Fee-based cash	46144K-83-2
Historical 12 month distribution rate [†] (fee-based)	2.12%

Investors in fee-based accounts will not be assessed the deferred sales charge for eligible fee-based purchases and must purchase units with a Fee-based CUSIP.

[†] The historical 12 month distributions per unit and each historical 12 month distribution rate of the common stocks included in the trust are for illustrative purposes only and are not indicative of the trust's actual distributions or distribution rate. The historical 12 month distributions per unit amount is based upon the weighted average of the actual distributions paid by the common stocks included in the trust over the 12 months preceding the trust's deposit date, and is reduced to account for the effects of fees and expenses which will be incurred when investing in a trust. Each historical 12 month distribution rate is calculated by dividing the historical 12 month distributions amount by the trust's initial \$10 public offering price per unit. There is no guarantee the issuers of the common stocks included in the trust will declare dividends or distributions in the future. The distributions paid by the trust, as well as the corresponding rates, may be higher or lower than the figures shown due to certain factors that may include, but are not limited to, a change in the dividends or distributions paid by issuers, actual expenses incurred, currency fluctuations, the sale of trust securities to pay any deferred sales charges, trust fees and expenses, variations in the trust's per unit price, or with the call, maturity or the sale of securities in the trust. Distributions made by certain securities in the trust may include non-ordinary income.

Objective

The Portfolio seeks to provide income with the potential for limited capital appreciation. The Portfolio seeks to achieve its objective by investing in a portfolio consisting of common stocks of companies ("Covering Securities") derived from the S&P 500 Dividend Aristocrats Index and U.S. Treasury Obligations ("Treasury Obligations"). Each Covering Security is subject to a contractual right, in the form of Long Term Equity Anticipation Securities® ("LEAPS") which gives the holder of the LEAPS the right to buy the corresponding Covering Security at a predetermined price ("strike price") from the Portfolio on any business day prior to the expiration of the LEAPS. The writing (selling) of the LEAPS generates premium income which is used to purchase Treasury Obligations.

Portfolio composition (As of the business day before deposit date)

Communication Services	Financials
AT&T, Inc. T	Aflac, Inc. AFL
Consumer Discretionary	Health Care
Lowe's Companies, Inc. LOW	Abbott Laboratories ABT

About risk

There is no assurance that a unit investment trust will achieve its investment objective. An investment in this unit investment trust is subject to market risk, which is the possibility that the market values of securities owned by the trust will decline and that the value of trust units may therefore be less than what you paid for them. This trust is unmanaged and its portfolio is not intended to change during the trust's life except in limited circumstances. Accordingly, you can lose money investing in this trust. The trust should be considered as part of a long-term investment strategy and you should consider your ability to pursue it by investing in successive trusts, if available. You will realize tax consequences associated with investing from one series to the next.

Common stocks do not assure dividend payments. Dividends are paid only when declared by an issuer's board of directors and the amount of any dividend may vary over time. There can be no guarantee or assurance that companies will declare dividends in the future or that if declared, they will remain at current levels or increase over time.

The financial condition of an issuer may worsen or its credit ratings may drop, resulting in a reduction in the value of your Units. This may occur at any point in time, including during the initial offering period.

You could experience dilution of your investment if the size of the Portfolio is increased as Units are sold. There is no assurance that your investment will maintain its proportionate share in the Portfolio's profits and losses.

Writing LEAPS reduces the value of your Units. As the value of the LEAPS increases, it has a negative impact on the value of your Units. The value of a LEAPS does not increase or decrease at the same rate as the underlying Covering Security.

The Portfolio has limited potential for capital appreciation. As the writer of LEAPS, the Portfolio forgoes the opportunity to profit from increases in the market value of the Covering Securities above the sum of the premium and the strike price of the corresponding LEAPS, but retains the risk of loss should the price of the Covering Securities decline.

The LEAPS may be exercised on any business day prior to their expiration. This may result in the Covering Securities being sold to the option holders of the LEAPS prior to the termination of the Portfolio which could trigger adverse tax consequences.

The Portfolio invests in Treasury Obligations. Treasury Obligations are direct obligations of the United States which are backed by the full faith and credit of the United States. This guarantee does not apply to the market value of the Treasury Obligations or Units of the Portfolio.

The value of the Treasury Obligations will generally fall if interest rates, in general, rise. In a low interest rate environment risks associated with rising rates are heightened. No one can predict whether interest rates will rise or fall in the future.

We do not actively manage the Portfolio. Except in limited circumstances, the Portfolio will hold, and may continue to buy, shares of the same Covering Securities and Treasury Obligations even if their market value declines and will generally hold, and continue to write, the same call options (LEAPS), even if the market value of the Covering Securities increases.

The S&P 500 Dividend Aristocrats Index measures the performance of S&P 500 constituents that have followed a policy of consistently increasing dividends every year for at least 25 consecutive years. It is not possible to invest directly into an index. The portion of the Portfolio composed of common stocks does not replicate all of the components of the S&P 500 Dividend Aristocrats Index or its component weightings.

The Standard & Poor's 500 Index is an unmanaged index generally representative of the U.S. stock market.

Indices are statistical composites and their returns do not include payment of any sales charges or fees an investor would pay to purchase the securities they represent. Such costs would lower performance. It is not possible to invest directly in an index. The historical performance of one or more indices is shown for illustrative purposes only; it is not meant to forecast, imply or guarantee the future performance of any particular investment or the trust, which will vary.

Value, blend and growth are types of investment styles. Growth investing generally seeks stocks that offer the potential for greater-than-average earnings growth, and may entail greater risk than value or blend investing. Value investing generally seeks stocks that may be sound investments but are temporarily out of favor in the marketplace, and may entail less risk than growth investing. A blend investment combines the two styles.

The Portfolio is concentrated in securities issued by companies in the consumer staples sector. Companies that manufacture and distribute consumer products face risks such as intense competition, substantial government regulation, economic recession, and a slowdown in consumer spending trends.

1 Including sales charges. As of deposit date.

2 Represents the value of 100 units on the deposit date. The value of the minimum investment amount of 100 units may be greater or less than \$1,000.00 following the deposit date.

3 The estimated average strike price as a percentage of market price reflects the strike price of each LEAPS multiplied by its market value per contract, divided by the total market value of the common stocks in the portfolio as of the business day before deposit date.

4 Assuming a public offering price of \$10 per unit. There is no initial sales charge if the public offering price per unit is \$10 or less. If the public offering price per unit exceeds \$10, an initial sales charge is paid at the time of purchase. The per unit amount of the initial sales charge is 1.85% of the dollar amount that the public offering price per unit exceeds \$10.
