

Invesco Flexible Income ETF

FLXI

Fund description

The Fund is an actively managed exchange-traded fund ("ETF") that seeks to achieve its investment objective by investing under normal conditions in a multi-sector portfolio of fixed income securities. Fixed income securities include bonds, debt securities and other similar instruments issued by various U.S. and non-U.S. corporate and government issuers.

Returns less than one year are cumulative. Performance data quoted represents past performance. Past performance is not a guarantee of future results; current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and Shares, when redeemed, may be worth more or less than their original cost. See [invesco.com](https://www.invesco.com) to find the most recent month-end performance numbers. Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times.

Fund inception: February 25, 2026

Not a Deposit Not FDIC Insured Not Guaranteed by the Bank May Lose Value Not Insured by any Federal Government Agency

Shares are not individually redeemable. Shares may be acquired from the Fund and tendered for redemption to the Fund in Creation and Redemption Units only, typically consisting of 150,000 Shares.

Index returns do not represent Fund returns. An investor cannot invest directly in an index.

Neither the underlying Index nor the benchmark indexes charge management fees or brokerage expenses, and no such fees or expenses were deducted from the performance shown; nor do any of the indexes lend securities, and no revenues from securities lending were added to the performance shown. In addition, the results actual investors might have achieved would have differed from those shown because of differences in the timing, amounts of their investments, and fees and expenses associated with an investment in the Fund.

¹The Bloomberg US Aggregate Bond Index is an unmanaged index considered representative of the U.S. investment-grade, fixedrate bond market.

Investment risks

There are risks involved with investing in ETFs, including the possible loss of money. Actively managed ETFs do not necessarily seek to replicate the performance of a specified index and are subject to risks similar to stocks, including those related to short selling and margin maintenance. Ordinary brokerage commissions apply. The Fund's return may not match the return of the Index. Please see the current prospectus for additional information regarding risks associated with an investment in the Fund.

The investment techniques and risk analysis used by portfolio managers may not produce the desired results.

Fixed-income investments are subject to credit risk and the effects of changing interest rates. Bond prices generally fall as interest rates rise and may increase when interest rates decline. High-yield "junk" bonds involve a greater risk of default or price volatility than higher-quality bonds.

Changes in monetary policy, including increases in interest rates by the Federal Reserve Board or foreign central banks, may increase volatility and reduce liquidity in fixed-income markets, particularly for securities with longer maturities. Issuers may be unable or unwilling to meet interest or principal obligations, which may negatively affect the value of their securities.

Income generated by the Fund depends primarily on prevailing interest rates. If rates fall, the Fund's income may decline.

Obligations issued by U.S. government agencies and instrumentalities may receive varying levels of support from the U.S. government, which could affect the Fund's recovery prospects in the event of a default.

Mortgage- and asset-backed securities are subject to prepayment, reinvestment, and extension risks, as well as the potential for unexpectedly high default rates in underlying mortgage pools. The risk profile depends on the quality of the underlying collateral and the creditworthiness of the issuer or guarantor.

Certain government agency securities, such as those issued by Fannie Mae and Freddie Mac, are backed only by the issuer's creditworthiness and not by the full faith and credit of the U.S. government.

Collateralized Debt Obligations (CDOs) may be highly leveraged, and their risks depend on the quality of the underlying collateral and the tranche's priority of payments. Synthetic CDOs may introduce additional derivative and counterparty risks.

Contingent convertible securities may experience canceled interest payments, subordination to other creditors, conversion from debt to equity, or partial or total principal write-downs, and are also subject to general fixed-income risks, including interest rate, credit, market, and liquidity risk.

To-Be-Announced (TBA) transactions involve the risk that delivered securities may be less favorable than anticipated or that a counterparty may fail to deliver, resulting in potential losses.

Derivatives may be more volatile and less liquid than traditional investments and may involve market, interest rate, credit, leverage, counterparty, and management risks. Losses may exceed the amount invested due to leverage.

Options involve volatility and may reduce returns if market movements differ from expectations. Swaps expose the Fund to credit and counterparty risk. Futures contracts involve imperfect correlation to underlying assets, potential illiquidity, and margin requirements.

Structured Notes may be less liquid and more volatile than the underlying reference assets, and the Fund may experience losses if issuers default or if positions cannot be closed without incurring losses.

Forward foreign currency contracts used to lock in the U.S. dollar value of foreign-currency-denominated securities or hedge currency exposure may not perform as expected if currency movements do not align with changes in the value of the Fund's holdings. Such mismatches, unanticipated currency changes, and counterparty defaults may result in losses or reduced performance.

Leverage created through borrowing or certain transactions may impair liquidity, increase volatility, or lead to losses exceeding the amount invested.

Investing in foreign and emerging-market securities involves risks related to currency fluctuations, political and economic instability, and foreign taxation.

Sovereign debt carries the risk that issuers or governmental authorities may be unwilling or unable to meet repayment obligations. Sovereign borrowers may restructure or delay repayment, reducing the value of affected securities.

The value of foreign investments will be influenced by changes in exchange rates.

If interest rates fall, issuers may call or prepay securities, requiring the Fund to reinvest proceeds at lower interest rates, which may reduce the Fund's income.

Restricted securities may be illiquid and carry significant business, financial, and liquidity risks.

The Fund may engage in active and frequent trading to reflect the rebalancing of the Index.

Important information

The Global Industry Classification Standard was developed by and is the exclusive property and a service mark of MSCI, Inc. and Standard & Poor's.

This does not constitute a recommendation of any investment strategy or product for a particular investor. Investors should consult a financial professional before making any investment decisions.

Before investing, investors should carefully read the prospectus and consider the investment objectives, risks, charges and expenses. For this and more complete information about the fund, investors should ask their financial professionals for a prospectus or download one at invesco.com

Glossary

A credit rating is an assessment provided by a nationally recognized statistical rating organization (NRSRO) of the creditworthiness of an issuer with respect to debt obligations, including specific securities, money market instruments or other debts. Ratings are measured on a scale that generally ranges from AAA (highest) to D (lowest); ratings are subject to change without notice. NR indicates the debtor was not rated and should not be interpreted as indicating low quality. For more information on rating methodologies, please visit the following NRSRO websites: www.spglobal.com and select 'Understanding Credit Ratings' under Rating Resources 'About Ratings' on the homepage.; <https://ratings.moodys.io/ratings> and select 'Understanding Ratings' on the homepage.; <https://www.fitchratings.com> and select 'Ratings Definitions Criteria' under 'Resources' on the homepage. Then select 'Rating Definitions' under 'Resources' on the 'Contents' menu.

30 Day SEC Unsubsidized Yield reflects the 30-day yield if the investment adviser were not waiving all or part of its fee or reimbursing the fund for part of its expenses during the period as defined by the guidelines, where applicable, referenced in the current prospectus. Total return would have also been lower in the absence of these temporary reimbursements or waivers.

30 Day SEC Yield is based on a 30-day period and is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period.

Effective Duration is a measure of a bond's sensitivity to interest rate changes that reflects the change in a bond's price given a change in yield. This duration measure is appropriate for bonds with embedded options
