Market overview

- + In the third quarter of 2019, the high-yield market delivered a positive return, largely due to the tailwind of lower government rates as yield spreads between high-yield and Treasuries widened slightly during the quarter.
- + The high-yield market, as represented by Bloomberg Barclays US Corporate High Yield 2% Issuer Cap Index, returned 1.33% in the third quarter.
- + Most sectors posted positive returns, led by broadcasting (3.2%) and housing (3.2%). However, energy lagged significantly (-5.0%). By rating, the highest quality issuers had the strongest return.
- + During the third quarter, there were six defaults in the high-yield market, amounting to \$14 billion. The trailing 12-month default rate ended the quarter at 2.5%, which is below its historic average of about 3.0%. High-yield mutual funds experienced inflows of \$2.8 billion in the third quarter and \$15 billion in the first nine months of the year, compared to \$47 billion in outflows for the full year 2018. The new issue market recorded \$68 billion in new deals, a small decrease from the second quarter.

Positioning and outlook

- + Investors continue to quickly absorb new issue supply, especially for those companies with low leverage, strong free cash flow and exposure to growing revenue streams. Despite strong appetite for new issues, the amount of private equity sponsored leveraged buyout debt has been subdued. Given recent underperformance of the CCC-rated segment of the high-yield market, we expect some investors to avoid new deals with higher leverage profiles. In our view, the main risk for the market continues to be slowing global growth.
- + A US growth deceleration that settles into the 2% area should still be enough to preserve the favorable fundamental backdrop the high-yield market has been experiencing. One benefit of slower growth is that management teams tend to focus more on balance sheets, which is positive for creditors. Macro concerns also include the risk of a policy error by the Federal Reserve or European Central Bank and China's growth-related challenges. At the sector level, we expect to see positive catalysts for the cable and wireless sectors as industry consolidation continues. On the flip side, we see poor relative value in the technology sector, a sluggish revenue outlook for packaging companies, and secular challenges for the wireline industry.

Performance highlights

- + Invesco High Yield Fund Class A shares at net asset value (NAV) posted a return of 0.72% for the third quarter of 2019, compared to its benchmark index, which returned 1.33%. (Please see the investment results table on page 2 for fund and index performance.)

Contributors to performance

- + During the quarter, the fund's underweight in the oil field services sector aided relative performance.
- + Security selection in the pharmaceuticals and aerospace/defense sectors positively affected relative results as the fund's holdings outperformed those in the index.
- + In terms of individual issuers, **Chesapeake Energy**, **Transdigm** and **Albertsons** added to relative performance (0.00%, 1.44% and 1.14% of total net assets, respectively).

Detractors from performance

- + During the quarter, the largest allocation-related detractor was the fund's overweight in the independent energy sector.
- + Security selection in the oil field services and wirelines sectors detracted from relative results as the fund's holdings underperformed those in the benchmark.
- + In terms of individual issuers, holdings in **Whiting Petroleum**, **Rayonier Am Products** and **Antero Midstream Partners LP** (0.42%, 0.28% and 0.50% of total net assets, respectively) detracted.

Performance quoted is past performance and cannot guarantee comparable future results; current performance may be lower or higher. Visit invesco.com/performance for the most recent month-end performance.

Performance figures reflect reinvested distributions and changes in net asset value (NAV). Investment return and principal value will vary, and you may have a gain or a loss when you sell shares. No contingent deferred sales charge (CDSC) will be imposed on redemptions of Class C shares following one year from the date shares were purchased. Performance shown at NAV does not include applicable CDSC or front-end sales charges, which would have reduced the performance. The Investor Class shares have no sales charge; therefore, performance is at NAV. Class Y shares have no sales charge; therefore, performance is at NAV. Returns less than one year are cumulative; all others are annualized. Fund performance reflects any applicable fee waivers and/or expense reimbursements. Had the adviser not waived fees and/or reimbursed expenses currently or in the past, returns would have been lower. See current prospectus for more information. Index returns do not reflect any fees, expenses, or sales charges.

1 Ratings source: Standard & Poor's. A credit rating is an assessment provided by a nationally recognized statistical rating organization (NRSRO) of the creditworthiness of an issuer with respect to debt obligations, including specific securities, money market instruments or other debts. Ratings are measured on a scale that generally ranges from AAA (highest) to D (lowest); ratings are subject to change without notice. Not Rated indicates the debtor was not rated and should not be interpreted as indicating low quality. A negative in Cash indicates fund activity that has accrued or is pending settlement. For more information on Standard and Poor's rating methodology, please visit www.standardandpoors.com and select 'Understanding Ratings' under Rating Resources on the homepage.

Class Y shares and Investor Class shares are available only to certain investors. See the prospectus for more information.

The fund holdings are organized according to the Global Industry Classification Standard, which was developed by and is the exclusive property and service mark of MSCI Inc. and Standard & Poor's.

The Bloomberg Barclays U.S. Corporate High Yield 2% Issuer Cap Index is an unmanaged index that covers U.S. corporate, fixed-rate, non-investment grade debt with at least one year to maturity and \$150 million in par outstanding. Index weights for each issuer are capped at 2%. An investment cannot be made directly in an index.

Effective duration is a modified duration calculation which incorporates the expected duration-shortening effect of an issuer's embedded call provision. **Weighted average effective maturity (WAM)** is a measure, as estimated by the fund's portfolio managers, of the length of time the average security in a bond fund will mature or be redeemed by its issuer. It takes into account mortgage prepayments, puts, adjustable coupons and potential call dates.

About risk

An issuer may be unable to meet interest and/or principal payments, thereby causing its instruments to decrease in value and lowering the issuer's credit rating.

Derivatives may be more volatile and less liquid than traditional investments and are subject to market, interest rate, credit, leverage, counterparty and management risks. An investment in a derivative could lose more than the cash amount invested.

The risks of investing in securities of foreign issuers can include fluctuations in foreign currencies, political and economic instability, and foreign taxation issues.

Junk bonds have greater risk of default or price changes due to changes in the issuer's credit quality. Junk bond values fluctuate more than high quality bonds and can decline significantly over a short time.

Interest rate risk refers to the risk that bond prices generally fall as interest rates rise and vice versa.

The fund is subject to certain other risks. Please see the current prospectus for more information regarding the risks associated with an investment in the fund.

NOT FDIC INSURED | MAY LOSE VALUE | NO BANK GUARANTEE

Before investing, investors should carefully read the prospectus and/or summary prospectus and carefully consider the investment objectives, risks, charges and expenses.
