

# Invesco Global Allocation Fund

## Quarterly Performance Commentary

Mutual Fund Retail Share Classes  
Data as of June 30, 2024

---

### Investment objective

The fund seeks total return.

---

### Portfolio management

Jeffrey Bennett, Alessio de Longis

---

### Fund facts

Total Net Assets	\$1,048,428,864
Total Number of Holdings	285

Not a deposit; Not FDIC insured; Not guaranteed by the bank; May lose value; Not insured by any federal agency

---

### Market overview

- + Global economic growth broadly accelerated in the second quarter, driven by expansion in services activity. However, there was some divergence between growth across countries and regions. European and UK economies experienced positive economic surprises, while growth momentum in the US economy began to moderate later in the quarter. Some cracks appear to have started to form for US consumers, including an increase in unemployment and a rise in credit card delinquencies. Similarly, Canadian consumers appear to be under pressure, with signs of labor market softening.
- + The second quarter saw more monetary policy easing, including two G7 central banks - the Bank of Canada and the European Central Bank - starting to cut rates. Other central banks appear poised to begin rate cuts before the end of the third quarter.
- + The second quarter was a strong one for global equities, with few exceptions. Some major indexes reached new highs during the quarter. Global equities, as represented by the MSCI World Index, posted a solid gain for the second quarter, resulting in a double-digit gain for the first half of 2024. The US was a standout, with the S&P 500 Index returning 15.29% for the first half of the year.

---

### Positioning and outlook

- + As supply and demand factors in Western developed economies come into better alignment over time, we believe inflation will fall toward central bank targets and economies will gradually return to trend growth, aided by central bank interest rate cuts.
- + We anticipate near-term volatility as markets react to shifts in the interest rate outlook, particularly due to any supporting or conflicting data released along the way. In our view, the precise number of rate cuts is less important at this stage than the timing of them. There could also be significant risk that some markets may be overly positive and may not have fully priced in potential problems.
- + Because we believe global economic growth is likely to improve, we favor cyclical and small-cap equities due to their relatively attractive valuations and greater sensitivity to economic cycles. We prefer developed non-US and emerging market equities for the same reasons. As central banks cut rates, we think lower discount rates will also support valuations.

---

### Performance highlights

- + Invesco Global Allocation Fund Class A shares at net asset value (NAV) had a negative return and underperformed its style-specific benchmark, the Custom Invesco Global Allocation Index, in the second quarter. (Please see the investment results table on page 2 for fund and index performance.)
- + The majority of the investment team's global macro regime framework remained in an 'Expansion' position for the entire quarter. Within equities, the fund skewed toward smaller cap and value equities. In fixed income, it skewed toward US fixed income and away from international fixed income, relative to the benchmark.
- + Compared to its benchmark, the fund also had greater exposure to high-yield fixed income and emerging market equities during the quarter.

### Contributors to performance

- + From a top-down allocation perspective, the primary contributor to absolute return was the position in emerging market equities.
- + From a bottom-up security selection perspective, the primary contributor was insurance-linked fixed income strategies.

### Detractors from performance

- + From a top-down allocation perspective, the primary detractor from absolute return was the allocation to factor-based, tactical US large-cap equity strategies.
- + From a bottom-up security selection perspective, detractors from absolute return included selection within international growth and emerging market equities.

Fund holdings	% of total net assets
Invesco Russell 1000 Dynamic Multifactor ETF	20.79
Invesco International Developed Dynamic Multifactor ETF	13.75
United States Treasury Note/Bond 1.875 Feb 15 2032	13.74
iShares iBoxx High Yield Corporate Bond ETF	6.78
United States Treasury Note/Bond 3.875 Dec 31 2029	6.38

Performance quoted is past performance and cannot guarantee comparable future results; current performance may be lower or higher. Visit [invesco.com/performance](https://www.invesco.com/performance) for the most recent month-end performance. Performance figures reflect reinvested distributions and changes in net asset value (NAV). Investment return and principal value will vary, and you may have a gain or a loss when you sell shares. No contingent deferred sales charge (CDSC) will be imposed on redemptions of Class C shares following one year from the date shares were purchased. Performance shown at NAV does not include applicable CDSC or front-end sales charges, which would have reduced the performance. Class Y shares have no sales charge; therefore, performance is at NAV. Returns less than one year are cumulative; all others are annualized. Fund performance reflects any applicable fee waivers and/or expense reimbursements. Had the adviser not waived fees and/or reimbursed expenses currently or in the past, returns would have been lower. See current prospectus for more information. Index returns do not reflect any fees, expenses, or sales charges. As the result of a reorganization on May 24, 2019, the returns of the fund for periods on or prior to May 24, 2019 reflect performance of the Oppenheimer predecessor fund. Share class returns will differ from the predecessor fund due to a change in expenses and sales charges.

## About risk

Alternative products typically hold more non-traditional investments and employ more complex trading strategies, including hedging and leveraging through derivatives, short selling and opportunistic strategies that change with market conditions. Investors considering alternatives should be aware of their unique characteristics and additional risks from the strategies they use. Like all investments, performance will fluctuate. You can lose money.

Commodities may subject an investor to greater volatility than traditional securities such as stocks and bonds and can fluctuate significantly based on weather, political, tax, and other regulatory and market developments.

Debt securities are affected by changing interest rates and changes in their effective maturities and credit quality.

Derivatives may be more volatile and less liquid than traditional investments and are subject to market, interest rate, credit, leverage, counterparty and management risks. An investment in a derivative could lose more than the cash amount invested. These risks are greater for the fund than most other funds because its investment strategy is implemented primarily through derivatives rather than direct investments in more traditional securities.

Stock and other equity securities values fluctuate in response to activities specific to the company as well as general market, economic and political conditions.

The risks of investing in securities of foreign issuers, including emerging markets, can include fluctuations in foreign currencies, political and economic instability, and foreign taxation issues.

The fund is subject to the risks of the underlying funds. Market fluctuations may change the target weightings in the underlying funds and certain factors may cause the fund to withdraw its investments therein at a disadvantageous time.

Leverage created from borrowing or certain types of transactions or instruments may impair liquidity, cause positions to be liquidated at an unfavorable time, lose more than the amount invested, or increase volatility.

Short sales may cause an investor to repurchase a security at a higher price, causing a loss. As there is no limit on how much the price of the security can increase, exposure to potential loss is unlimited.

Stocks of small and mid-sized companies tend to be more vulnerable to adverse developments, may be more volatile, and may be illiquid or restricted as to resale.

The fund may invest in derivatives either directly or, in certain instances, indirectly through Invesco Cayman Commodity Fund VII Ltd., a wholly owned subsidiary of the fund organized under the laws of the Cayman Islands (Subsidiary). Because the Subsidiary is not registered under the Investment Company Act of 1940, as amended (1940 Act), the fund, as the sole investor in the Subsidiary, will not have the protections offered to investors in U.S. registered investment companies.

Underlying investments may appreciate or decrease significantly in value over short periods of time and cause share values to experience significant volatility over short periods of time.

The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risks associated with an investment in the Fund.

***Before investing, investors should carefully read the prospectus and/or summary prospectus and carefully consider the investment objectives, risks, charges and expenses.
