Gross performance has been calculated before the deduction of investment management and client service fees, but after the deduction of all other expenses applicable to the unit class. Net performance has been calculated after the deduction of all fees and expenses applicable to the unit class as well as a hypothetical management fee of 0.07%.

Total return assumes reinvestment of dividends and capital gains for the periods indicated. Past performance is no guarantee of future results. Investment return and principal value will vary and you may have a gain or loss when you sell shares. Returns less than one year are cumulative; all others are annualized.

Fees and Expenses

| | |
|-----------------------------------|--------------|
| Management Fee | N/A |
| Annual Fund Operating Expenses | 0.10% |
| Total Annual Expense Ratio | 0.10% |

The investment management fee, which may include client service fees, varies for each Plan based on the fee negotiated with the Plan. This negotiated fee can fluctuate daily based on the various asset level break-points reached at the time the daily fee accrual is calculated for each Plan. Therefore, management fees and optional client service fees are not reflected in fact sheets.

Contact your Plan Sponsor to find out the management fee schedule in effect for your retirement plan.

Fund Operating Expenses are unaudited and subject to change. Operating expenses are borne directly by the fund for operation and administration.

Word about risk

Some of the principal risks associated with investing in this Fund include:

In general, stock values fluctuate, sometimes widely, in response to activities specific to the company as well as general market, economic and political conditions.

The Fund is passively managed, and it does not attempt to manage volatility or take defensive positions in declining markets. As result, the Fund may be subject to greater losses than actively managed funds. Certain factors may cause the Fund to track its target index less closely. The Fund will generally reflect the performance of its target index even if the index does not perform well, and may underperform the index after factoring in fees, expenses and other costs.

Stocks of small and mid-sized companies tend to be more vulnerable to adverse developments, may be more volatile, and may be illiquid or restricted as to resale.

The risks of investing in securities of foreign issuers, including emerging market issuers, can include fluctuations in foreign currencies, political and economic instability, and foreign taxation issues. Securities lending could lead to a loss in the fund if the borrower fails to return the securities in a timely manner, which may force the Fund to sell the collateral and purchase a replacement security in the market at a disadvantageous time.

The performance of an investment concentrated in a certain region or country is expected to be closely tied to conditions within that region and to be more volatile than more geographically diversified investments.

Derivatives may be more volatile and less liquid than traditional investments and are subject to market, interest rate, credit, leverage, counterparty and management risks. An investment in a derivative could lose more than the cash amount invested.

The Fund's use of a representative sampling approach will result in it holding a smaller number of securities than are in the Index and in holding securities not included in the Index. As a result, underperformance of securities held by the Fund could result in a greater decline in NAV than would be the case if all of the securities in the Index were held, and the Fund may not track the return of the Index as well as it would have if it held all of the securities in the Index.

The Fund is subject to certain other risks. Please see the Declaration of Trust for more information regarding the risks associated with an investment in the Fund.
