying assets.

Weighted Harmonic Average Stock Price-to-Book-Value Ratio (P/B Ratio) is the ratio of a stock's market price to a company's net asset value.

Weighted Harmonic Average Stock Price-to-Earnings Ratio (P/E Ratio) is the share price divided by earnings per share. It is measured on a 12-month trailing basis.

Weighted Average Return on Equity is net income divided by net worth.

Weighted Market Capitalization is the sum of each underlying securities market value.
