Why consider investing in Invesco's Energy Portfolio?

With Invesco you gain access to professional security selection. Our experienced investment professionals carefully select among today’s most compelling investment opportunities in the global energy sector.

- The Portfolio may include companies representing a wide range of energy activities including oil and gas exploration and production, oil and gas refining and marketing, and energy equipment and services.
- Some of the world’s leading energy companies are located outside the United States. Although investing in foreign securities entails special risks, this Portfolio includes international investments.

Professional selection

The companies included in the Portfolio were selected for a variety of reasons, including industry position, growth potential and valuation. The Portfolio was constructed to provide diversification among regions, market capitalizations and subindustries within the energy sector.

About risk

There is no assurance the trust will achieve its investment objective. An investment in this unit investment trust is subject to market risk, which is the possibility that the market values of securities owned by the trust will decline and that the value of trust units may therefore be less than what you paid for them. This trust is unmanaged and its portfolio is not intended to change during the trust’s life except in limited circumstances. Accordingly, you can lose money investing in this trust. The trust should be considered as part of a long-term investment strategy and you should consider your ability to pursue it by investing in successive trusts, if available. You will realize tax consequences associated with investing from one series to the next.

A portfolio concentrated in a single market sector presents more risk than a portfolio broadly diversified over several market sectors. The Portfolio is concentrated in securities issued by companies in the energy industry. Companies in the energy industry face risks such as the potential adverse effects of fluctuations in the prices of energy fuels, substantial government regulation, and political conditions in oil producing regions. Negative developments in the energy industry will affect the value of your investment more than would be the case in a more diversified investment.

The Portfolio invests in master limited partnerships (“MLPs”). Most MLPs operate in the energy sector and are subject to the risks generally applicable to companies in that sector, including commodity pricing risk, supply and demand risk, depletion risk and exploration risk. MLPs are also subject to the risk that regulatory or legislative changes could limit or eliminate the tax benefits enjoyed by MLPs which could have a negative impact on the after-tax income available for distribution by the MLPs and/or the value of the Portfolio’s investments.

The financial condition of an issuer may worsen or its credit ratings may drop, resulting in a reduction in the value of your Units. This may occur at any point in time, including during the initial offering period.

You could experience dilution of your investment if the size of the Portfolio is increased as Units are sold. There is no assurance that your investment will maintain its proportionate share in the Portfolio’s profits and losses.

Investing in foreign securities involves certain risks not typically associated with investing solely in the United States. This may magnify volatility due to changes in foreign exchange rates, the political and economic uncertainties in foreign countries, and the potential lack of liquidity, government supervision and regulation.

A security issuer may be unwilling or unable to declare dividends or make other distributions in the future, or may reduce the level of dividends declared. This may reduce the level of income certain of the Portfolio’s securities pay which would reduce your income and may cause the value of your Units to fall.

1 Including sales charges. As of deposit date.
2 Represents the value of 100 units on the deposit date. The value of the minimum investment amount of 100 units may be greater or less than $1,000.00 following the deposit date.
3 Assuming a public offering price of $10 per unit. There is no initial sales charge if the public offering price per unit is $10 or less. If the public offering price per unit exceeds $10, an initial sales charge is paid at the time of purchase. The per unit amount of the initial sales charge is 2.75% of the dollar amount that the public offering price per unit exceeds $10.

Before investing, investors should carefully read the prospectus and consider the investment objectives, risks, charges and expenses. For this and more complete information about the trust, investors should ask their financial professional(s) for a prospectus or download one at invesco.com/uit.

This does not constitute a recommendation of any investment strategy or product for a particular investor. Investors should consult a financial professional before making any investment decisions.

Invesco unit investment trusts are distributed by the Sponsor, Invesco Capital Markets, Inc. and broker dealers including Invesco Distributors, Inc. Both firms are indirect, wholly owned subsidiaries of Invesco Ltd.
